Dynamics of Rods Valery A. Svetlitsky,2005-10-06 This is the first and only monograph on this subject, and provides a systematic presentation of theoretical fundamentals of the mechanics of rods as well as numerical methods used for practical purposes. Includes problems and solutions for self-study.

Statics of Rods V.A. Svetlitsky,2012-12-06 The volume is devoted to mechanics of rods, which is a branch of mechanics of deformable bodies. The main goal of the book is to present systematically theoretical fundamentals of mechanics of rods as well as numerical methods used for practical purposes. The monograph is concerned with the most general statements of the problems in mechanics of rods. Various types of external loads that a rod may be subject to are discussed. Advanced technique that includes vector is used in the derivation of linear analysis, linear algebra, and distributions and nonlinear equilibrium equations. The use of this technique helps us to make transformations and rearrangement of equations more transparent and compact. Theoretical basics of rods interacting with external and internal flows of fluid and the derivation of the formulas for the hydrodynamic and aerodynamic forces are presented. The book consists of six chapters and appendices and may be conventionally divided into two parts. That is, Chapters 1 to 3 contain, in the main, theoretical material, whereas Chapters 4 to 6 illustrate the application of the theoretical results to problems of practical interest. Problems for self-study are found in Chapters 1, 3, 4, and 5. The solutions to most of the problems are given in Appendix B. The monograph is addressed to scientists, institutional and industrial researchers, lecturers, and graduate students.

Crude Domination Andrea Behrends,Stephen Reyna,Günther Schlee,2011-10-30 Crude Domination is an innovative and important book about a critical topic – oil. While there have been numerous works about petroleum from 'experience-far' perspectives, there have been relatively few that have turned the 'experience-near' ethnographic gaze of anthropology on the topic. Crude Domination does just this among more peoples and more places than any other volume. Its chapters investigate nuances of culture, politics and economics in Africa, Latin America, and Eurasia as they pertain to petroleum. They wrestle with the key questions vexing scholars and practitioners alike: problems of the economic blight of the resource curse, underdevelopment, democracy, violence and war. Additionally they address topics that may initially appear insignificant – such as child witches and lionmen, fighting for oil when there is no oil, reindeer nomadism, community TV – but which turn out on closer scrutiny to be vital for explaining conflict and transformation in petro-states. Based upon these rich, new worlds of information, the text formulates a novel, domination approach to the social analysis of oil.

Heat-Mass Transfer and Geodynamics of the Lithosphere Valentina Svalova,2021-04-09 This volume is devoted to investigation of all aspects of heat-mass transfer processes at different scales and from various origins, as well as the formation and evolution of geological structures. These phenomena are linked to geophysical properties of rocks, geothermal resources, geothermics, fluid dynamics, stress-state of the lithosphere, deep geodynamics, plate tectonics, and seismicity, among others. The book consists of two main parts. The first concerns heat-mass transfer associated with natural and technogenic processes in the upper lithosphere. The second deals with geodynamics and seismicity. The collection of over 25 chapters from leading investigators in Russia is thus an important contribution to research on the lithosphere in connection with formation and evolution of geological structures; heat and mass transfer processes in the lithosphere and their connection with deep Earth geodynamics. Collects a range of research methodologies including application of modelling, seismic tomography, geological field works, geological-geophysical methods, and in situ measurements through instrumentation; Explains how a wide range of geological and geophysical phenomena arising in the Earth's lithosphere can be investigated under the umbrella of a common approach to heat-mass transfer processes; Includes the latest research by more than 60 leading scientists from Russia.

