Roman (The Innerworld Affairs Series, Book 6) Marilyn Campbell, 2015-05-12 Roman Locke's ability--to become invisible--makes him the perfect Innerworld spy. His new assignment: secretly observe parapsychologist Erin Breswell as she hunts down a power-hungry psychic criminal. But Roman's presence triggers a cat-like heat in Erin, which affects his invisibility control, forcing Roman to reveal himself in full Noronian mating fever. Neither Roman nor Erin desire the lifelong commitment the fever requires, but if they don't take drastic action, neither will survive the coming storm. THE INNERWORLD AFFAIRS SERIES, in order Romulus Falcon Gallant Gabriel Logan Roman Blaze

Solar PV Power Suneel Deambi, 2011-01-01 Solar photovoltaic (PV) technology has been successfully implemented in the remote regions of India for more than two decades now. It has various end-use applications like lighting, pumping water, and charging battery for multiple uses. However, recently, there has been a growing bias towards the use of PV grid connected power plants. The larger issue here is that of tracing a connection between solar energy and grid connectivity. This book provides an insight into the basic understanding of PV grid power plants from various end-use considerations. It also touches upon the policy, planning, marketing, and financing aspects vis-à-vis the performance indicators attained by different countries in the world. Various facets of solar power generation have been explored, which makes this publication an important intervention in the field of solar PV.

Solar Energy – History and Ways of Combating Modern Life Concerns Shawn Henry,2021-07-28

Today we see people going bonkers for not having electricity. Something as important as clothing and food, shelter, and other necessities, this too has its worth. What happens when you see a closed room with no source of ventilation? Obviously... you tend to lose the cool (metaphorically and literally). What did you do to make the environment better? Again, too obvious... open the windows and doors if any. But how about taking a situation in mind and figure out the source of hope. Just imagine that you are sitting in a room with AC on. Bruno, the only dog you are left with plays with a red balloon that flies from one corner to another. All of a sudden, power fails and there is no other source of generating electricity to combat a 45-degree Celsius temperature. How would you feel? What will you think of doing? Feeling, I would say wouldn't be great, right? However, what will you do – depends on two solutions. The first one being forgetting the situation, sweating and whining, and waiting for the power to resume. The second might be something better – make sure you do not experience the same pitying situation ever again. Let's dig right into it!

S.P.A.C.E James Moclair,2013-05-24 To address the vastness of our and other universes, the author of S.P.A.C.E has had to invent plausible planets and life forms and then construct structured spacetal communities. For these communities to communicate, the author has developed a universal communications system called the uni-net. In addition, as the story unfolds, it also reveals numerous revolutionary new space ships, drive systems, highly advanced weaponry and technology. Right from the first chapter, S.P.A.C.E immediately takes the reader into impressive SIFI action with the introduction of a callous nomadic space race that is known as Trilo-raptors. The trilo-raptors are known throughout the universe for their advanced technology and obsession with killing, mayhem and destruction. For some time this outrages behaviour has been monitored by the Universal Interplanetary Congress and in an extraordinary meeting, measures are discussed to curtail the trilo-raptors ways. However the meeting is interrupted by news that throws the trilo-raptors and the Universal Interplanetary Congress into direct conflict! This news also threatens the whole of the universe and in particular in inhabitants of the planet earth! After this and to its stunning conclusion, each chapter is filled with impressive SIFI that will delight even the hardest connoisseurs.

Bioelectrochemical Systems Prasun Kumar,Chandrasekhar Kuppam,2021-02-02 This book is the first in a two-volume set devoted to bioelectrochemical systems (BESs) and the opportunities that they may offer in providing a green solution to growing energy demands worldwide. In this first volume, established research professionals explain the underlying principles and processes of BESs, providing a thorough introduction to these systems before proceeding to address the roles of cathode catalysts and biocatalysts, biofilms, heterotrophic denitrification, and nanotechnology approaches. This volume forms a sound foundation for understanding the potential industrial applications of this technology, which include in particular the generation of high-value chemicals and energy using organic wastes. These applications are the focus of the second volume, where readers will find up-to-date information on microbial fuel cells and the use of microbial biofilm- and algae-based bioelectrochemical systems for bioremediation and co-generation of valuable chemicals. The book is designed for a broad audience, including undergraduates, postgraduates, energy researchers/scientists, policymakers, and anyone else interested in the latest developments in this field.

Power Generation and the Environment Anco S. Blazev,2021-01-07 Natural and man-made changes in the environment create a very complex picture. This book analyzes this picture and provides snapshots of different areas of interest and to make suggestions for future work on cleaning and stabilizing the Earth's

environment. Starting with conventional energy generation and moving on to renewable energies, this book analyzes and calculates their environmental impact and the lesser known aspects of their cradle-to-grave life cycle such as the irreversible environmental damage done during the manufacturing of solar and wind equipment and during the installation, operation, and decommissioning of large scale hydro, solar, and wind power plants.
