Janelle Monáe's "Dirty Computer" Dan Hassler-Forest,2022-01-11 This book offers an in-depth analysis of Janelle Monáe's Dirty Computer, an Afrofuturist project that appeared simultaneously as a concept album and a visual album or "emotion picture" in spring 2018. In the previous decade, Janelle Monáe has developed into a global media personality who effortlessly unites speculative world-building with social and political activism. Across the intersecting album and film that together make up Dirty Computer, Monáe brings together the science-fictional themes that informed her previous work, resulting in a powerfully focused artistic and political statement. While the music on the album can be enjoyed as an accessible collection of pop tracks, the accompanying film, music videos, and media paratexts add layers of meaning that combine speculative world-building with anti-racist activism. This unique convergence of energies, ideas, and media platforms has made Dirty Computer a new classic of Afrofuturist science fiction.

Virtual Unrealities Alfred Bester,2013-05-31 Dazzlement and enchantment are Bester's methods. His stories never stand still a moment. —Damon Knight, author of Why Do Birds Alfred Bester took science fiction into hyperdrive, endowing it with a wit, speed, and narrative inventiveness that have inspired two generations of writers. And nowhere is Bester funnier, speedier, or more audacious than in these seventeen short stories—two of them previously unpublished—that have now been brought together in a single volume for the

first time. Read about the sweet-natured young man whose phenomenal good luck turns out to be disastrous for the rest of humanity. Find out why tourists are flocking to a hellish little town in a post-nuclear Kansas. Meet a warlock who practices on Park Avenue and whose potions comply with the Pure Food and Drug Act. Make a deal with the Devil—but not without calling your agent. Dazzling, effervescent, sexy, and sardonic, Virtual Unrealities is a historic collection from one of science fiction's true pathbreakers. Alfred Bester was one of the handful of writers who invented modern science fiction. —Harry Harrison Alfred Bester (1913-1987) was the author of two of science fiction's seminal works, The Demolished Man and The Stars My Destination. He also wrote some fast-moving, sizzling short stories that were very highly regarded; many of them are included in the 17 stories showcased in Virtual Realities; two were never before published. Highlights include Disappearing Act, in which shell-shocked soldiers vanish from their hospital ward; Hobson's Choice, in which a statistician uncovers a disturbing population trend in post-nuclear Kansas; Time Is the Traitor, wherein powerful business people manipulate their most valuable consultant; and The Devil Without Glasses, a conspiracy tale with an X-Files feel. The science fiction and literary classic Fondly Fahrenheit stars wealthy Vandaleur and his mad android who has an unfortunate habit of turning murderous when the temperature gets too hot... All reet!

  Thinking Things Through, second edition Clark Glymour,2015-04-10 The second edition of a unique introductory text, offering an account of the logical tradition in philosophy and its influence on contemporary scientific disciplines. Thinking Things Through offers a broad, historical, and rigorous introduction to the logical tradition in philosophy and its contemporary significance. It is unique among introductory philosophy texts in that it considers both the historical development and modern fruition of a few central questions. It traces the influence of philosophical ideas and arguments on modern logic, statistics, decision theory, computer science, cognitive science, and public policy. The text offers an account of the

history of speculation and argument, and the development of theories of deductive and probabilistic reasoning. It considers whether and how new knowledge of the world is possible at all, investigates rational decision making and causality, explores the nature of mind, and considers ethical theories. Suggestions for reading, both historical and contemporary, accompany most chapters. This second edition includes four new chapters, on decision theory and causal relations, moral and political theories, "moral tools" such as game theory and voting theory, and ethical theories and their relation to real-world issues.   Thinking Things Through Clark N. Glymour,1997 Thinking Things Through provides a broad, historical, and rigorous introduction to the logical tradition in philosophy and to its contemporary significance. The presentation is centered around three of the most fruitful issues in Western thought: What are proofs, and why do they provide knowledge? How can experience be used to gain knowledge or to alter beliefs in a rational way? What is the nature of mind and of mental events and mental states? In a clear and lively style, Glymour describes these key philosophical problems and traces attempts to solve them, from ancient Greece to the present. Thinking Things Through reveals the philosophical sources of modern work in logic, the theory of computation, Bayesian statistics, cognitive psychology, and artificial intelligence, and it connects these subjects with contemporary problems in epistemology and metaphysics. The text is full of examples and problems, and an instructor's manual is available.Clark Glymour is Alumni Professor of Philosophy at Carnegie-Mellon University and Adjunct Professor of History and Philosophy of Science at the University of Pittsburgh.

