Agricultural Transformation in Ethiopia Atakilte Beyene, 2018-10-15 For thousands of years, Ethiopia has depended on its smallholding farmers to provide the bulk of its food needs. But now, such farmers find themselves under threat from environmental degradation, climate change and declining productivity. As a result, smallholder agriculture has increasingly become subsistence-oriented, with many of these farmers trapped in a cycle of poverty. Smallholders have long been marginalised by mainstream development policies, and only more recently has their crucial importance been recognised for addressing rural poverty through agricultural reform. This collection, written by leading Ethiopian scholars, explores the scope and impact of Ethiopia's policy reforms over the past two decades on the smallholder sector. Focusing on the Lake Tana basin in northwestern Ethiopia, an area with untapped potential for growth, the contributors argue that any effective policy will need to go beyond agriculture to consider the role of health, nutrition and local food customs, as well as including increased safeguards for smallholder's land rights. They in turn show that smallholders represent a vitally overlooked component of development strategy, not only in Ethiopia but across the global South.

Africa First! JAKKIE. CILLIERS, 2021-03-04 'A roadmap that could turn Africa's potential into prosperity.' - President Cyril Ramaphosa What stops Africa, with its abundant natural resources, from capitalising on its boundless potential? Africa analyst Jakkie Cilliers uses 11 scenarios to unpack, in concrete terms, how the continent can ignite a growth revolution that will take millions out of poverty and into employment. Africa urgently needs much more rapid economic growth. Cilliers identifies and models fundamental transitions required in agriculture, education, demographics, manufacturing and governance and shows how these changes can be brought about. The challenges the continent faces - competing in a globalised world, delivering health care and education, feeding growing populations and grappling with climate change - demand far-sighted policies and determined leadership. Cilliers offers achievable solutions based on African realities. Authoritative and engaging, this work offers a roadmap for how Africa can catch up with the rest of the world.

Prevention of Diabetes Peter Schwarz, Prasuna Reddy, 2013-06-24 Expertly authored by the world's leading specialists in the field, *Prevention of Diabetes* is the definitive guide for better preventative diabetes care. Using an evidence-based approach, it outlines the very latest in the identification of people at high risk for type 2 diabetes and how best to use interventional methods such as screening at-risk individuals, pharmaceutical intervention and lifestyle changes. In addition, it will provide healthcare professionals with the clinical knowledge required to clearly identify the early symptoms of diabetes, enabling them to provide their patients with better clinical care and helping avoid the onset of full-blown diabetes. Also covered are both the health economics of establishing, and the methods of implement/delivering targeted prevention programmes into clinical and health care practice, based on the vast experience of the editors due to their involvement in such programmes. *Prevention of Diabetes* provides clear and expert information in a practical, accessible way, and is ideal reading for all those with an interest in the prevention of diabetes and obesity, such as public health workers, specialists in diabetes and obesity, and GP's seeing patients with early onset or pre-diabetes symptoms.

Zimbabwe's Fast Track Land Reform Prosper B. Matondi, 2012-11-08 The Fast Track Land Reform Programme in Zimbabwe has emerged as a highly contested reform process both nationally and internationally. The image of it has all too often been that of the widespread displacement and subsequent replacement of various people, agricultural-related production systems, facets and processes. The reality, however, is altogether more complex. Providing new and much-needed empirical research, this in-depth book examines how processes such as land acquisition, allocation, transitional production outcomes, social life, gender and tenure, have influenced and been influenced by the forces driving the programme. It also explores the ways in which the land reform programme has created a new agrarian structure based on small- to medium-scale farmers. In attempting to resolve the problematic issues the reforms have raised, the author argues that it is this new agrarian formation which provides the greatest scope for improving Zimbabwe's agriculture and development. Based on a broader geographical scope than any previous study carried out on the subject, this is a landmark work on a subject of considerable controversy.

