Targeted Drug Delivery : Concepts and Design Padma V. Devarajan,Sanyog Jain,2014-12-08 This authoritative volume explores the fundamental concepts and numerous applications of targeted delivery of drugs to the body. This compilation has been divided into eight sections comprised of the basic principles of drug targeting, disease and organ/organelle-based targeting, passive and active targeting strategies, and various advanced drug delivery tools such as functionalized lipidic, polymeric and inorganic nanocarriers. Together, the twenty-three chapters cover a wide range of topics in the field, including tumor and hepatic targeting, polymer-drug conjugates, nanoemulsion, physical and biophysical characteristics of nanoparticles, and in vivo imaging techniques, among others. The book also examines advanced characterization techniques, regulatory hurdles and toxicity-related issues that are key features for successful commercialization of targeted drug delivery system products. Targeted Drug Delivery is a comprehensive reference guide for drug delivery researchers, both beginners and those already working in the field.

Guidance on sustainable cricket farming - A practical manual for farmers and inspectors Hanboonsong, A. and Durst, P.,2020-12-15 This manual systematically describes basic management techniques needed to ensure best practices in raising crickets for food production. These techniques are based on 20 years of practical experience in cricket farming in Thailand, and previously unpublished data and knowledge collected by the author and support team. Robust research data related to cricket farming is still lacking, but will undoubtedly increase over time. However, in the interim, the growing cricket farming sector can be enhanced through the application of known best practices and related guidance.

Technological Competency as Caring in Nursing Rozzano C. Locsin,2005 Nurses use and encounter technology in nearly every aspect of their profession. What does it mean to be technologically competent and caring as a nurse? How does technology support nursing work? How does it hinder nursing work? How can nurses care for their patients as technological advancements are introduced nearly every day? *Technological Competency as Caring in Nursing: A Model for Practice* provides insight and answers into how nurses can and must be both technologically competent and caring as they provide meaningful and essential nursing care. Locsin's work is obviously guided by the question asked by thoughtful nurses everywhere: How can I satisfactorily reconcile the idea of competent use of technology with the idea of caring in nursing? The chapters in this book significantly embellish a practical understanding of the solution offered by the Locsin model, and indeed, enrich the practical value of all of the general theories of nursing that are grounded in caring. Savina O. Schoenhofer, RN, PhD Professor, Department of Graduate Nursing Alcorn State University, Natchez, Mississippi, USA, Technological competency as caring in nursing is a critical process of knowing persons wholeness. Dr. Locsin's book explores, clarifies, and advances the conception of technological competency as caring in nursing. His book is essential to modeling a practice of nursing from the perspective of caring in nursing and a practical illumination of excellent nursing in a technological world.

Spatial and Syndromic Surveillance for Public Health Andrew B. Lawson,Ken Kleinman,2005-05-13 Following the events of 9/11 and in the current world climate, there is increasing concern of the impact of potential bioterrorism attacks. Spatial surveillance systems are used to detect changes in public health data, and alert us to possible outbreaks of disease, either from natural resources or from bioterrorism attacks. Statistical methods play a key role in spatial surveillance, as they are used to identify changes in data, and build models of that data in order to make predictions about future activity. This book is the first to provide an overview of all the current key methods in spatial surveillance, and present them in an accessible form, suitable for the public health professional. It features an abundance of examples using real data, highlighting the practical application of the methodology. It is edited and authored by leading researchers and practitioners in spatial surveillance methods. Provides an overview of the current key methods in spatial surveillance of public health data. Includes coverage of both single and multiple disease surveillance. Covers all of the key topics, including syndromic surveillance, spatial cluster detection, and Bayesian data mining.

