Dams and Development World Commission on Dams,2016-05-13 By the year 2000, the world had built more than 45,000 large dams to irrigate crops, generate power, control floods in wet times and store water in dry times. Yet, in the last century, large dams also disrupted the ecology of half the world's rivers, displaced tens of millions of people from their homes and left nations burdened with debt. Their impacts have inevitably generated growing controversy and conflicts. Resolving their role in meeting water and energy needs is vital for the future and illustrates the complex development challenges that face our societies. The Report of the World Commission on Dams: - is the product of an unprecedented global public policy effort to bring governments, the private sector and civil society together in one process - provides the first comprehensive global and independent review of the performance and impacts of dams - presents a new framework for water and energy resources development - develops an agenda of seven strategic priorities with corresponding criteria and guidelines for future decision-making. Challenging our assumptions, the Commission sets before us the hard, rigorous and clear-eyed evidence of exactly why nations decide to build dams and how dams can affect human, plant and animal life, for better or for worse. Dams and Development: A New Framework for Decision-Making is vital reading on the future of dams as well as the changing development context where new voices, choices and options leave little room for a business-as-usual scenario.

Asian Development Outlook 2018 Asian Development Bank,2018-04-01 The annual Asian Development Outlook analyzes economic performance in the past year and offers forecasts for the next 2 years for the 45 economies in Asia and the Pacific that make up developing Asia. Growth prospects in the region are upbeat, buoyed by favorable demand at home and abroad. A strong performance in 2017 reflected a surge in exports, which will likely abate this year and next, and rapidly expanding domestic demand. While the outlook is for steady growth, risks to it are decidedly on the downside: Trade friction could weaken recently deepened trade links, tightening US monetary policy could diminish investment in developing Asia, and rising domestic private debt may hamper growth. New technologies drive higher productivity, the foundation for economic growth, better-paid jobs, and poverty reduction. The latest technologies in robotics and artificial intelligence may threaten some jobs, however, and leave less-skilled workers behind. To maximize gains in productivity while safeguarding social welfare, governments in developing Asia should protect workers but not preserve particular jobs. Meanwhile, they should facilitate the countervailing forces in new technologies that generate new jobs. Dealing with the downsides of new technology requires synchronized effort on skills development, labor regulation, social protection, and income redistribution.

Bats in the Anthropocene: Conservation of Bats in a Changing World Christian C. Voigt,Tigga Kingston,2015-12-07 This book focuses on central themes related to the conservation of bats. It details their response to land-use change and management practices, intensified urbanization and roost disturbance and loss. Increasing interactions between humans and bats as a result of hunting, disease relationships, occupation of human dwellings, and conflict over fruit crops are explored in depth. Finally, contributors highlight the roles that taxonomy, conservation networks and conservation psychology have to play in conserving this imperilled but vital taxon. With over 1300 species, bats are the second largest order of mammals, yet as the Anthropocene dawns, bat populations around the world are in decline. Greater understanding of the anthropogenic drivers of this decline and exploration of possible mitigation measures are urgently needed if we are to retain global bat diversity in the coming decades. This book brings together teams of international experts to provide a global review of current understanding and recommend directions for future research and mitigation.

A Review of Fire Projects in Indonesia, 1982-1998 Rona Dennis,1999-01-01 Fire in the wet tropical climate of Indonesia is not a new phenomenon. The 'Great Fire of Borneo' in 1982-83 was one of the worst fire events in recent decades. Small holders clearing land for cultivation were primarily blamed for starting fires that rapidly spread out of control. Subsequent fires linked to El Nino-Southern Oscillation occurred in 1987, 1991 1994 and most recently in 1997-98. The impact of the latest fire event is immense; estimates of the area burnt in 1997 vary between two and five million hectares (forest and non-forest), the number of people affected by smoke haze and fire at 75 million and the total economic costs in the region at as much as US\$4.5 billion. The 1982-83 fires brought the issue to world attention. After 1992 three long-term projects were initiated with the objectives of management and monitoring of fires. These were the EU-Forest Fire Prevention and Control Project in Southern Sumatra (1995-1998), GTZ's Integrated Forest Fire Management Project in East Kalimantan (1994-2000), and JICA's Forest Fire Prevention and Management Project in Bogor, Jambi and West Kalimantan (1996-2001). In addition, the Indonesia-UK Tropical Forest Management Programme started in 1992 and comprised a number of components related to fires as part of its overall improved forest management objective. After the 1997 fires numerous short- and long-term fire projects were proposed and started. Others, such as the first phase of the WWF project and the ADB's regional (RETA) and national (ADTA) projects, within a short time frame try to cover many aspects of fire problem such as socio-economic assessments, fire-fighting, area estimates, economic and policy assessments and ecological assessments. Representing a longer-term approach, CIFOR-ICRAF-UNESCO propose an in-depth study of the underlying causes and effects of fires. In addition to the international response Indonesia has several government agencies charged with the task of preventing, monitoring and controlling land and forest fires. Following the forest and land fires of 1994, the National Coordination Team for Land and Forest Fire Control was established in 1995. Interest in fire is only short-lived after a major fire event. Before the 1994 fires little attention was paid to the fire problem and missions mainly focussed on control and prevention of fires. Most of the new generation of fire projects established in 1997-98 address both issues.