Understanding Complexity Gillian Ragsdell, Jennifer Wilby, 2012-12-06 Peter A. Coming Palo Alto, CA November, 2000 This volume represents a distillation of the plenary sessions at a unique millennial year event - a World Congress of the Systems Sciences in conjunction with the 44th annual meeting of the International Society for the Systems Sciences (ISSS). The overall theme of the conference was Understanding Complexity in the New Millennium. Held at Ryerson Polytechnic University in Toronto, Canada, from July 16-22, 2000, the conference included some 350 participants from over 30 countries, many of whom were representatives of the 21 organizations and groups that co-hosted this landmark event. Each of these co-host organizations/groups also presented a segment of the program, including a plenary speech. In addition, the conference featured a number of distinguished keynote speeches related to

the three daily World Congress themes: (1) The Evolution of Complex Systems, (2) The Dynamics of Complex Systems, and (3) Human Systems in the 21st Century. There were also seven special plenary-level symposia on a range of timely topics, including: The Art and Science of Forecasting in the Age of Global Warming; Capitalism in the New Millennium: The Challenge of Sustainability; The Future of the Systems Sciences; Global Issues in the New Millennium; Resources and the Environment in the New Millennium; The Lessons of Y2K; and Can There be a Reconciliation Between Science and Religion? Included in this special commemorative volume is a cross-section of these presentations.

Discrete Tomography Gabor T. Herman, Attila Kuba, 2012-12-06 Goals of the Book Over the last thirty years there has been a revolution in diagnostic radiology as a result of the emergence of computerized tomography (CT), which is the process of obtaining the density distribution within the human body from multiple x-ray projections. Since an enormous variety of possible density values may occur in the body, a large number of projections are necessary to ensure the accurate reconstruction of their distribution. There are other situations in which we desire to reconstruct an object from its projections, but in which we know that the object to be reconstructed has only a small number of possible values. For example, a large fraction of objects scanned in industrial CT (for the purpose of nondestructive testing or reverse engineering) are made of a single material and so the ideal reconstruction should contain only two values: zero for air and the value associated with the material composing the object. Similar assumptions may even be made for some specific medical applications; for example, in angiography of the heart chambers the value is either zero (indicating the absence of dye) or the value associated with the dye in the chamber. Another example arises in the electron microscopy of biological macromolecules, where we may assume that the object to be reconstructed is composed of ice, protein, and RNA. One can also apply electron microscopy to determine the presence or absence of atoms in crystalline structures, which is again a two-valued situation.

Engineering Rock Mass Classification R K Goel, Bhawani Singh, 2011-08-09 Rock mass classification methods are commonly used at the preliminary design stages of a construction project when there is very little information. It forms the bases for design and estimation of the required amount and type of rock support and groundwater control measures. Encompassing nearly all aspects of rock mass classifications in detail, Civil Engineering Rock Mass Classification: Tunnelling, Foundations and Landsides provides construction engineers and managers with extensive practical knowledge which is time-tested in the projects in Himalaya and other parts of the world in complex geological conditions. Rock mass classification is an essential element of feasibility studies for any near surface construction project prior to any excavation or disturbances made to earth. Written by an author team with over 50 years of experience in some of the most difficult mining regions of the world, Civil Engineering Rock Mass Classification: Tunnelling, Foundations and Landsides provides construction engineers, construction managers and mining engineers with the tools and methods to gather geotechnical data,

either from rock cuts, drifts or core, and process the information for subsequent analysis. The goal is to use effective mapping techniques to obtain data can be used as input for any of the established rock classification systems. The book covers all of the commonly used classification methods including: Barton's Q and Q' systems, Bieniawski's RMR, Laubscher's MRMR and Hoek's and GSI systems. With this book in hand, engineers will be able to gather geotechnical data, either from rock cuts, drifts or core, and process the information for subsequent analysis. Rich with international case studies and worked out equations, the focus of the book is on the practical gathering information for purposes of analysis and design. Identify the most significant parameters influencing the behaviour of a rock mass Divide a particular rock mass formulation into groups of similar behaviour, rock mass classes of varying quality Provide a basis of understanding the characteristics of each rock mass class Relate the experience of rock conditions at one site to the conditions and experience encountered at others Derive quantitative data and guidelines for engineering design Provide common basis for communication between engineers and geologists

