Cyber Environment and International Politics

Hasret Çomak, Burak Şakir Şeker, Yaprak Civelek, Çağla Arslan Bozkuş, 2022-11-27 Actors in the cyber sphere include countries' armed forces, intelligence organizations, legal authorities, and natural and legal persons. Cyber War is defined as the intrusion by one state to destroy or disrupt the computer systems or networks of another state. It is defined as "the sort of warfare in which computer systems are employed to damage or destroy adversary systems" in the United Nations Glossary,

in the same way as information warfare. Cyber warfare moves at a breakneck speed. It's a global phenomenon that occurs before the traditional battleground. In order to counter cyber crimes and related issues, more studies needed to improve our understanding, inform policies and develop and strengthen cooperation between individuals, institutions and countries. All states need to take constitutional, legal, technical and administrative measures on cybersecurity. For this purpose, "national virtual environment security policies" should be developed and constantly updated. National information security should be given utmost importance. A cyber security awareness culture should be established and supported by regional and global international institutions and organizations. A common understanding on cyber security needs to be adopted at all levels.

The Unhackable Internet Thomas P. Vartanian, 2023-02-15 Like most aspects of modern existence, more and more of our financial lives have migrated to the digital realm. With the

benefits of ease that our Internet allows us, that transition also raises numerous – and dangerous – threats to national security, our money, and the systems we use to store and transfer it. In *The Unhackable Internet*, financial services and technology expert Thomas P. Vartanian exposes the vulnerabilities of the many networks that we rely on today as well as the threats facing the integrity of our national security and financial services sector. From cyberattacks by foreign adversaries like China and Russia, the explosion of cryptocurrency, the advancement of ransomware, phishing, surveillance apps, spying software, and logic bombs, along with the increasing savvy and daring shown by Internet hackers, the next financial panic is likely to be delivered to us through use or abuse of technology. *The Unhackable Internet* describes how society can remake an Internet that was never conceived as a secure environment and badly tainted by the original sin of substandard coding. Vartanian argues for increasing the use of private and offline network infrastructures, controlling the ownership of Internet infrastructure, and imposing enhanced authentication, governance, and enforcement standards. This online universe would look more like our analog lives, authenticating all digital traffic to a real person and removing any virtual traveler that violated the new rules of the road. *The Unhackable Internet* poses a challenge to America: take the lead and create a coalition of democratic nations to implement financial cyber strategies or be left with no counterweight short of military power to respond to those who

weaponize technology. This comprehensive and compelling book makes it clear that nothing less than the control of global economies is up for grabs, and that how we use technology is our choice.

Survival April–May 2021: Facing Russia 0 The International Institute for Strategic Studies (IISS), 2023-04-14 Survival, the IISS's bimonthly journal, challenges conventional wisdom and brings fresh, often controversial, perspectives on strategic issues of the moment. In this issue: Marcus Willett examines Russia's SolarWinds hack and the painful lessons it holds for the United States In a special forum, seven experts consider the purpose and effectiveness of the United Nations, as well as the intricacies of Security Council reform, on its 75th anniversary Peter Rudolf argues that the United States' perception of China as a revisionist strategic rival will complicate transatlantic policy coordination Ray Takeyh considers whether the US intelligence community bungled assessments of Iran's political stability in the late 1970s And six more thought-provoking pieces, as well as our regular Book Reviews and Noteworthy column. Deter, Disrupt, or Deceive Robert Chesney, Max Smeets, 2023-05-01 A fresh perspective on statecraft in the cyber domain The idea of "cyber war" has played a dominant role in both academic and popular discourse concerning the nature of statecraft in the cyber domain. However, this lens

of war and its expectations for death and destruction may distort rather than help clarify the nature of cyber competition and conflict. Are cyber activities actually more like an intelligence contest, where both states and nonstate actors grapple for information advantage below the threshold of war? In *Deter, Disrupt, or Deceive*, Robert Chesney and Max Smeets argue that reframing cyber competition as an intelligence contest will improve our ability to analyze and strategize about cyber events and policy. The contributors to this volume debate the logics and implications of this reframing. They examine this intelligence concept across several areas of cyber security policy and in different national contexts. Taken as a whole, the chapters give rise to a unique dialogue, illustrating areas of agreement and disagreement among leading experts and placing all of it in conversation with the larger fields of international relations and intelligence studies. *Deter, Disrupt, or Deceive* is a must read because it offers a new way for scholars, practitioners, and students to understand statecraft in the cyber domain.

Contemporary Challenges for Cyber Security and Data Privacy Mateus-Coelho, Nuno, Cruz-Cunha, Maria Manuela, 2023-10-16 In an era defined by the pervasive integration of digital systems across industries, the paramount concern is the safeguarding of sensitive information in the face of escalating cyber threats. *Contemporary Challenges for Cyber Security and Data Privacy* stands as an indispensable compendium of erudite research, meticulously curated to illuminate the

In this scholarly research book, a consortium of distinguished experts and practitioners convene to dissect, analyze, and propose innovative countermeasures against the surging tide of digital malevolence. The book navigates the intricate domain of contemporary cyber challenges through a prism of empirical examples and intricate case studies, yielding unique and actionable strategies to fortify the digital realm. This book dives into a meticulously constructed tapestry of topics, covering the intricate nuances of phishing, the insidious proliferation of spyware, the legal crucible of cyber law and the ominous specter of cyber warfare. Artificial Intelligence for Cyber Security: Methods, Issues and Possible Horizons or Opportunities

Sanjay Misra, Amit Kumar

Tyagi, 2021-05-31 This book provides stepwise discussion, exhaustive literature review, detailed analysis and discussion, rigorous experimentation results (using several analytics tools), and an application-oriented approach that can be demonstrated with respect to data analytics using artificial intelligence to make systems stronger (i.e., impossible to breach). We can see many

serious cyber breaches on Government databases or public profiles at online social networking in the recent decade. Today artificial intelligence or machine learning is redefining every aspect of cyber security. From improving organizations' ability to anticipate and thwart breaches, protecting the proliferating number of threat surfaces with Zero Trust Security frameworks to making passwords obsolete, AI and machine learning are essential to securing the perimeters of any business. The book is useful for researchers, academics, industry players, data engineers, data scientists, governmental organizations, and non-governmental organizations.

Software Engineering, Artificial Intelligence, Networking and Parallel/Distributed Computing
Roger Lee, 2022-01-03 This book presents scientific results of the 22nd ACIS International Fall Virtual Conference on Software Engineering, Artificial Intelligence, Networking and Parallel/Distributed Computing (SNPD2021-Fall) which was held on November 24–26, 2021, at Taichung, Taiwan. The aim of this conference was to bring together researchers and scientists, businessmen and entrepreneurs, teachers, engineers, computer users, and students to discuss the numerous fields of computer science and to share their experiences and exchange new ideas and information in a meaningful way. Research results about all aspects (theory, applications and tools) of computer and information science, and to discuss the practical challenges encountered along the way and the solutions adopted to solve them. The conference organizers selected the best papers

from those papers accepted for presentation at the conference. The papers were chosen based on review scores submitted by members of the program committee and underwent further rigorous rounds of review. From this second round of review, 13 of most promising papers are then published in this Springer (SCI) book and not the conference proceedings. We impatiently await the important contributions that we know these authors will bring to the field of computer and information science.