Fundamentals of Geophysics William Lowrie,2007-09-20 This second edition of Fundamentals of Geophysics has been completely revised and updated, and is the ideal geophysics textbook for undergraduate students of geoscience with an introductory level of knowledge in physics and mathematics. It gives a comprehensive treatment of the fundamental principles of each major branch of geophysics, and presents geophysics within the wider context of plate tectonics, geodynamics and planetary science. Basic principles are explained with the aid of numerous figures and step-by-step mathematical treatments, and important geophysical results are illustrated with examples from the scientific literature. Text-boxes are used for auxiliary explanations and to handle topics of interest for more advanced students. This new edition also includes

review questions at the end of each chapter to help assess the reader's understanding of the topics covered and quantitative exercises for more thorough evaluation. Solutions to the exercises and electronic copies of the figures are available at www.cambridge.org/9780521859028.

Sustainable Horticultural Systems Dilip Nandwani, 2014-10-14 Sustainable horticulture is gaining increasing attention in the field of agriculture as demand for the food production rises to the world community. Sustainable horticultural systems are based on ecological principles to farm, optimizes pest and disease management approaches through environmentally friendly and renewable strategies in production agriculture. It is a discipline that addresses current issues such as food security, water pollution, soil health, pest control, and biodiversity depletion. Novel, environmentally-friendly solutions are proposed based on integrated knowledge from sciences as diverse as agronomy, soil science, entomology, ecology, chemistry and food sciences. Sustainable horticulture interprets methods and processes in the farming system to the global level. For that, horticulturists use the system approach that involves studying components and interactions of a whole system to address scientific, economic and social issues. In that respect, sustainable horticulture is not a classical, narrow science. Instead of solving problems using the classical painkiller approach that treats only negative impacts, sustainable horticulture treats problem sources.

Piracy and Maritime Crime: Historical and Modern Case Studies Bruce A. Ellerman, Andrew Forbes, David Rosenberg, 2010 Piracy is a basic and fundamental concern for all navies. From almost the beginning of state-sponsored navies, piracy suppression has been one of their major responsibilities -- when Julius Caesar was captured by pirates in 76 BCE, the first thing he did after paying the pirates' ransom and being released was to fit out a squadron of ships to take his revenge. Despite piracy's importance and the continued frequency of piratical attacks, however, relatively few scholarly works have been written analyzing cases of modern piracy and piracy suppression in terms of varying strategic, policy, and operational decisions. This edited collection of case studies attempts to fill this gap. There have been a number of important historical studies that have dealt with the subjects of piracy and piracy suppression. Books written from the point of view of those wishing to end piracy have tended to focus on legal issues, including the rights of victims, the procedures and decisions of Admiralty courts in punishing pirates, and the capture of piracy ships as prizes. Others have looked at the existence of piracy in terms of one particular place or time period, with the Barbary Coast and the Caribbean Sea claiming disproportionate shares of attention. Pirates are often romanticized; Forbes magazine has recently listed history's top-earning pirates, including Samuel Black Sam Bellamy at US\$120 million (2008 dollars), Sir Francis Drake at US\$115 million, and Thomas Tew at US\$103 million. More famous pirates, like Edward Teach (Blackbeard), came in far down the list, at tenth place, with only US\$12.5 million.

Agroforestry in Sustainable Agricultural Systems Louise E. Buck, James P. Lassoie, Erick C.M. Fernandes, 1998-12-28 Agroforestry in Sustainable Agricultural Systems examines the environmental and social conditions that affect the roles and performance of trees in field- and forest-based agricultural production systems. Various types of ecological settings for agroforestry are analyzed within temperate and tropical regions. The roles of soil, water, light, nutrient and pest management in mixed, annual, woody perennial and livestock systems are discussed. Important new case studies from around the world offer innovative strategies that have been used successfully in raising forests and tree products on a sustainable basis for commercial harvesting and for providing other environmental services in land conservation and watershed management.

One Goal, Two Paths The World Bank, 2011-09-14 Despite the East Asia and Pacific (EAP) region's impressive economic growth, over 1 billion of its people still lack access to electricity and modern cooking solutions. To achieve universal access to modern energy by 2030, this book exhorts EAP countries to advance simultaneously on two paths: (1) accelerate programs for grid and off-grid electricity through appropriate policies and innovative technologies; and (2) scale up access to clean cooking fuels and efficient cooking stoves, particularly for biomass in poor rural areas.