Hyperedge Replacement: Grammars and Languages Annegret Habel,1992-12-08 The area of graph grammars is theoretically attractive and well motivated by various applications. More than 20 years ago, the concept of graph grammars was introduced by A. Rosenfeld as a formulation of some problems in pattern recognition and image processing, as well as by H.J. Schneider as a method for data type specification. Within graph-grammar theory one may distinguish the set-theoretical approach, the algebraic approach, and the logical approach. These approaches differ in the method in which graph replacement is described. Specific approaches, node replacement and hyperedge replacement, concern the basic units of a hypergraph, nodes and hyperedges. This monograph is mainly concerned with the hyperedge-replacement approach. Hyperedge-replacement grammars are introduced as a device for generating hypergraph languages including graph languages and string languages. The concept combines a context-free rewriting with a comparatively large generative power. The volume includes a foreword by H. Ehrig.

High-level Petri Nets Kurt Jensen,Grzegorz Rozenberg,2012-12-06 High-level Petri nets are now widely used in both theoretical analysis and practical modelling of concurrent systems. The main reason for the success of this class of net models is that they make it possible to obtain much more succinct and manageable descriptions than can be obtained by means of low-level Petri nets-while, on the other hand, they still offer a wide range of analysis methods and tools. The step from low-level nets to high-level nets can be compared to the step from assembly languages to modern programming languages with an elaborated type concept. In low-level nets there is only one kind of token and this means that the state of a place is described by an integer (and in many cases even by a boolean value). In high-level nets each token can carry complex information which, e. g. , may describe the entire state of a process or a data base. Today most practical applications of Petri nets use one of the different kinds of high-level nets. A considerable body of knowledge exists about high-level Petri nets this includes theoretical foundations, analysis methods and many applications. Unfortunately, the papers on high-level Petri nets have been scattered throughout various journals and collections. As a result, much of this knowledge is not readily available to people who may be interested in using high-level nets.

Tropical Diseases of Legumes Julio Bird,2012-12-02 Tropical Diseases of Legumes consists of papers presented at a workshop held at Rio Piedras Agricultural Station, University of Puerto Rico, in June 1974. Legumes are group of plants that provide an important and often sole source of protein in the diet of millions of people. In the growing problem of hunger, there is an immediate need to raise the production of legumes through better knowledge of plant diseases, by ultimate prevention of these diseases, and through improved crop production. Consequently, a workshop is organized and the presented papers, grouped into four parts, are shown in this book. The first two parts describe the rugaceous and mosaic diseases. Bacterial diseases, chemical control, and ecology of pathogens are explained in the third part of this book. The last part explores the origin and improvement of the common bean, as well as its diseases in the tropical Americas. This book aims to provide a stimulating forum for discussion of the findings and observations in tropical legume disease research.

The Steiner Tree Problem F.K. Hwang,D.S. Richards,P. Winter,1992-10-20 The Steiner problem asks for a shortest network which spans a

given set of points. Minimum spanning networks have been well-studied when all connections are required to be between the given points. The novelty of the Steiner tree problem is that new auxiliary points can be introduced between the original points so that a spanning network of all the points will be shorter than otherwise possible. These new points are called Steiner points - locating them has proved problematic and research has diverged along many different avenues. This volume is devoted to the assimilation of the rich field of intriguing analyses and the consolidation of the fragments. A section has been given to each of the three major areas of interest which have emerged. The first concerns the Euclidean Steiner Problem, historically the original Steiner tree problem proposed by Jarník and Kőssler in 1934. The second deals with the Steiner Problem in Networks, which was propounded independently by Hakimi and Levin and has enjoyed the most prolific research amongst the three areas. The Rectilinear Steiner Problem, introduced by Hanan in 1965, is discussed in the third part. Additionally, a fourth section has been included, with chapters discussing areas where the body of results is still emerging. The collaboration of three authors with different styles and outlooks affords individual insights within a cohesive whole.

