Crafting a Symphony in Wood Elizabeth Ellen Ostring,2016-11-18 Anton Sie, twice successful in achieving his aspirations in music and physics, demonstrates that focus and diligent hard work can achieve great goals. But his story also shows the inter-connectedness of humanity: Anton received his musical training in Indonesia from a virtually illiterate Muslim peasant guitarist and a Jewish refugee violinist, and his knowledge of physics and acoustics from Chinese Communist scientists. He has demonstrated a critical factor in the superior construction of Stradivarius violins, his work authenticated by Western musicians for whom he is very grateful.

Handbook of Cultural Intelligence Research David C. Thomas,Yuan Liao,2023-03-10 Promoting a greater understanding of intercultural interactions, this timely and engaging Research Handbook provides an overview of the current state of research on cultural intelligence and analyzes its prospects for the future. Including contributions from key researchers in the field as well as those with a more critical perspective, this comprehensive Research Handbook addresses the conceptual backdrop, the measurement and the antecedents of cultural intelligence. It further examines the outcomes associated with cultural intelligence, offers a higher-level analysis of the concept, and concludes with an evaluation of the future research prospects of cultural intelligence. All in all, the Handbook investigates the heightened importance of intercultural interactions among individuals, groups, organizations, and societies in an increasingly interconnected global community. Covering a wide range of perspectives on cultural intelligence and related constructs, this Research Handbook will be essential reading for students, scholars, and researchers in the areas of employment relations, international business, international and cross-cultural management, occupational psychology, and organizational behavior.

Foundations of Fuzzy Logic and Semantic Web Languages provides a rigorous and succinct account of the mathematical methods and tools used for representing and reasoning with fuzzy information within Semantic

Trauma and Resilience in Contemporary Australian Policing Andrew Paterson,2021-08-18 This book examines how fifty police officers in South Australia keep well and “bounce back” from duty-related traumatic experience in the absence of practical, accessible and timely organisational support. It investigates mechanisms police officers presently use to “normalise” their duty-related traumatic experiences to preserve the delicate professional balance between “coping” and “psychic numbing” and avoid the much publicised perils of a PTSD diagnosis, while being appropriately responsive to colleagues, victims and survivors in their daily work environment. By revealing how police officers manage trauma—outside of the expectations of mental health professionals, union representatives and police leadership—innovative approaches and recommendations are offered to support first responders in moving from assumptions of post-traumatic stress and through post-traumatic growth. The book considers recent advances in post-traumatic growth and resilience theory and reinterprets exposure in a positive context, as well as preventative experiences in Australia and internationally.

Hepatitis B and D Protocols Robert K. Hamatake,Johnson Y. N. Lau,2008-02-01 Despite the availability of an effective vaccine, there are still 400 million people, worldwide who are chronically infected with

hepatitis B virus (HBV). For them, the vaccine, as currently applied, has no value. Given the possible consequences of HBV infection, the number of those chronically infected with HBV presents an enormous public health challenge. For example, the major etiology of hepatocellular carcinoma (HCC) is chronic infection with HBV. Although fifth in cancer incidence, worldwide, HCC/liver cancer is the third leading cause of cancer death. The high mortality associated with HCC arises because the disease is often detected late and is unresponsive to treatment. The number of deaths caused by PHCC is expected to rise over the next 20 years. Those chronically infected with HBV have a life risk of death to HCC of between 10 and 25%. Even the limited efficacy of drugs for the treatment of chronic HBV helps underscore the point that this disease is responsive to therapy. Drugs that target the polymerase (e. g. , hepsara and lamivudine) and interferon alpha represent two distinct strategies and show that both conventional antiviral and immunotherapeutic approaches can be used in management. However, the current inventory of therapeutics is inadequate. Interferon alpha is of limited value, only parenterally available, and fraught with adverse reactions.

Ontology-Driven Software Development Jeff Z. Pan,Steffen Staab,Uwe Aßmann,Jürgen Ebert,Yuting Zhao,2012-12-22 This book is about a significant step forward in software development. It brings state-of-the-art ontology reasoning into mainstream software development and its languages. Ontology Driven Software Development is the essential, comprehensive resource on enabling technologies, consistency checking and process guidance for ontology-driven software development (ODSD). It demonstrates how to apply ontology reasoning in the lifecycle of software development, using current and emerging standards and technologies. You will learn new methodologies and infrastructures, additionally illustrated using detailed industrial case studies. The book will help you: Learn how ontology reasoning allows validations of structure models and key tasks in behavior models. Understand how to develop ODSD guidance engines for important software development activities, such as requirement engineering, domain modeling and process refinement. Become familiar with semantic standards, such as the Web Ontology Language (OWL) and the SPARQL query language. Make use of ontology reasoning, querying and justification techniques to integrate software models and to offer guidance and traceability supports. This book is helpful for undergraduate students and professionals who are interested in studying how ontologies and related semantic reasoning can be applied to the software development process. In addition, it will also be useful for postgraduate students, professionals and researchers who are going to embark on their research in areas related to ontology or software engineering.

