From Program to Product Rocky Smolin, 2008-05-31 This book is not a general software business reference, like our MicroISV book or the Eric Sink book. It's specifically for readers who have an existing project, or an idea for one, and want to turn it into a product. They can follow this book for the best chance of success. It is written in a non-technical, friendly, conversational style, and is filled with excerpts, advice, and war stories from someone who's been in the trenches for years.

Digital Review of Asia Pacific 2007/2008 Idrc, 2008-01-07 The biennial Digital Review of Asia Pacific is a comprehensive guide to the state-of-practice and trends in information and communication technologies for development (ICT4D) in Asia Pacific. This third edition (2007-2008) covers 31 countries and economies, including North Korea for the first time. Each country chapter presents key ICT policies, applications and initiatives for national development. In addition, five thematic chapters provide a synthesis of some of the key issues in ICT4D in the region, including mobile and wireless technologies, risk communication, intellectual property regimes and localization. The authors are drawn from government, academe, industry and civil society, providing a broad perspective on the use of ICTs for human development.

Digital Property Wendy W. Fok, Antoine Picon, 2017-03-09 Even more than authorship, ownership is challenged by the rise of digital and computational methods of design and production. These challenges are simultaneously legal, ethical and economic. How are new methods of fabrication and manufacture going to irreversibly change not only ways of working, but also designers' ethics and their stance on ownership? In his 2013 second-term State of the Union address, President Obama stated that 3D printing 'has the potential to revolutionize the way we make almost everything'. Nowhere will the impact of 3D printing be felt greater than in the architectural and design communities. When anyone can print out an object or structure from a digital file, will designers still exert the same creative rights or will they need to develop new practice and payment models? As architecture becomes more collaborative with open-source processes, will the emphasis on signature as the basis of ownership remain relevant? How will wider teams working globally be accredited and compensated? This issue of AD explores this subject; it features the work of designers who are developing wholly new approaches to practice by exploring means of commercialising process-based products rather than objects. Contributors: Phil Bernstein, Mark Garcia, Antoine Picon, Carlo Ratti and David Ruy. Featured architects: Francis Bitonti, Marjan Colletti, Wendy W Fok, Panagiotis Michalatos, Jose Sanchez, Thibault Schwartz, Aaron Sprecher, Feng Xu and Philip Yuan.

Multimedia Modeling Shoji Hashimoto, 2000 Since the beginning of human history we have had a communication network that is identical with the physical distribution network. In the late 19th century we established the energy network to distribute electric and thermal energy, launching the modern society. The analog communication network became popular in the middle of the 20th century. And now, at the end of the 20th century, we have global digital information networks. Along with the advancement of the communication network, the progress of the information processing technology can be classified into three historical phases. The first phase technology is

physical information processing, treating physical data from the real world. This technology is often called "signal processing" and is based on the physical law of nature. The second phase is free from the physical constraints. It is logical information processing, dealing with knowledge and rules. The most important aspect of this phase is consistency. "Provable" is employed to confirm the reality of the system. Based on the advanced computer and network technology, we are entering the third phase of information processing, which is "Kansei" information processing. ("Kansei" is a Japanese word expressing some subjective ability referred to as "sensitivity", "intuition", "affection" or "emotion"). Emotional resonance or consent is important in the pursuit of reality in this phase. Multimedia modeling to harmonize different media and systems is one of the key technologies in the third phase of information processing. It will provide a next generation framework to construct a human-centered information environment that is more comfortable and more productive. This volume is devoted to a discussion on effective modeling of multimedia information and systems for a wide range of applications. It contains 30 technical articles, all of which were selected, after vigorous peer reviews, for presentation at the International Conference on Multimedia Modeling held in Nagano, Japan, on 13-15 November 2000.

