William Wordsworth

**Soft Targets** Deborah Landau, 2019-06-18 Starred Review in Publishers Weekly: Through the cadence of these poems, which sometimes resemble lullabies in their dreaminess and gorgeous lyricism, Landau captures the ways humans persist, despite our collective anxiety, in our longing for 'something tender, something that might bloom.'" Deborah Landau's fourth book of poetry, *Soft Targets*, draws a bullseye on humanity's vulnerable flesh and corrupted world. In this ambitious lyric sequence, the speaker's fear of annihilation expands beyond the self to an imperiled planet on which all inhabitants are "soft targets." Her melancholic examinations recall life's uncanny ability to transform ordinary places—subways, cafes, street corners—into sites of intense significance that weigh heavily on the modern mind. "O you who want to slaughter us, we'll be dead soon/enough what's the rush," Landau writes, contemplating a world beset by political tumult, random violence, terror attacks, and climate change. Still there are the ordinary and abundant pleasures of day-to-day living, though the tender exchanges of friendship and love play out against a backdrop of 21st century threats with historical echoes, as neo-Nazis marching in the United States recall her grandmother's flight from Nazi Germany.

**String Theory Methods for Condensed Matter Physics** Horatiu Nastase, 2017-09-21 The discovery of a duality between Anti-de Sitter spaces (AdS) and Conformal Field Theories (CFT) has led to major advances in our understanding of quantum field theory and quantum gravity. String theory methods and AdS/CFT correspondence maps provide new ways to think about difficult condensed matter problems. String theory methods based on the AdS/CFT correspondence allow us to transform problems so they have weak interactions and can be solved more easily. They can also help map problems to different descriptions, for instance mapping the description of a fluid using the Navier-Stokes equations to the description of an event horizon of a black hole using Einstein's equations. This textbook covers the applications of string theory methods and the mathematics of AdS/CFT to areas of condensed matter physics. Bridging the gap between string theory and condensed matter, this is a valuable textbook for students and researchers in both fields.

**Principles of Radiation Interaction in Matter and Detection** Claude Leroy, Pier-Giorgio Rancoita, 2011-09-23 This book, like the first and second editions, addresses the fundamental principles of interaction between radiation and matter and the principles of particle detection and detectors in a wide scope of fields, from low to high energy, including space physics and medical environment. It provides abundant information about the processes of electromagnetic and hadronic energy deposition in matter, detecting systems, performance of detectors and their optimization. The third edition includes additional material covering, for instance: mechanisms of energy loss like the inverse Compton scattering, corrections due to the Landau-Pomeranchuk-Migdal effect, an extended relativistic treatment of nucleus-nucleus screened Coulomb scattering, and transport of charged particles inside the heliosphere. Furthermore, the displacement damage (NIEL) in semiconductors has been revisited to account for recent experimental data and more comprehensive comparisons with results previously obtained. This book will be of great use to graduate students and final-year undergraduates as a reference and supplement for courses in particle, astroparticle, space physics and instrumentation. A part of the book is directed toward courses in medical physics. The book can also be used by researchers in experimental particle physics at low, medium, and high energy who are dealing with instrumentation.
