Playing War Matthew Thomas Payne,2016-04-05 Explores the culture that made military shooter video games popular, and key in understanding the War on Terror No video game genre has been more popular or more lucrative in recent years than the "military shooter." Franchises such as Call of

Duty, Battlefield, and those bearing Tom Clancy's name turn over billions of dollars annually by promising to immerse players in historic and near-future battles, converting the reality of contemporary conflicts into playable, experiences. In the aftermath of 9/11, these games transformed a national crisis into fantastic and profitable adventures, where seemingly powerless spectators became solutions to these virtual Wars on Terror. Playing War provides a cultural framework for understanding the popularity of military-themed video games and their significance in the ongoing War on Terror. Matthew Payne examines post-9/11 shooter-style game design as well as gaming strategies to expose how these practices perpetuate and challenge reigning political beliefs about America's military prowess and combat policies. Far from offering simplistic escapist pleasures, these post-9/11 shooters draw on a range of nationalist mythologies, positioning the player as the virtual hero at every level. Through close readings of key games, analyses of marketing materials, and participant observations of the war gaming community, Playing War examines an industry mobilizing anxieties about terrorism and invasion to craft immersive titles that transform international strife into interactive fun.

Orr, Joanna Quinn, Frank Cottrell-Boyce, Toby Litt, 2015-06-15 Computers are changing. Soon the silicon chip will seem like a clunky antique amid the bounty of more exotic processes on offer. Robots are changing too; material evolution and swarm intelligence are creating a new generation of devices that will diverge and disperse into a balanced ecosystem of humans and 'objects' (robotic objects). Somewhere in between, we humans will have to change also... in the way we interact with technology, the roles we adopt in an increasingly 'intelligent' environment, and how we interface with each other. The driving motors behind many of these changes will be artificial life (A-Life) and unconventional computing. How exactly they will impact on our world is still an open question. But in the spirit of collective intelligence, this anthology brings together 38 scientists and authors, working in pairs, to imagine what life (and A-Life) will look like in the year 2070. Every kind of technology is imagined: from lie-detection glasses to military swarmbots, brain-interfacing implants to synthetically 'grown' skyscrapers, revolution-inciting computer games to

synthetically engineered haute cuisine. All artificial life is here. Featuring scientific contributions from: Martyn Amos, J. Mark Bishop, Seth Bullock, Stephen Dunne, James Dyke, Christian Jantzen, Francesco Mondada, James D. O'Shea, Andrew Philippides, Lenka Pitonakova, Steen Rasmussen, Thomas S. Ray, Micah Rosenkind, James Snowdon, Susan Stepney, Germán Terrazas, Andrew Vardy and Alan Winfield. Supported by TRUCE (Training and Research in Unconventional Computation in Europe).

**Videogames and Horror** Dawn Stobart, 2019-10-01 Videogames are full of horrors – and of horror, a facet of the media that has been largely overlooked by the academic community in terms of lengthy studies in the fast-growing field of videogame scholarship. The topics covered include the construction of stories in videogames, the role of the monster and, of course, how death is treated as a learning tool and as a facet of horror.
