

Tech Center Labs

Clifford M. Gross,Joseph P. Allen

Tech Lab Jack Challoner,2019-10-01 This DK children's book for ages 11-14 is brimming with exciting, educational activities and projects that focus on electronics and technology. Keep your siblings out of your room with a brilliant bedroom alarm, power a propeller motorboat, make a thermoelectric phone charger, build a set of speakers, and construct a crane by following step-by-step instructions and using affordable equipment. Tech Lab will engage budding scientists and engineers as they experiment, invent, trial, and test technology, electronics, and mechanics at home. Simple steps with clear photographs take readers through the stages of each low-cost project, with fact-filled panels to explain the science behind each one, and to fascinate them with real-world examples. With an increasing focus across school curricula on encouraging children to explore STEM subjects (science, technology, engineering, and maths), Tech Lab is the perfect companion for any inquisitive child with an interest in how the worlds of science experiments and technology work, and why.

Science and technology the making of the Air Force Research Laboratory ,2000 This history documents a watershed event within the United States Air Force -- the creation of the Air Force Research Laboratory (AFRL). As the high technology service, the Air Force has always searched for ways to continuously improve its science and technology enterprise. In that context, the making of AFRL was not a bureaucratic accident. Rather, it was the product of a complex mixture of historical forces and pressures at work that convinced people at all levels that the time was ripe to bring about fundamental reform in how the Air Force conducts its business of science and technology. In terms of significance, a wealth of past studies has focused on almost every aspect of the operational side of the Air Force. But there has been a scarcity of available scholarly studies that address the far-reaching implications of science and technology. This book is a major contribution that helps fill that gap. Organization and infrastructure are critically important components of the total science and technology picture. Thus, the manner in which its laboratory system is organized is a critical factor in the Air Force's ability to assure that it is investing in and delivering the most relevant technologies possible. This book documents how the Air Force moved from 13 separate labs to one consolidated lab. The narrative is divided into two parts. Part one addresses the reasons why the Air Force decided to consolidate its far-flung science and technology enterprise into one lab. How the new lab was implemented is the focus of part two. This study is especially revealing because the reader is given access to the inner workings and struggles of a major Air Force organizational restructuring through interviews with key individuals who participated directly in the decision-making process to establish a single lab. A chronology of the lab's creation is included. (19 tables, 22 figures, 19 photographs).

Limited by Design Michael Crow,Barry Bozeman,1998-09-25 Limited by Design is the first comprehensive study of the varying roles played by the more than 16,000 research and development laboratories in the U.S. national innovation system. Michael Crow and Barry Bozeman offer policy makers and scientists a blueprint for making more informed decisions about how to best utilize and develop the capabilities of these facilities. Some labs, such as Bell Labs, Westinghouse, and Eastman Kodak, have been global players since the turn of the century. Others, such as Los Alamos National Laboratory, have been mainstays of the military/energy industrial complex since they evolved in the 1940s. These and other institutions have come to serve as the infrastructure upon which a range of industries have relied and have had a tremendous impact on U.S. social and economic history. Michael Crow and Barry Bozeman illustrate the histories, missions, structure, and behavior of individual laboratories, and explore the policy contexts in which they are embedded. In studying this large and varied collection of labs, Crow, Bozeman, and their colleagues develop a new framework for understanding the structure and behavior of laboratories that also provides a basis for rationalizing federal science and technology policy to create more effective laboratories. The book draws upon interviews and surveys collected from thousands of scientists, administrators, and policy makers, and features boxed lab windows throughout that provide detailed information on the variety of laboratories active in the U.S. national innovation system. Limited by Design addresses a range of questions in order to enable policy makers, university administrators, and scientists to plan effectively for the future of research and development.

Building a K-12 STEM Lab Deborah Kantor Nagler,Martha Osei-Yaw,2022-08-29 Gain insights and clear guidelines for developing the robust partnerships and processes you need to build a successful STEM lab in your school. Few resources are available for district and school leaders looking to establish successful STEM labs. Frequently, efforts do not gain traction because they lack a systemic approach and the support of a broad spectrum of stakeholders within the school community. Unlike other books, Building a K-12 STEM Lab addresses this challenge from the perspective of the leader, identifying opportunities for capacity building and ensuring equal access and equity for all students. This book will: • Address key issues in building a STEM Lab, including budgetary constraints, space limitations, technology design and resources, and inclusivity. • Provide step-by-step guidelines designed to meet the diverse needs of a wide range of educational environments. • Include vignettes describing the experiences of a variety of schools – public, private, rural, urban – at different levels – elementary, middle school, and high school – that have successfully established STEM labs in their schools. The comprehensive and flexible approach outlined in this book will help school and district leaders develop productive community partnerships in support of STEM education within the STEM lab and throughout the school.