Neonatal Neurology ,2019-07-17 Neonatal Neurology, Volume 162 in the Handbook of Clinical Neurology, series updates the reader on the latest advances in the study of neurological diseases diagnosed in the fetal and neonatal periods. With recent advances in magnetic resonance imaging, digital electroencephalography recording, and genetic testing and diagnosis, there is expanding awareness relating to early onset neurological conditions and how their early diagnosis can improve prediction of outcome and subsequent neurodevelopmental outcome. This new volume covers diagnosis and management of congenital conditions, including brain malformations, neuromuscular conditions and genetic epilepsies, as well as acquired injury related to peri-partum events, prematurity, critical illness and systemic diseases. Provides an in-depth understanding of the basic scientific research, translational research and clinical consensus across neonatal and fetal medicine Explores how early neurological diagnosis can improve prediction of outcome and how management can improve subsequent neurodevelopmental outcome Features chapters co-authored by two experts, combining expertise in both neonatal and fetal neurology

Secondary towns, agricultural prices, and intensification: Evidence from Ethiopia Vandercasteelen, Joachim,Tamru, Seneshaw,Minten, Bart,Swinnen, Johan,2017-03-01 Urbanization is happening fast in the developing world and especially so in sub-Saharan Africa where growth rates of cities are among the highest in the world. While cities and, in particular, secondary towns, where most of the urban population in sub-Saharan Africa resides, affect agricultural practices in their rural hinterlands, this relationship is not well understood. To fill this gap, we develop a conceptual model to analyze how farmers' proximity to cities of different sizes affects agricultural prices and intensification of farming. We then test these predictions using large-scale survey data from producers of teff, a major staple crop in Ethiopia, relying on unique data on transport costs and road networks and implementing an array of econometric models. We find that agricultural price behavior and intensification is determined by proximity to a city and the type of city. While proximity to cities has a strong positive effect on agricultural output prices and on uptake of modern inputs and yields on

farms, the effects on prices and intensification measures are lower for farmers in the rural hinterlands of secondary towns compared to primate cities.

Cardiovascular Risk Factors Armen Yuri Gasparyan, 2012-03-14 Cardiovascular risk factors contribute to the development of cardiovascular disease from early life. It is thus crucial to implement preventive strategies addressing the burden of cardiovascular disease as early as possible. A multidisciplinary approach to the risk estimation and prevention of vascular events should be adopted at each level of health care, starting from the setting of perinatology. Recent decades have been marked with major advances in this field, with the emergence of a variety of new inflammatory and immune-mediated markers of heightened cardiovascular risk in particular. The current book reflects some of the emerging concepts in cardiovascular pathophysiology and the shifting paradigm of cardiovascular risk estimation. It comprehensively covers primary and secondary preventive measures targeted at different age and gender groups. Attention is paid to inflammatory and metabolic markers of vascular damage and to the assessment of vascular function by noninvasive standardized ultrasound techniques. This is a must-read book for all health professionals and researchers tackling the issue of cardiovascular burden at individual and community level. It can also serve as a didactic source for postgraduate medical students.

Third International Conference on System Science in Health Care W. van Eimeren, R. Engelbrecht, C. D. Flagle, 2012-12-06 In the early stages of planning the Third International Conference in System Science in Health Care, the steering committee members, most of whom had participated in the first conference in Paris (1976) and the second in Montreal (1980), made some basic decisions about organization of subject matter. The earlier meetings had been very successful in bringing together specialists from the health professions and the traditional sciences. In addition to physicians and nurses, these were representatives of the disciplines of the behavioral sciences, system theory, economics, engineering, and the emergency fields of management science and informatics -all concerned with the development of health resources in a broad system context. The reported research and experience of the many disciplines represented had dealt with one or more of three concerns: 1) a major health problem, such as cardiovascular disease, or an important population at risk, such as the elderly or children or workers; 2) some generic aspect of organization and decision making, including trial and evaluation of innovative health strategies; and 3) the methodology of research and analysis in system of health service. The challenge to the conference organizers lay in the eliciting and arranging of experiences in such a way that the health services could be seen as purposeful, living, evolving systems.
