Marina Carrillo

The Spoken Language Translator Manny Rayner,2000-08-28 This book describes the Spoken Language Translator (SLT), one of the first major projects in the area of automatic speech translation.

Overview of Translation Tools – Benefits of Translation Memory Management Software for an International Company Marina Carrillo,2007-07-07 Diploma Thesis from the year 2007 in the subject Computer Science – Software, grade: 2,3, University of Applied Sciences Ansbach, 60 entries in the bibliography, language: English, abstract: “TRANSLATION is very much like copying paintings.” These are the words of Boris Pasternak (1890-1960), a Russian Poet, Novelist and Translator. The key to translation is not only understanding and being fluent in more than one language and having an understanding of language and culture, but also being able to convey the meaning of the text in one language into the other. However, just the knowledge of different languages is not enough to succeed in the competing world scene of translation. Through the immense development of the Internet, information technology, and ongoing globalization, “translation complexity takes a quantum leap” and forces today’s translators to use computer technology, advanced software applications, and computer-aided translation tools to meet enhanced translation requirements in a timely manner. In order to be successful translator in today’s fast turn around times, the knowledge of and skills in different translation facilitating programs are essential. Translation is a difficult process, which requires computer and software skills in addition to proficiency. The translation business is quickly becoming one of the fastest growing markets in the world, and as a result, translators must develop efficiencys in their processes to meet the increasing demand and to be able to offer competitively priced services. The purpose of this thesis is to analyze the major translation tools available in the marketplace and to illustrate how they benefit the translator in multiple ways. This thesis will combine the essential knowledge of these different software tools and provide the important criteria required to choose the appropriate foreign language translation software.

User-Centered Translation Tytti Suojanen,Kaisa Koskinen,Tiina Tuominen,2014-12-05 Translators want to take their readers into account, but traditional translation theory does not offer much advice on how to do that. User-Centered Translation (UCT) offers practical tools and methods to help empower translators to act for their readers. This book will help readers to: Create mental models such as personas; Test translations with usability testing methods; Carry out reception research. Including assignments, case studies and real-life scenarios ranging from the translation of user instructions and EU texts to literary and audiovisual translation, this is an essential guide for students, translators and researchers.

Machine Translation and the Lexicon Petra Steffens,1995-03-06 This volume constitutes the proceedings of the Third International Workshop of the European Association for Machine Translation, held in Heidelberg, Germany in April 1993. The EAMT Workshops traditionally aim at bringing together researchers, developers, users, and others interested in the field of machine or computer-assisted translation research, development and use. The volume presents thoroughly revised versions of the 15 best workshop contributions together with an introductory survey by the volume editor. The presentations are centered primarily on questions of acquiring, sharing, and managing lexical data, but also address aspects of lexical description.

Environmental Noise Pollution Enda Murphy,Eoin King,2014-04-21 Environmental Noise Pollution: Noise Mapping, Public Health and Policy addresses the key debates surrounding environmental noise pollution with a particular focus on the European Union. Environmental noise pollution is an emerging public policy and environmental concern and is considered to be one of the most important environmental stressors affecting public health throughout the world. This book examines environmental noise pollution, its health implications, the role of strategic noise mapping for problem assessment, major sources of environmental noise pollution, noise mitigation approaches, and related procedural and policy implications. Drawing on the authors' considerable research expertise in the area, the book is the first coherent work on this major environmental stressor, a new benchmark reference across disciplinary, policy and national boundaries. Highlights recent developments in the policy arena with particular focus on developments in the EU within the context of the European Noise Directive Explores the lessons emerging from nations within the EU and other jurisdictions attempting to legislate and mitigate against the harmful effects of noise pollution Covers the core theoretical concepts and principles surrounding the mechanics of noise pollution as well as the evidence-base linking noise with public health concerns