The Role of the Federal Laboratories in Domestic Technology Transfer United States. Congress. House. Committee on Science and Technology. Subcommittee on Science, Research, and Technology,1979

Technology Transfer for Entrepreneurs Clifford M. Gross,Joseph P. Allen,2003-12-30 A toolbox for accessing federal laboratory innovations and financing the acquisition of new technologies with corporate equity, this book is also a guide to understanding the expertise of specific government laboratories. Entrepreneurs can rapidly accelerate the growth of their companies and become more competitive by acquiring federal laboratory innovations. This book is an indispensable resource for those who want access to the latest breakthrough technologies, most of which can be traced to universities and federally funded laboratories. These taxpayer-funded idea factories can and should be leveraged by companies for competitive advantage. The authors describe how the private sector can engage these labs as long-term strategic partners, as well as development partners for the ongoing, cost-effective improvement of new technologies. Jargon-free and succinct, this guide also explains how to benefit from knowledge of the current technology-transfer landscape in order to maximize this special private-public partnership. No country can equal

the United States in research and development assets. But the federal government is not always as successful as it could be in using its authority to encourage such partnerships. It is therefore up to the private sector—entrepreneurs as well as established companies seeking new growth outlets—exploit the information presented here. Included is a directory of federal laboratories with a synopsis of their expertise and contact information, along with copies of the breakthrough technology-transfer legislation that has made technology transfer possible.

Strategy for an Army Center for Network Science, Technology, and Experimentation National Research Council, Division on Engineering and Physical Sciences, Board on Army Science and Technology, Committee on Strategies for Network Science, Technology, and Experimentation, 2007-09-27 The U.S. military has committed to a strategy of network-centric warfare. As a result, the Army has become increasingly interested in the critical role of network science. To a significant extent, this interest was stimulated by an earlier NRC report, *Network Science*. To build on that book, the Army asked the NRC to conduct a study to define advanced operating models and architectures for future Army laboratories and centers focused on network science, technologies, and experimentation (NSTE). The challenges resulting from base realignment and closure (BRAC) relocations of Army research, development, and engineering resources—as they affected the NSTE program—were also to be a focus of the study. This book provides a discussion of what NSTE is needed by the Army; an examination of the NSTE currently carried out by the Army; an assessment of needed infrastructure resources for Army NSTE; and an analysis of goals, models, and alternatives for an NSTE center.

Science and the American Century Sally Gregory Kohlstedt, David Kaiser, 2013-03-14 The twentieth century was one of astonishing change in science, especially as pursued in the United States. Against a backdrop of dramatic political and economic shifts brought by world wars, intermittent depressions, sporadic and occasionally massive increases in funding, and expanding private patronage, this scientific work fundamentally reshaped everyday life. *Science and the American Century* offers some of the most significant contributions to the study of the history of science, technology, and medicine during the twentieth century, all drawn from the pages of the journal *Isis*. Fourteen essays from leading scholars are grouped into three sections, each presented in roughly chronological order. The first section charts several ways in which our knowledge of nature was cultivated, revealing how scientific practitioners and the public alike grappled with definitions of the “natural” as they absorbed and refracted global information. The essays in the second section investigate the changing attitudes and fortunes of scientists during and after World War II. The final section documents the intricate ways that science, as it advanced, became intertwined with social policies and the law. This important and useful book provides a thoughtful and detailed overview for scholars and students of American history and the history of science, as well as for scientists and others who want to better understand modern science and science in America.

Industry-Laboratory Partnerships National Research Council, Policy and Global Affairs, Board on Science, Technology, and Economic Policy, 1999-10-17 The Sandia National Laboratories asked the Board on Science, Technology, and Economic Policy (STEP) to hold a one-day symposium to review Sandia's proposal to develop a science and technology park. In light of the importance of industry-laboratory cooperation for the STEP Board's project on Government-Industry Partnerships for the Development of New Technologies, the Board convened a workshop bringing together executive branch officials, congressional staff, representatives from the private sector, and regional economists to discuss the Sandia S&T park initiative. The Sandia S&T Park, which Sandia National Laboratories, the City of Albuquerque, and the State of New Mexico are jointly developing, is a 285 acre site located adjacent to Sandia National Laboratories. Groundbreaking for the park took place in May, 1999.

Directory of Federal Laboratory and Technology Resources ,1994 Describes the individual capabilities of each of 1,900 unique resources in the federal laboratory system, and provides the name and phone number of each contact. Includes government laboratories, research centers, testing facilities, and special technology information centers. Also includes a list of all federal laboratory technology transfer offices. Organized into 72 subject areas. Detailed indices.

From Lab to Market S.K. Kasscieh, H.R. Radosevich, 2013-06-29 The topic of this book, the commercialization of public-sector technology, continues to grow in importance in the United States and similar societies. The issues involved are relevant to many roles including those of policy makers, managers, patent attorneys, licensing agents, and technical staff members of public technology sources. Institutions increasingly involved in the process include federal and other government laboratories and their related agencies, public universities and their state governments, public and private transfer agents and, of course, all the private recipients of public technology. Scarcely a day goes by without a significant event related to technology transfer and commercialization. The popular business press is regularly carrying articles addressing the issues, explaining new initiatives and describing events of notable success or failure.[1] As an example of current important events, the Technology Reinvestment Project (TRP) is formulating its initiatives to transfer public technology and promote technology-based public-private partnerships as a collaboration between the Advanced Research Projects Agency (ARPA), the National Institute of Standards and Technology (NIST), the National Science Foundation (NSF) the National Aeronautics and Space Administration (NASA), and the Department of Energy, Defense Programs (DOE/DP).
