Technology and Responsibility P.T. Durbin,2013-03-09 Since it may seem strange for a new series to begin with volume 3, a word of explanation is in order. The series, Philosophy and Technology, inaugurated in this form with this volume, is the official publication of the Society for Philosophy & Technology. Approximately one volume each year is tobe published, alternating between proceedings volumes - taken from contributions to biennial international conferences of the Society - and miscellaneous volumes, with roughly the character of a professional society journal. The forerunners of the series in its present form were two proceedings volumes: Philosophy and Technology (1983), edited by Paul T. Durbin and Friedrich Rapp, and Philosophy and Technology //: Information Technology and Computers in Theory and Practice (1986), edited by Carl Mitcham and Alois Huning - both published (as volumes 80 and 90, respectively) in the series, Boston Studies in the Philosophy of Science. The Society for Philosophy & Technology, now more than ten years old, is devoted to the promotion of philosophical schalarship that deals in one way or another with technology and technological society. Philosophical scholarship is interpreted broadly as including contribu tions from any and all perspectives; the one requirement is that the schalarship be sound, and all contributions to the series are subject to rigorous blind refereeing. Technology, the other half of the philos ophy-and-technology pairing, is also construed broadly.

Praxiology and the Philosophy of Technology Wojciech W. Gasparski,Timo Airaksinen,2021-09-30 Technology is a crucial feature of the modern world, and human beings are necessarily technological creatures. Our goal must be to use technology effectively, efficiently, and ethically. We have hands that are adept at using tools, and intelligence that guides our actions. We also have desires and emotions that motivate us to achieve more and more, never allowing us to stop.From the viewpoint of praxiology, technology does not exist merely to satisfy the human need in an effective and efficient way. The problems of the modern world and the questions we must ask with respect to technology and how it is used are complicated and demanding. They may initially seem mysterious, perhaps even partly subconscious. In this fifteenth volume of a distinguished international series, contributors address essential questions about the philosophy and ethics of technology. Their intention is to point out the road not only to its better applications but also to its greater understanding.The first part of the book addresses general questions about the theory of technology. The second part of the volume focuses on special topics like information and communication technologies and work systems, as well as the foundations of problem solving and the history of innovation in the age of enlightenment. The third part of the book is on ethical judgments. It emphasizes the importance of ethics in the application of technology and, especially, when we commercialize it in order to meet the needs of the people in a free market society. This volume offers its reader a balanced picture of the state of the art of theoretical and applied issues in technology research--emphasizing the praxiological perspective that characterizes the entire series.

Race After Technology Ruha Benjamin,2019-07-09 From everyday apps to complex algorithms, Ruha Benjamin cuts through tech-industry hype to understand how emerging technologies can reinforce White supremacy and deepen social inequity. Benjamin argues that automation, far from being a sinister story of racist programmers scheming on the dark web, has the potential to hide, speed up, and deepen discrimination while appearing neutral and even benevolent when compared to the racism of a previous era. Presenting the concept of the "New Jim Code," she shows how a range of discriminatory designs encode inequity by explicitly amplifying racial hierarchies; by ignoring but thereby replicating social divisions; or by aiming to fix racial bias but ultimately doing quite the opposite. Moreover, she makes a compelling case for race itself as a kind of technology, designed to stratify and sanctify social injustice in the architecture of everyday life. This illuminating guide provides conceptual tools for decoding tech promises with sociologically informed skepticism. In doing so, it challenges us to question not only the technologies we are sold but also the ones we ourselves manufacture. Visit the book's free Discussion Guide here.

Effect of the Japanese Patent System on American Business United States. Congress. Senate. Committee on Commerce, Science, and Transportation. Subcommittee on Foreign Commerce and Tourism,1988

Software Patents Knut Blind,Jakob Edler,Michael Friedewald,2005-01-01 There has been continued debate in Europe over whether to change the patentability of software - or so-called computer-implemented inventions - and to follow the US model of allowing software patents. The European debate has shown a severe lack of empirical analysis on the possible impact of software patenting that goes beyond interest-driven rhetoric. This book seeks to address this shortcoming by taking a two-fold approach. Firstly, a survey of German software companies provides a representative overview of both general strategies to protect inventions and opinions regarding the future IPR regime in the context of innovation strategies - including the importance and use of Open Source software. Secondly, a series of case studies illustrate the varying impacts that patents and other protection strategies can have in specific contexts. This book provides both a theoretical overview of the economic impacts and policy implications of software patents, and an empirical foundation upon which to base a discussion on how to shape the intellectual property regime for software.

