Lego Software Power Tools With LDraw MLCad and LPub Kevin Clague, Syngress, Miguel Agullo, 2003-02-08 Create Virtual 3D LEGO Models Using LEGO Software Power Tools LEGO Master Builders have created a powerful set of tools that are distributed as freeware to the LEGO community to assist LEGO fans in their building adventures. Until now, these tools have been difficult to find, and even more difficult to configure to work with one another. Here, in one book, readers will find steps for installing and using all of the most popular LEGO freeware applications. Also, all of the applications are consolidated into one simple-to-install program that allows readers to be up and running in minutes Ø Wide market appeal. This book will appeal to the huge established consumer base of the LEGO community, as well as to children, parents, and teachers who may have been intimidated by the difficulties of bringing all of these applications under one roof. Ø The only book of its kind to cover

the wide variety of applications available. Some books in the past have touched on one or two of these LEGO applications, but none has covered them all in such detail. Ø CD provides all of these freeware applications in one easy to install program. Included CD packs more than 8 applications into one easy-to-use format, making it easy for readers to have access to all of these applications in minutes and avoid the headaches of trying to download, install, configure, set up folder structures, and troubleshoot such a wide variety of loosely related freeware applications. Ø Will coincide with the release of Lpub. This will be the first in-depth look at LPub, the new creation of Kevin Clague, which ties LDraw, MLCad, L3P, and POV-Ray together to allow users to easily create professional quality LEGO instructions for both the printed page and the web.

**System Level Design with .Net Technology** El Mostapha Aboulhamid, Frederic Rousseau, 2018-10-03 The first book to harness the power of .NET for system design, System Level Design with .NET Technology constitutes a software-based approach to design modeling verification and simulation. World class developers, who have been at the forefront of system design for decades, explain how to tap into the power of this dynamic programming environment for more effective and efficient management of metadata—and introspection and interoperability between tools. Using readily available technology, the text details how to capture constraints and requirements at high levels and describes how to percolate them during the refinement process. Departing from proprietary environments built around System Verilog and VHDL, this cutting-edge reference includes an open source environment (ESys.NET) that readers can use to experiment with new ideas, algorithms, and design methods; and to expand the capabilities of their current tools. It also covers: Modeling and simulation—including requirements specification, IP reuse, and applications of design patterns to hardware/software systems Simulation and validation—including transaction-based models, accurate simulation at cycle and transaction levels, cosimulation and acceleration technique, as well as timing specification and validation Practical use of the ESys.NET environment Worked examples, end of chapter references, and the ESys.NET implementation test bed make this the ideal resource for system engineers and students looking to maximize their embedded system designs.

**Artificial Intelligence in Education** V. Dimitrova, R. Mizoguchi, B. du Boulay, 2009-06-25 This publication covers papers presented at AIED2009, part of an ongoing series of biennial international conferences for top quality research in intelligent systems and cognitive science for educational computing applications. The conference provides opportunities for the cross-fertilization of techniques from many fields that make up this interdisciplinary research area, including: artificial intelligence, computer science, cognitive and learning sciences, education, educational technology, psychology, philosophy, sociology, anthropology, linguistics, and the many domain-specific areas for which AIED systems have been designed and evaluated. AIED2009 focuses on the theme Building learning systems that care: from knowledge representation to affective modelling. The key research question is how to tackle the complex issues related to building learning systems that care, ranging from representing knowledge and context to modelling social, cognitive, metacognitive, and affective dimensions. This requires multidisciplinary research that links theory and technology from artificial intelligence, cognitive science, and computer science with theory and practice from education and the social sciences.
