**Readings in Groupware and Computer-Supported Cooperative Work** Ronald M. Baecker,1993-01-13 This comprehensive introduction to the field represents the best of the published literature on groupware and computer-supported cooperative work (CSCW). The papers were chosen for their breadth of coverage of the field, their clarity of expression and presentation, their excellence in terms of technical innovation or behavioral insight, their historical significance, and their utility as sources for further reading. Taken as a whole, the papers and their introductions are a complete sourcebook to the field. This book will be useful for computer professionals involved in the development or purchase of groupware technology as well as for researchers and managers. It should also serve as a valuable text for university courses on CSCW, groupware, and human-computer interaction.

*Computer Supported Collaborative Learning* Claire O'Malley,2012-12-06 Although research in collaborative learning has a fairly long history, dating back at least to the early work of Piaget and Vygotsky, it is only recently that workers have begun to apply some of its findings to the design of computer based learning systems. The early generation of the!le systems focused on their potential for supporting individual learning: learning could be self paced; teaching could be adapted to individual learners' needs. This was certainly the promise of the later generation of intelligent tutoring systems. However, this promise has yet to be realised. Not only are there still some very difficult research problems to solve in providing adaptive learning systems, but there are also some very real practical constraints on the widespread take up of individualised computer based instruction. Reseachers soon began to realise that the organisational, cultural and social contexts of the classroom have to be taken into account in designing systems to promote effective learning. Much of the work that goes on in classrooms is collaborative, whether by design or not. Teachers also need to be able to adapt the technology to their varying needs. Developments in technology, such as networking, have also contributed to changes in the way in which computers may be envisaged to support learning. In September 1989, a group of researchers met in Maratea, Italy, for a NATO-sponsored workshop on Computer supported collaborative . learning. A total of 20 researchers from Europe (Belgium.

**Computer Supported Collaborative Writing** Mike Sharples,2012-12-06 M. Sharples 1. 1 The Collaborative Tradition Collaborative writing is nothing new. The description below is from the introduction to a book published in 1911: Every page, however, has been debated and passed by the three of us. Our usual method has been, first to pick up a subject that interested us, perhaps a subject we had been talking about for a long while, then to discuss it and argue over it, ashore and afloat, in company and by ourselves, till we came to our joint conclusion. Then on a rough day, in a set-to discussion, I would take down notes, which frequently amounted in length to more than half the finished article. From the notes I would make a rough draft, which, after more discussion, would be re written, and again, after revision, typewritten. We would go through the printer's proofs together and finally, after reading the matter in print, we have once more revised it for book publication. Collaboration could not be more thorough. (Reynolds, et al. 1911, p. x) The book, Seems So! A Working-class View of Politics, was written by an aca demic working closely with two fishermen.

**PowerPC Microprocessor Common Hardware Reference Platform** Apple Computer, Inc.,International Business Machines, Inc.,Motorola Corp.,2012-06-25 This book defines the architecture requirements and minimum system requirements for a computer system that is designed to become an open industry standard. These requirements provide a description of the devices, interfaces, and data formats required to design and build a PowerPC-based computer. This standard is designed to provide software compatibility for several operating environments. Systems built to these requirements can use industry-standard components currently found in IBM-compatible and Apple® Macintosh® personal computers. These systems are expected to run various future versions of operating systems including Apple Mac OSTM, IBM AIXTM and PowerPCTM Editions of IBM OS/2 Warp ConnectTM, Microsoft Windows NTTM Workstation, Novell NetwareTM, and SunSoft SolarisTM. This book is the primary source of information for anyone developing a hardware platform, an operating system, or hardware component to be part of these standard systems. It describes the hardware-to-operating-system interface that is essential to anyone building hardware platforms and provides the minimum system configurations that platform designers must meet when building a standard platform. Component manufacturers require this information to produce compatible chips and adapters to use on these platforms, and software developers require the information on mandatory functions and documented interfaces. The architecture is intended to support a range of PowerPC microprocessor-based system implementations including portable, desktop, and server class systems, and allows multiple operating-system implementations across a wide range of environments and functions. This enables new hardware and software enhancements that are necessary for the development of improved user interfaces, higher performance, and broader operating environments.
