Object-Oriented and Internet-Based Technologies Mathias Weske, Peter Liggesmeyer, 2004-12-07 Based on the Net. ObjectDays tradition of bringing together researchers from academia and industry on the one hand and system architects, developers, and users from industry and administration on the other hand, this year's conference took an international research perspective, so that we see the first volume of Net. ObjectDays main conference proceedings published in the Springer Lecture Notes in Computer Science series. This volume consists of 16 papers carefully selected in a rigorous reviewing process by an international program committee; to provide a concise overview, these papers are briefly described. In the Languages and Models session, Beate Ritterbach proposes a new language element for object-oriented programming languages that supports arbitrary value types. In her contribution Support for Value Types in an Object-Oriented Programming Language she describes the corresponding keywords, syntax, and consistency checks, thereby giving an impression of the look and feel of value types from an application programmer's perspective. Walter Binder and Jarle Hulaas look at portable CPU accounting and control in Java, which is based on program transformation techniques. In their paper Self-accounting as Principle for Portable CPU Control in Java periodically the threads of an application component aggregate the information of their respective CPU consumption within a shared account; scheduling functions make sure applications do not exceed their allowed CPU share.

Water Tech William Sarni, Tamin Pechet, 2013-10-08 This book unveils how the world in the twenty-first century will need to manage our most fundamental resource need, water. It outlines how stakeholders can improve water use in their homes, their businesses, and the world. In particular, it focuses on the role of stakeholders in crafting a twenty-first century paradigm for water. Investors not only drive innovation through direct investment in new technologies but also by highlighting risk and driving reporting and disclosure within the business community. Water Tech highlights the business drivers to address water related issues. These include business disruption, regulatory risk and reputational risk along with opportunities in the commercialization of innovative technologies such as desalination and water reuse and treatment. The authors argue that through increased attention on water scarcity through activities such as reporting and disclosure we are now accelerating innovation in the water industry. They show how we are just now capturing the true cost and value of water and this is creating opportunities for investors in the water sector. The text takes the reader through key aspects of emerging innovative technologies along with case studies and key issues on the path to commercialization. A roadmap of the opportunities in the water sector is presented based on interviews with leading authorities in the water field including innovators, investors, legal, regulatory experts and businesses.
