**Richard Boulanger, Victor Lazzarini**

**1937** Vadim Zakharovich Rogovin,1998 The first major study by a Russian Marxist Historian of the Stalinist purges which are often collectively referred to by the year they reached their greatest intensity: 1937. Rogovin shows that the purges were aimed at the physical annihilation of the growing socialist opposition to Stalin's bureaucratic regime. Focused on Leon Trotsky and his thousands of supporters, the purges were a blow against the October Revolution, its leaders and its heritage.

**Was There an Alternative? Trotskyism: a Look Back Through the Years** Vadim Zakharovich Rogovin,2021 This book was published by Vadim Rogovin in Moscow in the fall of 1992, slightly less than one year after the Soviet Union had been dissolved. It is the first volume of what would become a seven-volume study of the struggle of the Left Opposition, both inside the Soviet Union and abroad, as it fought the Stalinist degeneration of the workers' state established after the October Revolution in 1917. This first volume raises the question: Was There an Alternative to Stalinism? It studies the rise of the Left Opposition led by Leon Trotsky in 1923, and ends with the expulsion of Trotsky and his supporters at the Fifteenth Party Congress in 1927. The succeeding volumes examine the history of the resistance to Stalinism up through Trotsky's assassination in August 1940 and the outbreak of World War II--

*Stalin's Terror of 1937-1938* Vadim Zakharovich Rogovin, 2009  
This volume examines the bloodiest period of the Stalinist repression of political opposition in the Soviet Union, debunking the myth that the Great Purges were merely the product of Stalin's paranoia and had no overriding political logic. Through a meticulous examination of original sources, including archival documents only made available for research in the 1990s, Professor Vadim Rogovin argues that the ferocity of the mass repression was directly proportional to the intensity of resistance to Stalin within the Communist Party of the Soviet Union (CPSU), particularly the opposition inspired by and associated with the exiled Bolshevik leader Leon Trotsky. Far from Trotsky being a politically isolated figure, as both Stalinist and anti-communist historians have claimed, there was substantial sympathy for his criticism of the Stalin regime in the ranks and even in the leadership of the CPSU, and support for his demands for inner-party democracy, greater social equality and an international orientation to the Bolshevik goal of world revolution. It was this political fact, as Rogovin demonstrates, that accounts for the purge reaching so deeply into the party apparatus, the military, the Komsomol youth movement, and the broader layers of the population. Rogovin bases his analysis on scrupulous research, quoting from newly translated or unpublished documents, including memoirs, meeting minutes, newspaper articles and trial transcripts. He documents the reaction of different social layers to the purges, including workers, peasants, non-party intellectuals

and the CPSU rank-and-file. This book includes rarely published photographs of the prison camps, documenting the lives of those labeled by Stalin; enemies of the people. Chronologically, this volume takes up where its predecessor, 1937: Stalin's Year of Terror , left off, with the June 1937 plenum of the Central Committee that followed the purging of the Soviet military command and the execution of Marshal Tukhachevsky and other leading generals. It analyzes such critical events as the Bukharin-Rykov trial, last of the infamous show trials; the massacre of Trotskyists in the Vorkuta slave-labor camp; and the assassination by Stalinist agents of Leon Sedov, Trotsky's son, and other oppositionists outside the Soviet Union. It concludes with an examination of how the purges transformed the CPSU and Soviet society as a whole.

**Bolsheviks Against Stalinism (1928/1933): Was there an alternative to Stalinism?** Vadim Zakharovich Rogovin, 2019 This book was published by Vadim Rogovin in Moscow in the fall of 1993, slightly less than two years after the Soviet Union had been dissolved. It is the second volume of what would become a seven-volume study of the struggle of the Left Opposition led by Leon Trotsky, both inside the Soviet Union and abroad, as it fought the Stalinist degeneration of the workers' state established after the October Revolution in 1917. The first volume raises the question: Was There an Alternative to Stalinism? It studies the rise of the Left Opposition led by Leon Trotsky in 1923, and ends with the expulsion of Trotsky and his supporters at the Fifteenth Party Congress in 1927. The succeeding volumes examine the history of the resistance to Stalinism up through Trotsky's assassination in August 1940 and the outbreak of World War II. The period under consideration in this book was a time when new oppositions composed of former Bukharinists and Stalinists arrived at Trotskyist ideas. This process concluded in 1932 with an attempt to unite the old and new oppositional groups inside the party. This book attempts to trace the history of the inner-party struggles of

1928-1933, comparing the following fundamental types of sources: official party documents (decisions of congresses and plenums of the Central Committee, the speeches of Stalin and his accomplices, Stalinist propaganda); memoirs of the participants in political life of those years; Soviet archival material that exposes important aspects of historical events hidden from contemporaries; and oppositional documents, a large portion of which are unknown to the Soviet reader.--

**Biochemistry of Diabetes and Atherosclerosis** James S.C. Gilchrist,Paramjit Tappia,Thomas Netticadan,2012-12-06 Diabetes is an autoimmune, inflammatory disease affecting many different organ systems and exhibiting both primary and secondary defects. Because diabetes affects a wide range of cellular systems, a multidisciplinary effort has been mounted over the past several decades using a wide range of investigative techniques and methodologies in order to identify molecular mechanisms responsible for cellular dysfunction. Because primary defects at various levels of sub-cellular signaling, intracellular calcium handling, protein expression and energy regulation are often a primary consequence of diabetes. This volume is a compilation of new multidisciplinary research that will broaden our current understanding of diabetes and cardiovascular disease as well as provide the basis for the development of novel therapeutic interventions.

