Financial Cryptography and Data Security Roger

Dingledine, Philippe Golle, 2009-07-21 This volume contains the proceedings of the 13th International Conference on Financial Cryptography and Data Security, held at the Accra Beach Hotel and Resort, Barbados, February 23-26, 2009. Financial Cryptography and Data Security (FC) is a well-established international forum for research, advanced development, education, exploration and debate regarding information assurance in the context of finance and commerce. The conference covers all aspects of securing transactions and systems. The goal of FC is to bring security and cryptography researchers and practitioners together with economists, bankers, and policy makers. This year, we assembled a vibrant program featuring 21 peer-reviewed research paper presentations, two panels (on the economics of information security and on authentication), and a keynote address by David Dagon. Despite a proliferation of security and cryptography venues, FC continues to receive a large number of high-quality submissions. This year, we received 91 submissions (75 full-length papers, 15 short papers and 1 panel). Each submission was reviewed by at least three reviewers. Following a rigorous selection, ranking and discussion process, the Program Committee accepted 20 full-length papers, 1 short paper and 1 panel. The overall acceptance rate was 24%.

Technobiophilia Sue Thomas, 2013-09-26 Why are there so

many nature metaphors - clouds, rivers, streams, viruses, and bugs - in the language of the internet? Why do we adorn our screens with exotic images of forests, waterfalls, animals and beaches? In *Technobiophilia: Nature and Cyberspace*, Sue Thomas interrogates the prevalence online of nature-derived metaphors and imagery and comes to a surprising conclusion. The root of this trend, she believes, lies in biophilia, defined by biologist E.O. Wilson as 'the innate attraction to life and lifelike processes'. In this wide-ranging transdisciplinary study she explores the strong thread of biophilia which runs through our online lives, a phenomenon she calls 'technobiophilia', or, the 'innate attraction to life and lifelike processes as they appear in technology'. The restorative qualities of biophilia can alleviate mental fatigue and enhance our capacity for directed attention, soothing our connected minds and easing our relationship with computers. *Technobiophilia: Nature and Cyberspace* offers new insights on what is commonly known as 'work-life balance'. It explores ways to make our peace with technology-induced anxiety and achieve a 'tech-nature balance' through practical experiments designed to enhance our digital lives indoors, outdoors, and online. The book draws on a long history of literature on nature and technology and breaks new ground as the first to link the two. Its accessible style will attract the general reader, whilst the clear definition of key terms and concepts throughout should appeal to undergraduates and postgraduates of new media and communication studies, internet studies, environmental psychology, and human-computer interaction. www.technobiophilia.com

Screen Saver Noel McKeehan, 2009-11 Some fairly serious shit has happened in the last sixty years. As fate would have it, I was fairly close to the central point of a lot of that shit - albeit in some cases only briefly; shit it seems, has a fairly long half life. As time has passed I have found it increasingly difficult - impossible really - to turn off a continued remembrance of the events and places and people that inhabited the story boards of all of that shit. They just

won't leave me alone. So I have written it, and them, all down. One bookend of the story was my involvement in the war effort, as we called the Vietnam debacle. The other was the near demise of IBM. Between those bookends there lurk a wide variety of people, experiences and events that always seemed, as they occurred, to be coherently additive to the total story.

Mac OS X: The Missing Manual, Tiger Edition David Pogue, 2005-07-12 You can set your watch to it: As soon as Apple comes out with another version of Mac OS X, David Pogue hits the streets with another meticulous Missing Manual to cover it with a wealth of detail. The new Mac OS X 10.4, better known as Tiger, is faster than its predecessors, but nothing's too fast for Pogue and Mac OS X: The Missing Manual. There are many reasons why this is the most popular computer book of all time. With its hallmark objectivity, the Tiger Edition thoroughly explores the latest features to grace the Mac OS. Which ones work well and which do not? What should you look for? This book tackles Spotlight, an enhanced search feature that helps you find anything on your computer; iChat AV for videoconferencing; Automator for automating repetitive, manual or batch tasks; and the hundreds of smaller tweaks and changes, good and bad, that Apple's marketing never bothers to mention. Mac OS X: The Missing Manual, Tiger Edition is the authoritative book that's ideal for every user, including people coming to the Mac for the first time. Our guide offers an ideal introduction that demystifies the Dock, the unfamiliar Mac OS X folder structure, and the entirely new Mail application. There are also mini-manuals on iLife applications such as iMovie, iDVD, and iPhoto, those much-heralded digital media programs, and a tutorial for Safari, Mac's own web browser. And plenty more: learn to configure Mac OS X using the System Preferences application, keep your Mac secure with FileVault, and learn about Tiger's enhanced Firewall capabilities. If you're so inclined, this Missing Manual also offers an easy introduction to the Terminal application for issuing basic Unix commands. There's

something new on practically every page, and David Pogue brings his celebrated wit and expertise to every one of them. Mac's brought a new cat to town and we have a great new way to tame it.

VB.NET Hacks & Pranks Alexander Klimov, 2005 This study of the VB.NET programming language through hacks and pranks relates to all contemporary versions of the Windows family of operating systems, including Windows 9x, ME, NT, 2000, XP, and Server 2003. Windows GUI, shell, and multimedia and game programming are addressed along with tricks and secrets used in development. Developers are shown how to work with the .NET framework controls, how to build custom controls for Windows and web pages, and how to create their own structures from the building blocks offered by the .NET Framework. Windows paint and draw elements are also explained, as well as how to use the built-in graphics of Windows.