  Digital Music Videos Steven Shaviro,2017-04-15 Music videos today sample and rework a century's worth of movies and other pop culture artifacts to

offer a plethora of visions and sounds that we have never encountered before. As these videos have proliferated online, they have become more widely accessible than ever before. In Digital Music Videos, Steven Shaviro examines the ways that music videos interact with and change older media like movies and gallery art; the use of technologies like compositing, motion control, morphing software, and other digital special effects in order to create a new organization of time and space; how artists use music videos to project their personas; and how less well known musicians use music videos to extend their range and attract attention. Surveying a wide range of music videos, Shaviro highlights some of their most striking innovations while illustrating how these videos are creating a whole new digital world for the music industry.

   The Science Fiction Hall of Fame, Volume One 1929-1964 Robert Silverberg,2018-02-06 The definitive collection of the best in science fiction stories between 1929-1964.   <u>Strangely Rhetorical</u> Jimmy Butts,2023-05-01 Strangely Rhetorical establishes the groundwork for strangeness as a lens under the broader interdisciplinary umbrella of rhetoric and composition and shares a series of rhetorical devices for practically thinking about how compositions are made unique. Jimmy Butts explores how strange, novel, weird, and interesting texts work and offers insight into how and why these forms can be invented, created, and stylized to generate the effective delivery of rhetorical messages in fun, divergent ways. Using a new theoretical framework—that strangeness is inherent within all rhetorical interactions and is potentially useful—Butts demonstrates how rhetoric is always already coming from an Other, offering an ethical context for how defamiliarized texts work with different audiences. Applying examples of seven figures for composing in and across written, aural, visual, electronic, and spatial texts (the WAVES of media), Butts shows how divergence is possible in all sorts of refigured multimodal ways. Strangely Rhetorical rethinks what exactly rhetoric is and does, considering the ways that strange compositions help rhetors connect across a broad range of networks in a world haunted by distance. This is a book about strange rhetoric for makers and creatives, for students and teachers, and for composers of all sorts.

But Synthia's also the only one who can help Maria battle against the creation of an android army. But the forces against them are growing—a threat more invasive than anything Synthia has encountered before. Tech Anxiety Christopher A. Sims,2013-05-28 This project examines the representation of anxiety about technology that humans feel when encountering artificial intelligences in four science fiction novels: Do Androids Dream of Electric Sheep?, Neuromancer, 2001: A Space Odyssey, and Cloud Atlas. By exploring this anxiety, something profound can be revealed about what it means to be a person living in a technologically saturated society. While many critical investigations of these novels focus on the dangerous and

negative implications of artificial intelligence, this work uses Martin Heidegger's later writings on technology to argue that AIs might be more usefully read as catalysts for a reawakening of human thought.

Teaching and Learning in a Digital World Michael E. Auer,David Guralnick,Istvan Simonics,2017-12-26 This book gathers the Proceedings of the 20th International Conference on Interactive Collaborative Learning (ICL2017), held in Budapest, Hungary on 27–29 September 2017. The authors are currently witnessing a significant transformation in the development of education. The impact of globalisation on all areas of human life, the exponential acceleration of technological developments and global markets,

and the need for flexibility and agility are essential and challenging elements of this process that have to be tackled in general, but especially in engineering education. To face these current real-world challenges, higher education has to find innovative ways to quickly respond to them. Since its inception in 1998, this conference has been devoted to new approaches in learning with a focus on collaborative learning. Today the ICL conferences offer a forum for exchange concerning relevant trends and research results, and for sharing practical experience gained while developing and testing elements of new technologies and pedagogies in the learning context.