*Low Carbon Energy Technologies in Sustainable Energy Systems* Grigorios L. Kyriakopoulos,2021-01-08 Low Carbon Energy Technologies for Sustainable Energy Systems examines, investigates, and integrates current research aimed at operationalizing low carbon technologies within complex transitioning energy economies. Scholarly research has traditionally focused on the technical aspects of exploitation, R&D, operation, infrastructure, and decommissioning, while approaches which can realistically inform their reception and scale-up across real societies and real markets are piecemeal and isolated in

separate literatures. Addressing both the technical foundations of each technology together with the sociotechnical ways in which they are spread in markets and societies, this work integrates the technoeconomic assessment of low carbon technologies with direct discussion on legislative and regulatory policies in energy markets. Chapters address issues, such as social acceptance, consumer awareness, environmental valuation systems, and the circular economy, as low carbon technologies expand into energy systems sustainability, sensitivity, and stability. This collective research work is relevant to both researchers and practitioners working in sustainable energy systems. The combination of these features makes it a timely book that is useful and attractive to university students, researchers, academia, and public or private energy policy makers. Combines socio-cultural perspectives, environmental sustainability, and economic feasibility in the analysis of low carbon energy technologies Assesses regulatory governance impacting the environmental protection and the social cohesion of environmentally-directed energy markets Reviews the carbon trade exchange, attributing economic value to carbon and enabling its trading perspectives by people, companies or countries invested in low carbon technologies

This book provides both a rigorous view and a more practical, understandable view of chemical compounds and

biochemical engineering and their applications. Every section of the book has been expanded where relevant to take account of significant new discoveries and realizations of the importance of key concepts. Furthermore, emphases are placed on the underlying fundamentals and on acquisition of a broad and comprehensive grasp of the field as a whole.

Reality Transurfing Vadim Zeland, 2011 Transurfing Reality was one of the top non-fiction bestsellers in the world in 2005 and 2006. Unknown till now in the West, the series has sold over 1,300,000 copies in Russia in three years. This translation (by Natasha Micharina) describes a new way of looking at reality, indeed of creating it. It provides a scientific explanation of the laws that help you do this, building up a scientific model, speaking in detail about particular rules to follow and giving important how-to tips, illustrated with examples. The author introduces a system of specific terms, notions, and metaphors, which together make a truly convincing, thought-provoking theory of creating your own life. "You are ruled by circumstances and it will always be like that until you learn how to manage your reality," says the author. Bringing together the cutting edge of modern science and philosophical teaching, the book's style is popular-scientific, metaphorical and conversational. Books in the series: Reality Transurfing 1: The Space of Variations; Reality Transurfing 2: A Rustle of Morning Stars; Reality Transurfing 3: Forward to the Past; Reality Transurfing 4: Ruling Reality; Reality Transurfing 5: Apples Fall to the Sky

Esfir Shub Ilana Shub Sharp, 2021-12-30 Esfir Shub was the only prominent female director of nonfiction film present at the dawning of the Soviet film industry. She was, in fact, the first woman both to write critical texts on cinema and then practically apply these theorisations in her own films. As such, her syncretism of cinema theory and praxis inspired her to ask questions regarding both the nature of nonfiction film, such as the problem of authenticity and reality, and the function of the artist in society;

issues which are still relevant in contemporary discussions about the documentary. Accordingly, this book demonstrates Shub's position not only as a significant filmmaker and recognised member of the early Soviet avant-garde but also as a key figure in global cinema history. Shub deserves recognition both as the founder and ardent promoter of the compilation film genre and as a pioneer of the theory and practice of documentary filmmaking.

**Tufti the Priestess. Live Stroll Through a Movie** Vadim

Zeland,2018-11-12 Meet the new world sensation. It's Tufti.Why is it that nothing seems to work out the way you want it to, despite the fact that you act according to your own free will? You might think that the reason why nothing is working out the way you want, is because that's just how life is. But the real reason things don't work out the way you want them to, is because you aren't acting according to your own free will -you are being directed by a script. Another reason things don't work out the way people want them to, is because they don't know how to take the right action to shape events the way they want. Rather than composing the reality of the upcoming film roll, they tend to battle with the reality they face in the current frame. Reality exists only in the here and now, and what is real is real only to the extent that it has taken place in the material world.You cannot change what has already happened. Yet when you fight with your current reality, that is exactly what you are doing, because everything that surrounds you consists of something that has already happened. If you want to change the script, you have to wake up and come alive inside the movie.Translation from the Russian language by Joanna Dobson

Antioxidants in Therapy and Preventive Medicine Ingrid Emerit, Lester Packer, Christian Auclair, 2012-12-06 Twenty years ago, the enzyme superoxide dismutase which uses the superoxide radical anion as its specific substrate was reported. With this discovery was born a new scientific field, in which oxygen, necessary for aerobic life on this planet, had to be considered also in terms of its toxicity and stresses. This stimulated the search for knowledge of active oxygen species in biology and medicine. Superoxide and other reactive oxygen species are now implicated in many disease processes. Major advances have been achieved during these past years with respect to free radical generation and mechanisms of free radical action in causing tissue injury. In parallel, the possibility of influencing free radical related disease processes by antioxidant treatment was studied in various in vitro and in vivo systems. This was the unique theme of a conference organized in Paris by the Society for Free Radical Research (December 9-10, 1988) which brought together experts from basic sciences and clinicians in order to evaluate the current status of antioxidant therapy. The conference emphasized fundamental processes in antioxidant action. Among the major topics were superoxide dismutase (SOD) and low molecular weight substances with such activity, called SOD mimics. Other antioxidant enzymes were also considered. Antioxidant vitamins, in particular vitamins E and C, other naturally occurring antioxidants and various synthetic antioxidants were included in the presentations as there is now a rapidly developing series of compounds with potentially interesting clinical applications.
