Real-World Flash Game Development Christopher Griffith,2012-11-12 This book covers Flash for the everyday developer. The average Flash developer doesn't have luxurious timelines, employers who understand the value of reusability, or the help of an information architect to design a usable experience. This book helps bridge the gap for these coders who may be used to C++, Java, or C# and want to move over to Flash. Griffith covers real-world scenarios pulled from his own experiences developing games for over 8 years in the industry. Gifts from Griffith's REAL-WORLD experiences include: Game design templates and pre-written scripts to automate tasks within Flash; Classes for handling common math computations used in gaming, so that game developers can see how to set up a simple game flow; Powerful debugging tools for your games(debuggers for Flash games are hard to come by, and this book provides them for you). The associated web site offers: Code from the game examples in the book with fully buildable source files. Additional code snippets, classes, and utilities. Scripts for automating tedious and repetitive tasks within Flash. Template game-design documents for planning game proposals in the same manner outlined in the book. Links to other helpful online resources for both Flash and game development.

IPHA - An Open Source Framework for Development of Strategy Games based on Microsoft

Technology Jacob Barkai,2009-07-28 Professorial Dissertation from the year 2009 in the subject Computer Science - Theory, grade: 90, Tel-Hai Academic College, language: English, abstract: Strategy computer games are nowadays a very popular and exciting genre in the world of computer games. Many succeeding commercial games were developed since the end 1980's and contributed to the growth and interest in computer games in general and strategy games in particular. Games such as Command & Conquer™ series (by Westwood and EA Studios), Civilization™ series (by Sid Meier), Warcraft™ and StarCraft™ series (by Blizzard) entered to the computer games' hall of fame, thanks to their inventiveness, artificial intelligence challenge and visual effects that they offer. Almost every strategy computer game was based on the idea of an electronic board game, a modern brother to the classic, physical board games such as chess, checkers, backgammon, hexxagon and more. An interesting issue is the fact that both the classic board games and the modern strategy computer games are sharing many of the key elements that make the players think and act strategically and tactically, according to the development of the game. This issue is the basis for the project, and discussed further in the next pages. It is common to divide strategy games into two main types: Abstract strategy, where there is perfect information regard to the game's state. An example for an Abstract strategy is Chess. The other type is Concrete strategy where there is incomplete information regard to the game's state. This characteristic makes the game more interesting and surprising. An example for such a game is Stratego. This project aims to serve as an open source code framework, written under Microsoft .NET, for easy creation and expansion of abstract strategy games by providing operational artificial intelligence algorithms and well-defined class libraries based on concepts taken from the game theory for decision making aspects. PLEASE NOTICE: This document contains the complete theoretic information regard the subject. Yet, the source code of the project is NOT part of the document as well as the API manual.