Headland-bay Beaches: Static Equilibrium Concept For Shoreline Management

Rong-chung John Hsu,Jung Lyul Lee,Antonio Henrique Da Fontoura Klein,Mauricio Gonzalez,Raul Medina,2021-06-22 Headland-bay beaches (HBBs) are ubiquitous in coastal environment. They exist around the world naturally or artificially as byproduct of engineering project. Though in various shapes, sizes and stability, a HBB in static equilibrium not only is a delight for visitors, but also offers hope for better beach protection, restoration, recreation, and shoreline management. With an empirical parabolic model now available, the stability of an existing HBB can be verified, the future bay shape downdrift of a harbor can be predefined, and a stable HBB can be designed.Although a plethora of books are available for coastal and ocean engineering and geomorphology, only a countable few have covered engineering applications of HBBs. On the contrary, this book with focus on the HBBs in static equilibrium aims to offer a comprehensive volume with knowledge and applications for coastal scientists, engineers, managers, students, and the general public interested in HBBs. Useful software tools for HBBs (MEPBAY, MeePaSoL, and SMC) are introduced in the book to aid in applications.The authors have set out to make this book the first unique publication on HBBs, by bringing together the old coastal geomorphic knowledge and new concepts for static bay beaches. This book also provides numerous examples using the static bay beach concept to assist coastal scientists and engineers on planning and pre-design of a stable HBB, and for experimentalists, consultants, and numerical modelers to alleviate the burden of comparing planning options and conducting laborious physical experiments on coastal sedimentation problems.

Quantifying Software Capers Jones,2017-10-24 Software is one of the most important products in human history and is widely used by all industries and all countries. It is also one of the most expensive and labor-intensive products in human history. Software also has very poor quality that has caused many major disasters and wasted many millions of dollars. Software is also the target of frequent and increasingly serious cyber-attacks. Among the reasons for these software problems is a chronic lack of reliable quantified data. This reference provides quantified data from many countries and many industries based on about 26,000 projects developed using a variety of methodologies and team experience levels. The data has been gathered between 1970 and 2017, so interesting historical trends are available. Since current average software productivity and quality results are suboptimal, this book focuses on best in class results and shows not only quantified quality and productivity data from best-in-class organizations, but also the technology stacks used to achieve best-in-class results. The overall goal of this book is to encourage the adoption of best-in-class software metrics and best-in-class technology stacks. It does so by providing current data on average software schedules, effort, costs, and quality for several industries and countries. Because productivity and quality vary by technology and size, the book presents quantitative results for applications between 100 function points and 100,000 function points. It shows quality results using defect potential and DRE metrics because the number one cost driver for software is finding and fixing bugs. The book presents data on cost of quality for software projects and discusses technical debt, but that metric is not standardized. Finally, the book includes some data on three years of software maintenance and enhancements as well as some data on total cost of ownership.

Coastal Processes Assessment for Brevard County, Florida, with Special Reference to Test Plaintiffs Nicholas C. Kraus,Mark R. Byrnes,Anne-Lise Lindquist,1999 This report was prepared as an independent assessment of the coastal physical processes occurring along Brevard County, Florida. The study was conducted for the U.S. Department of Justice, Environment and Natural Resources Division, in its involvement with the lawsuit Applegate et al. versus the United States of America. Long-term regional beach change is evaluated by analysis of survey data on shoreline position, bathymetry, and beach profiles taken through time. In addition, analysis is specifically made for the properties of two test plaintiffs selected by the Court. Estimates of

beach and dune erosion, if any, are calculated for the two test plaintiffs from date of purchase of the properties. Erosion of the beaches and dunes, principally attributed to storms, was estimated at the properties of the two test plaintiffs by compiling storm data and calculating beach and dune change with a numerical model.

Malcolm F.J. Telasco,1880-12-01 There are some people that just need killing. They are evil and out for the blood of others. They seek out the weak and most innocent in our society. They prey upon them to meet their nefarious needs. These people have a new enemy. He is a hunter who uses an ancient ritual to help him find his prey. And when he does find them, he inflicts as much pain on them, as they have inflicted upon others. He is a vigilante with the tendencies of a serial killer. He is ruthless and focused. If you find yourself in his cross-hairs, don't bother running or hiding. He will come for you and he will find you. His name is Malcolm, Malcolm Forbes. On this occasion, Malcolm finds himself pitted against a man, a group and an entity. In the middle of all this, there is a child that has been kidnapped. Malcolm will search for the child and try to rescue him. He will have to stay ahead of the FBI and attempt to out-smart his enemies. Malcolm will enter the hunt of his life. He will stare death in the eyes and wage a private war. He will fight to save the child and in the process, save his own life. This journey will take Malcolm from the shores of South Beach, Florida and to the high plains of Utah. He will need all of his skills, experience and wit to battle these foes. In the end, he cannot lose because it would mean the corruption of his very soul.