Border Ecology Ila Nicole Sheren, 2023-03-10 This book analyzes how contemporary visual art can visualize environmental crisis. It draws on Karen Barad's method of "agential realism," which understands disparate factors as working together and "entangled." Through an analysis of digital eco art, the book shows how the entwining of new materialist and decolonized approaches accounts for the nonhuman factors shaping ecological crises while understanding that a purely object-driven approach misses the histories of human inequality and subjugation encoded in the environment. The resulting synthesis is what the author terms a border ecology, an approach to eco art from its margins, gaps, and liminal zones, deliberately evoking the idea of an ecotone. This book is suitable for scholarly audiences within art history, criticism and practice, but also across disciplines such as the environmental humanities, media studies, border studies and literary eco-criticism.

The Bible Of The 3rd Millennium Russell James Stein, 2014-04-11 "It took me a while but I've seen the light but as may you." How I got there with the rest of this book is hard to ascertain now (although I've actually now managed to write about this concisely at the end, now that I'm writing this right now in the future now - sounds a bit ridiculous, I know, and far too many 'nows'), but what I've put I'm damn sure is true and it will be as true for anyone else. And that's why I think this book has so much value. With these writings, it should all damn well work!! Read on please...

10 PRINT CHR\$(205.5+RND(1)); : GOTO 10 Nick Montfort, Patsy

Baudoin, John Bell, Ian Bogost, Jeremy Douglass, 2014-08-29 A single line of code offers a way to understand the cultural context of computing. This book takes a single line of code—the extremely concise BASIC program for the Commodore 64 inscribed in the title—and uses it as a lens through which to consider the phenomenon of creative computing and the way computer programs exist in culture. The authors of this collaboratively written book treat code not as merely functional but as a text—in the case of 10 PRINT, a text that appeared in many different printed sources—that yields a story about its making, its purpose, its assumptions, and more. They consider randomness and regularity in computing and art, the maze in culture, the popular BASIC programming language, and the highly influential Commodore 64 computer.

Rocket Dreams Marina Benjamin, 2003-05-25 In 1958, mankind's centuries-long flirtation with space flight became a torrid love affair. For a decade, tens of millions of people were enraptured -- first, by the U.S.-Soviet race to the moon, and finally, as America outstripped its rival, by Project Apollo alone. It is now more than three decades since the last man walked on the moon...more time than between the first moonwalk and the beginning of World War II. Apollo did not, as had been promised by a generation of visionaries, herald the beginning of the Space Age, but its end. Or did it? Project Apollo, like a cannonball, reached its apogee and returned to earth, but the trajectory of that return was complex. America's atmosphere -- its economic, scientific, and cultural atmosphere -- made for a very complicated reentry that produced many solutions to the trajectory problem. *Rocket Dreams* is about those solutions...about the places where the space program landed. In *Rocket Dreams*, an extraordinarily talented young writer named Marina Benjamin will take you on a journey to those landing sites. A visit with retired astronauts at a celebrity autograph show is a starting point down the divergent paths taken by the pioneers, including Edgar Mitchell, founder of the church of Noëtic Sciences. Roswell, New Mexico is a landing site of a different order, the magnetic north of UFO belief in the United States -- a belief that began its most dramatic growth precisely at the time that the path of the space program began its descent. In the vernacular, the third law of motion states that what goes up, must come down. Thus the tremendous motive force that energized the space program didn't just vanish; it was conserved and transformed, making bestsellers out of fantasy literature, spawning Gaia, and giving symbolism to the environmental movement. Everything from the pop cultural boom in ufology to

the worldwide Search for Extra-Terrestrial Intelligence (SETI) feeds on the energy given off by America's leap toward space. *Rocket Dreams* is an eloquent tour of this Apollo-scarred landscape. It is also an introduction to some of the most fascinating characters imaginable: Some long dead, like the crackpot visionary Alfred Lawson, who saw in space flight a new stage of human evolution (Alti-Man), or Robert Goddard, the father of rocketry, whose workshop in Roswell stands only half a mile from shops selling posters of alien visitors. Others are very much alive -- like Stewart Brand, creator of the Whole Earth Catalog and partner with Gerard O'Neill in the drive to build free-floating space colonies, and SETI astronomer Seth Shostak, who has spent decades listening to the skies, hoping for the first contact with another intelligent species. Perceptive, original, and wonderfully written, informed by history, science, and an acute knowledge of popular culture, *Rocket Dreams* is a brilliant book by a remarkable talent.

Space and Collections Earning their Keep Joseph Hafner,Diane Koen,2016-07-11 Traditionally, libraries have served as storage spaces offering access to diverse physical collections. Today, following numerous social and technological changes, libraries are retooling their services, rethinking storage and reimagining their spaces. The transformation in information technology has had an enormous impact on users' research behaviour, which in turn demands new discovery environments. A conference of the IFLA Library Buildings and Equipment and the Acquisition and Collection Development Sections spotlighted libraries from around the world who are providing quality, adaptable and innovative library spaces and services meeting the changing needs of their users, their collections, their staff and their communities.
