Developer's Guide to Social Programming Mark D. Hawker, 2010-08-09 In *The Developer's Guide to Social Programming*, Mark Hawker shows developers how to build applications that integrate with the major social networking sites. Unlike competitive books that focus on a single social media platform, this book covers all three leading platforms: Facebook, OpenSocial, and Twitter. Hawker identifies the characteristics of superior, highly engaging social media applications, and shows how to use the Facebook platform, Google Friend Connect, and the Twitter API to create them. You'll find practical solutions and code for addressing many common social programming challenges, from site registration to search, blog commenting to creating location-based applications. Hawker concludes by walking you through building a complete, integrated social application: one that works seamlessly across all leading platforms, and draws on powerful features from each. Coverage includes Working with the Twitter API, including the Search API, Lists API, and Retweets API Authenticating users with Twitter OAuth Mastering the Facebook API, FQL, and XFBML Utilizing the Facebook JavaScript Library for creating dynamic content, and animation Exploring the Google Friend Connect JavaScript API, and integrating with the OpenSocial API Using Facebook's tools for sharing, social commenting, stream publishing, and live conversation Using the PHP OpenSocial Client Library with Google Friend Connect Creating, testing, and submitting Google Friend Connect gadgets

An Empirical Study of Residential Developer Bankruptcies in the United States 2007-2008 Pei Yee Woo, 2010 With falling home prices and home foreclosures currently acknowledged as a severe problem in the U.S., more attention needs to be paid to the contributing phenomenon of residential developers undergoing liquidation, which has left behind a trail of partially-completed or abandoned properties. This dissertation presents the results of an empirical investigation aimed at understanding this phenomenon. Specifically, we addressed the following research questions: How have the Chapter 11 bankruptcy cases of residential developers and home builders during this downturn been resolved? How did the actions taken by secured lenders in the course of bankruptcy proceedings shape the resolution outcome? To what extent was bank behavior during these bankruptcies affected and constrained by the banking regulatory framework and culture? This dissertation research involves the analysis of more than 200 residential developers that filed Chapter 11 bankruptcy petitions between November 2007 and December 2008. The main finding is that only a small minority of these developers confirmed a reorganization plan. The majority of the cases were dismissed or converted to Chapter 7, culminating in foreclosure or liquidation. Over 70% of the cases showed at least one instance where a secured lender sought lift-stay motions to pursue foreclosure. Among such cases, orders granting the lift-stay motions were granted most of the time. Investigating this insistence on quick foreclosure, more nuanced views of banks' lending functions, risk management and their regulatory environment are explored through a study of FDIC data, interviews with industry participants and banks' comment letters. A key finding is that, during a

recession, banks may have a preference for liquidation in bankruptcy because of capital shortfalls and procyclical regulatory pressure to reduce portfolio concentrations, particularly in real estate lending. This would be inconsistent with theories that secured lenders will choose economically optimal outcomes within a bankruptcy case, as they may choose outcomes that are sub-optimal within a bankruptcy to maximize an exogenous urgent need for capital.

Suburban Gridlock Robert Cervero,2017-09-04 Robert Cervero documents the rise in suburban traffic around the country and examines the role of various planning, design, and management approaches in defining the automobile's growing presence in suburbia. The book highlights suburban business complexes and mixed-use centers throughout the United States that have been planned and designed to reduce auto dependency and to promote ridesharing, transit usage, and other commuting alternatives.Steps taken by various municipalities to enlist the support of private interests in reducing employee trip-making and financing area-wide roadway improvements are also examined. While the analysis is national in scope, detailed case studies offer in-depth insights into the many institutional and logistical problems involved in mitigating the impact of suburban congestion.The transportation planning profession has historically focused its attention and resources on downtown access and mobility problems. Suburbs, and places beyond, have long been considered havens for travel, free from traffic jams, and ideal for leisurely weekend excursions. Over the years, transportation planning in suburbia has involved little more than adding new projects to five-year capital improvement programs. This book remains essential for planners, administrators, and citizens interested in the future of suburbia and safeguarding it from the coming transportation crisis.

How Real Estate Developers Think Peter Hendee Brown,2015-04-07 Cities are always changing: streets, infrastructure, public spaces, and buildings are constantly being built, improved, demolished, and replaced. But even when a new project is designed to improve a community, neighborhood residents often find themselves at odds with the real estate developer who proposes it. Savvy developers are willing to work with residents to allay their concerns and gain public support, but at the same time, a real estate development is a business venture financed by private investors

who take significant risks. In *How Real Estate Developers Think*, Peter Hendee Brown explains the interests, motives, and actions of real estate developers, using case studies to show how the basic principles of development remain the same everywhere even as practices vary based on climate, local culture, and geography. An understanding of what developers do and why they do it will help community members, elected officials, and others participate more productively in the development process in their own communities. Based on interviews with over a hundred people involved in the real estate development business in Chicago, Miami, Portland (Oregon), and the Twin Cities of Minneapolis and St. Paul, *How Real Estate Developers Think* considers developers from three different perspectives. Brown profiles the careers of individual developers to illustrate the character of the entrepreneur, considers the roles played by innovation, design, marketing, and sales in the production of real estate, and examines the risks and rewards that motivate developers as people. Ultimately, *How Real Estate Developers Think* portrays developers as creative visionaries who are able to imagine future possibilities for our cities and communities and shows that understanding them will lead to better outcomes for neighbors, communities, and cities.
