Towards Extensible and Adaptable Methods in Computing Shampa Chakraverty,Anil Goel,Sanjay Misra,2018-11-04 This book addresses extensible and adaptable computing, a broad range of methods and techniques used to systematically tackle the future growth of systems and respond proactively and seamlessly to change. The book is divided into five main sections: Agile Software Development, Data Management, Web Intelligence, Machine Learning and Computing in Education. These sub-domains of computing work together in mutually complementary ways to build systems and applications that scale well, and which can successfully meet the demands of changing times and contexts. The topics under each track have been carefully selected to highlight certain qualitative aspects of applications and systems, such as scalability, flexibility, integration, efficiency and context awareness. The first section (Agile Software Development) includes six contributions that address related issues, including risk management, test case prioritization and tools, open source software reliability and predicting the change proneness of software. The second section (Data Management) includes discussions on myriad issues, such as extending database caches using solid-state devices, efficient data transmission, healthcare applications and data security. In turn, the third section (Machine Learning) gathers papers that investigate ML algorithms and present their specific applications such as portfolio optimization, disruption classification and outlier detection. The fourth section (Web Intelligence) covers emerging applications such as metaphor detection, language identification and sentiment analysis, and brings to the fore web security issues such as fraud detection and trust/reputation systems. In closing, the fifth section (Computing in Education) focuses on various aspects of computer-aided pedagogical methods.

Sonic Writing Thor Magnusson,2019-02-21 Sonic Writing explores how contemporary music technologies trace their ancestry to previous forms of instruments and media. Studying the domains of instrument design, musical notation, and sound recording under the rubrics of material, symbolic, and signal inscriptions of sound, the book describes how these historical techniques of sonic writing are implemented in new digital music technologies. With a scope ranging from ancient Greek music theory, medieval notation, early modern scientific instrumentation to contemporary multimedia and artificial intelligence, it provides a theoretical grounding for further study and development of technologies of musical expression. The book draws a bespoke affinity and similarity between current musical practices and those from before the advent of notation and recording, stressing the importance of instrument design in the study of new music and projecting how new computational technologies, including machine learning, will transform our musical practices. Sonic Writing offers a richly illustrated study of contemporary musical media, where interactivity, artificial intelligence, and networked devices disclose new possibilities for musical expression. Thor Magnusson provides a conceptual framework for the creation and analysis of this new musical work, arguing that contemporary sonic writing becomes a new form of material and symbolic design--one that is bound to be ephemeral, a system of fluid objects where technologies are continually redesigned in a fast cycle of innovation.

High Noon Karen Southwick,1999-08-27 In 1982, a little upstart named Sun was making waves in the high-tech industry with its groundbreaking workstation technology, even as early competitors dismissed the company as not worth losing sleep over. Since then, Sun Microsystems has become a formidable presence in the industry, making its own rules and taking no prisoners, and is currently poised to reach the highest point of its ascendancy--the challenge of Microsoft's dominance over the future of computing. The driving force behind this once fledgling company is a man who has been described as brash, unconventional, ambitious, forward-looking, and sometimes even his own worst enemy. Scott McNealy turned Sun into the multibillion-dollar success it is today--a developer of innovative software like Java that is revolutionizing the computing landscape. High Noon is the inside story of Sun's rise to power, from its shaky start in Silicon Valley through its transformation under the aggressive and inspirational leadership of McNealy. Karen Southwick reveals the behind-the-scenes maneuverings of McNealy and Sun, with candid interviews from the key players and insights into the inner workings of the high-tech industry. This book examines how scrappy underdog Sun overcame its larger and supposedly tougher competitors, combining hard work, tenacity, and talented people to build a more innovative and flexible company. You'll learn how McNealy moved Sun up the industry food chain, challenging more established companies like Hewlett-Packard and Digital Equipment by expanding Sun's product line and refocusing the business. High Noon expertly chronicles McNealy's triumphant history with Sun, from his early days as vice president of manufacturing to a CEO known for shooting straight from the hip without regard for the consequences. You'll discover how Javaman--as Fortune magazine dubbed McNealy--prompted Sun to take risks that ultimately allowed it to survive, thrive, and dominate--making Microsoft stand up and take notice. And you'll see how Sun's looming showdown with this industry giant promises wide-reaching implications for businesses and consumers alike. Among High Noon's revelations: * A new perspective on how the complex, contradictory McNealy shaped his company and fashioned its strategy * Insight into central issues facing the high-tech industry, such as network computers and the future of the Internet * An insider view of the maneuverings of industry powerhouses, including Microsoft, Oracle, Netscape, IBM, and Intel * Both entertaining and instructive, High Noon offers valuable lessons for taking charge of your destiny and succeeding in a fast-paced, unpredictable, and even hostile environment. Advance Praise for Karen