String-Rewriting Systems Ronald V. Book, Friedrich Otto, 2012-12-06 The subject of this book is string-rewriting systems. It is generally accepted that string-rewriting was first introduced by Axel Thue in the early part of this century. In the 1960's and early 1970's, it received renewed attention due to interest in formal language theory. In the 1980's and 1990's, it has received more interest since it can be viewed as a special case of term rewriting, a subject that has become important in the study of automated deduction. Today, string-rewriting is studied by researchers in theoretical computer science and also by researchers interested in the foundations of artificial intelligence. A sketch of the way that the subject has developed is contained in Chapter 0, and the reader is advised to begin with that chapter. Both authors have been active in the field and have lectured on the subject in several universities. Lecture notes have been produced and distributed. This monograph is a result of revising and rewriting those notes. It represents an attempt by the authors to present the concepts that the authors consider to be most fundamental and to gather together the most useful results in such a way that they can be understood and used in studies relating to more general rewriting, to automated deduction, and to algorithmic problems of algebraic structures. This monograph is written for independent study by researchers in the theoretical computer science or in the foundations of artificial intelligence.

Attribute Grammars Pierre Deransart, Martin Jourdan, Bernard Lorho, 1988-08-10 This book treats the problem of formulating models in mathematical programming, and thereafter solving the resulting model. Particular emphasis is placed on the interaction between the two. The topic is viewed from different angles, namely linear programming (Walter Murray), integer programming (Ellis Johnson), network flows (John Mulvey), and stochastic programming (Roger J-B Wets). The book will be very useful for any mathematics programmer or operations researcher who works in the field of real-world modelling. The book is an important part of any university course in modelling, particularly in operations research, economics and business. The book also contains an article on the origins of mathematical programming (Alexander Rinnooy Kan). This is important reading for anyone interested in the history of the field.

Specification of Abstract Data Types Jacques Loeckx, Hans-Dieter Ehrich, Markus Wolf, 1996 Specification of Abstract Data Types provides an authoritative introduction to the mathematical foundations of algebraic program specification. Unlike most other publications on the subject, this book does not draw on category theory, but instead tries to demystify the topic and promote its use in practical applications. It clearly distinguishes between the study of algebras, logic, specification methods and specification languages and it avoids focusing on a particular logic or a particular specification method. While treating the subject with mathematical precision, the book contains numerous examples, exercises and comments to provide a deeper understanding of concepts discussed. It was conceived as a student textbook but will also be a useful source of reference for researchers and developers using formal specification methods for software design.

Random Trees Michael Drmota, 2009-04-16 The aim of this book is to provide a thorough introduction to various aspects of trees in random settings and a systematic treatment of the mathematical analysis techniques involved. It should serve as a reference book as well as a basis for future research.

Reactive Systems Luca Aceto, Anna Ingólfssdóttir, Kim Guldstrand Larsen, Jiri Srba, 2007-08-09 Formal methods is the term used to describe the specification and verification of software and software systems using mathematical logic. Various methodologies have been developed and incorporated into software tools. An important subclass is distributed systems. There are many books that look at particular methodologies for such systems, e.g. CSP, process algebra. This book offers a more balanced introduction for graduate students that describes the various approaches, their strengths and weaknesses, and when they are best used. Milner's CCS and its operational semantics are introduced, together with notions of behavioral equivalence based on bisimulation techniques and with variants of Hennessy-Milner modal logics. Later in the book, the presented theories are extended to take timing issues into account. The book has arisen from various courses taught in Iceland and Denmark and is designed to give students a broad introduction to the area, with exercises throughout.

Portable Programming Peter J. L. Wallis, 1982

Fuzzy Sets and Applications Lotfi Asker Zadeh, 1987-05-08 This volume contains the most significant papers written by L. A. Zadeh, who in 1965 introduced the concept of a fuzzy set. Fuzzy set theory has become the foundation for the development of the fields of artificial intelligence and expert systems, especially in the applications of knowledge-based systems. As such, Zadeh's work has influenced researchers around the world. Zadeh has cooperated with editors in choosing the papers presented here, and the editors have provided an introduction for each paper. Topics covered include probability measures of fuzzy events, similarity relations and fuzzy orderings, a fuzzy-algorithmic approach to the definition of complex or imprecise concepts, and much more.