Children, Technology and Culture Ian Hutchby,Jo Moran-Ellis,2013-12-02 Childhood is increasingly saturated by technology: from television to the Internet, video games to 'video nasties', camcorders to personal computers. Children, Technology and Culture looks at the interplay of children and technology which poses critical questions for how we understand the nature of childhood in late modern society. This collection brings together researchers from a range of disciplines to address the following four aspects of this relationship between children and technology: *children's access to technologies and the implications for social relationships *the structural contexts of children's engagement with technologies with a focus on gender and the family *the situatedness of children's interactions with technological objects *the constitution of children and childhood through the mediations of technology _ This book represents a substantial contribution to contemporary social scientific thinking both about the nature of children and childhood, the social impacts of technologies and the various relationships between the two.

History of Technology Ian Inkster,2010-06-15 The common question from the western point of view is of the sort; why did China lose its early leadership of productive technologies to Europe during the early modern period? Answers to this seemingly clear enquiry vary from general cultural inwardness to the interferences of imperial governance. This collection surveys such theories but alters the issue by raising the notion that Chinese technologies did not so much

fail as move along a path different from that of Europe. Our second collection on the Mindful Hand, also shifts common ground by querying and modifying common views of the links between knowledge and technique in early-modern European development. Scientific or related knowledge was not brought to technique as a socio-cultural gift from an educated elite to the working man. Rather, educated gents, practitioners, instrument makers, craftsfolk and technicians of all kinds intermingled both socially and in terms of the recognition of technical problems as well as in the assemblage of the mental, commercial and cognitive resources required to pursue innovative production projects.

The Routledge International Handbook of Learning with Technology in Early Childhood Natalia Kucirkova,Jennifer Rowsell,Garry Falloon,2019-03-04 The Routledge International Handbook of Learning with Technology in Early Childhood focuses specifically on the most cutting-edge, innovative and international approaches in the study of children's use of and learning with digital technologies. This edited volume is a comprehensive survey of methods in children's technologies and contains a rich repertoire of studies from diverse fields and research, including both educational and developmental psychology, post-humanist literacy, applied linguistics, language and phenomenology and narrative approaches. For ease of reference, the Handbook's 28 chapters are divided into four thematic sections: introduction and opening reflections; studies answering ontological questions, which theorize how children take on original identities in becoming literate with technologies; studies answering epistemological questions, which focus on how children's knowledge and learning are (co)constructed with a diverse range of technologies; studies answering practice-related questions, which explore the resources and conditions that create the most powerful learning opportunities for children. Expertly edited, this interdisciplinary and international compendium is an ideal introduction to such a diverse, multi-faceted field.

Elena Rodriguez,2003-06-29 These post-proceedings contain the revised versions of the papers presented at the \Symposium on Objects and Databases which was held in Sophia-Antipolis, France, June 13, 2000, in conjunction with the Fourteenth European Conference on Object-Oriented Programming, ECOOP 2000. This event continued the t- dition established the year before in Lisbon (Portugal) with the First Workshop on Object-Oriented Databases. The goal of the symposium was to bring together researchers working in various corners of the eld of objects and databases, to discuss the current state of research in the eld and to critically evaluate existing solutions in terms of their current usage, their successes and limitations, and their potential for new applications. The organizing committee received 21 papers which were reviewed by a p-gram committee of people active in the eld of objects and databases. There were 3 reviews for each paper, and nally the organizing committee selected 9 long papers, 2 short papers, and a demonstration to be presented and discussed at the symposium. The selected papers cover a wide spectrum of topics, including data modeling concepts, persistent object languages, consistency and integrity of persistent data, storage structures, class versioning and schema evolution, query languages, and temporal object-oriented databases. The Philosophy of Law Meets the Philosophy of Technology Mireille Hildebrandt,Antoinette Rouvroy,2011-08-26 Law, Human Agency and Autonomic Computing interrogates the legal implications of the notion and experience of human agency implied by the emerging paradigm of autonomic computing, and the socio-technical infrastructures it supports. The development of autonomic computing and ambient intelligence – self-governing systems – challenge traditional philosophical conceptions of human self-constitution and agency, with significant consequences for the theory and practice of constitutional self-government. Ideas of identity, subjectivity, agency, personhood, intentionality, and embodiment are all central to the functioning of modern legal systems. But once artificial entities become more autonomic, and less dependent on deliberate human intervention, criteria like agency, intentionality and self-determination, become too fragile to serve as defining criteria for human subjectivity, personality or identity, and for characterizing the processes through which individual citizens become moral and legal subjects. Are autonomic – yet artificial – systems shrinking the distance between (acting) subjects and (acted upon) objects? How 'distinctively human' will agency be in a world of autonomic computing? Or, alternatively, does autonomic computing merely disclose that we were never, in this sense, 'human' anyway? A dialogue between philosophers of technology and philosophers of law, this book addresses these questions, as it takes up the unprecedented opportunity that autonomic computing and ambient intelligence offer for a reassessment of the most basic concepts of law.

