Tucana Dwarf and Humanity Mizco LLC,2012-02 Jules Verne said, Science, my lad, is made up of mistakes, but they are mistakes which it is useful to make, because they lead little by little to the truth. He took the perceived truths of his century and extrapolated them into stories that mimic the realities of today. This novel takes today's accepted science and offers the reader a journey into man's humanity reaching back in time through generations and suggests the possibilities the future may hold when we fill the questions that remain unanswered by our brightest minds. Science and Religion are often at odds and this author does not attempt to hide it. But both are needed to foresee our future which, if our history is any guide, will be rich, exciting, and surprising. Both will change with time and our humanity will find the truth. This book offers just such a scenario to the truth, pushing the limits of our mind and technology in a manner that seems plausible. Such is the style of Jules Verne who also said, Whatever one man is capable of conceiving, other men will be able to achieve.

Turn Left at Orion Guy Consolmagno,Dan M. Davis,2018-11-30 With over 150,000 copies sold since its first publication, this is one of the most popular astronomy books of all time. This unique guidebook to the night sky shows you how to observe a host of celestial wonders. Its distinct format of object-by-object spreads illustrates how deep-sky objects and planets actually look through a small telescope, while its large pages and spiral binding allow for use outside. Along with updated star names and astronomical information, this new edition provides links to a dedicated webpage with up-to-date tables and images, and an improved planets chapter. The many Dobsonian-friendly images and small telescope views have been revised to account for changes in modern telescope technology, such as larger field of view eyepieces. With dedicated chapters on Northern and Southern Hemisphere objects, it's never been easier to explore the night sky, wherever you are. Additional resources are available on the accompanying website: www.cambridge.org/turnleft.

Constellations Chris Sasaki,2003 It's not always easy to find the 88 constellations, but this illustrated guidebook will lead you through the stars and make gazing at them a more meaningful experience. Two larger maps portray the entire northern and southern sky, and all the constellations in it. Because the stars put on different seasonal shows, another set charts the changes that take place in the heavens during the year. Still more pictures present a close-up view of every single constellation, filled with detail. (You'll see an image of the real or imaginary creature it's named after, too.) And, there's so much great information accompanying the super visuals: facts on how far away the stars really are, other interstellar phenomena, the history of every constellation and how they got their names, and the best way to do your star searching.