The Mark and the Void Paul Murray, 2015-10-20 What links the Investment Bank of Torabundo, www.myhotswaitress.com (yes, with an s, don't ask), an art heist, a novel called *For the Love of a Clown*, a six-year-old boy with the unfortunate name of Remington Steele, a lonely French banker, a tiny Pacific island, and a pest control business run by an ex-KGB agent? *The Mark and the Void* is Paul Murray's madcap new novel of institutional folly, following the success of his wildly original breakout hit, *Skippy Dies*. While marooned at his banking job in the bewilderingly damp and insular realm known as Ireland, Claude Martingale is approached by a down-on-his-luck author, Paul, looking for his next great subject. Claude finds that his life gets steadily more exciting under Paul's fictionalizing influence; he even falls in love with a beautiful waitress. But Paul's plan is not what it seems—and neither is Claude's employer, the Investment Bank of Torabundo, which swells through dodgy takeovers and derivatives trading until—well, you can probably guess how that shakes out. *The Mark and the Void* is the funniest novel ever written about the recent financial crisis, and a stirring examination of the deceptions carried out in the names of art and commerce.

The Sound Book: The Science of the Sonic Wonders of the World Trevor Cox, 2014-02-10 “A lucid and passionate case for a more mindful way of listening. . . . Anyone who has ever clapped, hollered or yodeled at an echo will delight in [Cox's] zestful curiosity.”—New York Times Trevor Cox is on a hunt for the sonic wonders of the world. A renowned expert who engineers classrooms and concert halls, Cox has made a career of eradicating bizarre and unwanted sounds. But after an epiphany in the London sewers, Cox now revels in exotic noises—creaking glaciers, whispering galleries, stalactite organs, musical roads, humming dunes, seals that sound like alien angels, and a Mayan pyramid that chirps like a bird. With forays into archaeology, neuroscience, biology, and design, Cox explains how sound is made and altered by the environment, how our body reacts to peculiar noises, and how these mysterious wonders illuminate sound's surprising dynamics in everyday settings—from your bedroom to the opera house. *The Sound Book* encourages us to become better listeners in a world dominated by the visual and to open our ears to the glorious cacophony all around us.

Robot Control 1991 (SYROCO'91) I. Troch, 2014-05-23 This volume contains 92 papers on the state-of-the-art in robotics research. In this volume topics on modelling and identification are treated first as they build the basis for practically all control aspects. Then, the most basic control tasks are discussed i.e. problems of inverse kinematics. Groups of papers follow which deal with various advanced control aspects. They range from rather general methods to more specialized topics such as force control and control of hydraulic robots. The problem of path planning is addressed and strategies for robots with one arm, for mobile robots and for multiple arm robots are presented. Also covered are computational improvements and software tools for simulation and control, the integration of sensors and sensor signals in robot control.

Entrepreneurship in Power Semiconductor Devices, Power Electronics, and Electric Machines and Drive Systems Krishnan Ramu, 2020-12-07 *Entrepreneurship in Power Semiconductor Devices, Power Electronics, and Electric Machines and Drive Systems* introduces the basics of entrepreneurship and a methodology for the study of entrepreneurship in electrical engineering and other engineering fields. Entrepreneurship is considered here in three fields of electrical engineering, viz. power semiconductor devices, power electronics and electric machines and drive systems, and their current practice. It prepares the reader by providing a review of the subject matter in the three fields, their current status in research and development with analysis aspect as needed, thus allowing readers to gain self-sufficiency while reading the book. Each field's emerging applications, current market and future market forecasts are

introduced to understand the basis and need for emerging startups. Practical learning is introduced in: (i) power semiconductor devices entrepreneurship through the prism of 20 startups in detail, (ii) power electronics entrepreneurship through 28 startup companies arranged under various application fields and (iii) electric machines and drive systems entrepreneurship through 15 startups in electromagnetic and 1 in electrostatic machines and drive systems. The book: (i) demystifies entrepreneurship in a practical way to equip engineers and students with entrepreneurship as an option for their professional growth, pursuit and success; (ii) provides engineering managers and corporate-level executives a detailed view of entrepreneurship activities in the considered three fields that may potentially impact their businesses, (iii) provides entrepreneurship education in an electrical engineering environment and with direct connection and correlation to their fields of study and (iv) endows a methodology that can be effectively employed not only in the three illustrated fields of electrical engineering but in other fields as well. This book is for electrical engineering students and professionals. For use in undergraduate and graduate courses in electrical engineering, the book contains discussion questions, exercise problems, team and class projects, all from a practical point of view, to train students and assist professionals for future entrepreneurship endeavors.