Patriots and Profiteers R.T. Naylor,2008-10-16 Almost everyone assumes that by enforcing trade sanctions and arms embargoes, modern democracies make tin-pot dictators and rogue states mend their ways - that the application of economic pressure is easily the most effective way to curb aggression and encourage respect for human rights. R.T. Naylor demonstrates that economic warfare fails almost everywhere it is attempted, and that even when it succeeds, it has consequences that are not only unintended, but also frequently the precise opposite of their advertised result. For instance, embargoes drove Cuba into the awkward embrace of the Soviet Union. Everywhere that economic pressures have been used to either replace or augment military actions, the result has been confusion leading to criminality. From east to west, from before WWI to the recent confrontations with Pakistan, Bosnia, and Iraq, the legacy of economic warfare has been money laundering, gun-running, drug smuggling, and evasion of the rule of law. Naylor's approach is at once epic and anecdotal. His survey is populated by a bizarre underworld of warriors and smugglers, gangsters and spies, whose singular careers would be comic if they weren't absolutely real.

TRIPS Agreement of the WTO Mohammad Towhidul Islam,2014-07-24 This book examines the application of the World Trade Organization's (WTO) Agreement on Trade-Related Aspects of Intellectual Property Rights (TRIPS) in the fields of agriculture, public health and economic development in a Least Developed Country (LDC) such as Bangladesh. In particular, it evaluates the question whether the TRIPS' one-size-fits-all approach compulsorily applicable for all countries, irrespective of their development standing, fulfils the developmental needs of Bangladesh and other such LDCs in the fields of agriculture, public health and economic development. The book shows that the TRIPS' introduction of IPRs in the name of Plant Varieties Protection (PVP) and patents not only secures private sector investment in agriculture but also brings traditional agricultural practices within the spectrum of private monopoly, increases the price of agricultural products and forces people into dependency on engineered seeds and other agricultural inputs. To guard against such trade rules, this book recommends that Bangladesh should incorporate the TRIPS flexibilities in the form of redefining patentable invention, choosing between patents and PVP and providing for compulsory licensing. This book also reveals that the TRIPS patenting in pharmaceuticals encourages innovations by ensuring royalty collections and protects public health by raising standards of living. However, patenting offers exclusivity to pharmaceutical companies, extending the duration of the patent term and establishing their control over production, supply and distribution. Such control results in exclusivity over drug pricing. The flexibilities of the compliance deadline, compulsory licensing, and parallel importation built into the TRIPS are set to tackle untenable situations arising from patenting exclusivity. However, patent laws in most LDCs are out-dated in terms of dealing with such flexibilities. Given this, the research recommends that Bangladesh should invoke the TRIPS flexibilities. The author of this book further establishes that the TRIPS' standard-setting in agriculture and pharmaceuticals does not help the country to fulfil subsistence needs or promote economic development through innovation. However, the appropriation of agricultural and pharmaceutical goods during the use of the TRIPS flexibilities has the potential to feed the people, protect public health interests and increase economic development with the supply of food and drugs at home and abroad. To this end, the research asks Bangladesh to reform its existing IPRs provisions by redefining patentable inventions and simplifying compulsory licensing and other differential treatments to appropriate foreign technologies.