Decoding Serial Killer's Name in Cryptogram Puzzles Amrahs Hseham,2024-01-28 Completing a puzzle, even the simplest of puzzles, sets a single goal to be achieved. This process involves problem-solving, reasoning skills, and developing solutions that one can later transfer into their personal life. Puzzles are a fun way for one to develop and refine one's fine motor skills. When engaged in playing with puzzles, one is required to pick up, pinch, and grasp pieces and move them around, manipulating them into slots, sorting them, and fitting them into the correct places. The accomplishment of achieving a goal brings so much satisfaction to a player. Overcoming the challenges involved in solving a puzzle gives you a sense of achievement and pride. It provides a boost to your confidence and self-esteem as it prepares you for other challenges in future life.

Advances in Artificial Intelligence for Renewable Energy Systems and Energy Autonomy Mukhdeep Singh Manshahia,Valeriy Kharchenko,Gerhard-Wilhelm Weber,Pandian Vasant,2023-06-14 This book provides readers with emerging research that explores the theoretical and practical aspects of implementing new and innovative artificial intelligence (AI) techniques for renewable energy systems. The contributions offer broad coverage on economic and promotion policies of renewable energy and energy-efficiency technologies, the emerging fields of neuro-computational models and simulations under uncertainty (such as fuzzy-based computational models and fuzzy trace theory), evolutionary computation, metaheuristics, machine learning applications, advanced optimization, and stochastic models. This book is a pivotal reference for IT specialists, industry professionals, managers, executives, researchers, scientists, and engineers seeking current research in emerging perspectives in artificial intelligence, renewable energy systems, and energy autonomy.

China's Energy Security and Relations With Petrostates Anna Kuteleva,2021-07-26 This book examines the development of bilateral energy relations between China and the two oil-rich countries, Kazakhstan and Russia. Challenging conventional assumptions about energy politics and China's global quest for oil, this book examines the interplay of politics and sociocultural contexts. It shows how energy resources become ideas and how these ideas are mobilized in the realm of international relations. China's relations with Kazakhstan and Russia are simultaneously enabled and constrained by the discursive politics of oil. It is argued that to build collaborative and constructive energy relations with China, its partners in Kazakhstan, Russia, and elsewhere must consider not only the material realities of China's energy industry and the institutional settings of China's energy policy but also the multiple symbolic meanings that energy resources and, particularly, oil acquire in China. China's Energy Security and Relations with Petrostates offers a nuanced understanding of China's bilateral energy relations with Kazakhstan and Russia, raising essential questions about the social logic of international energy politics. It will appeal to students and scholars of international relations, energy security, Chinese and post-Soviet studies, along with researchers working in the fields of energy policy and environmental sustainability.

Innovations and Technologies in Construction Sergey Vasil'yevich Klyuev,Valeriy Stanislavovich Lesovik,Nikolay Ivanovich Vatin,2020-07-30 This book gathers the latest advances, innovations, and applications

in the field of building design and construction, as presented by researchers and engineers at the International Conference BUILDINTECH BIT 2020, Innovations and Technologies in Construction, held in Belgorod, Russia, on October 8-9, 2020. It covers highly diverse topics, including building materials, industrial and civil construction, structural mechanics and theory of structures, computational methods and IT in construction, organization and technologies of construction production. The contributions, which were selected by means of a rigorous international peer-review process, highlight numerous exciting ideas that will spur novel research directions and foster multidisciplinary collaborations.

Soviet Air Force Fighter Colours 1941-1945 Erik Pilawskii,2003 This book represents probably the most detailed study published in the English language of the camouflage and markings of the fighter aircraft of the Soviet Air Force during World War II. Erik Pilawskii is a scholar of the Soviet Air Force in World War II and has undertaken several years of research to produce this ground-breaking book. With information drawn from previously inaccessible Soviet archives, the author first presents a detailed analysis of the developments, trends, patterns and irregularities of the color systems seen on Russian fighters and offers a fascinating insight into the workings of the Soviet manufacturing system responsible for this task. He then brings readers a technical study of each of the main fighter aircraft and variants, and each description is followed by coverage of camouflage and markings, factory-applied, field variations and seasonal. The text is supported by hundreds of rare and previously unpublished photographs and more than 40 commissioned full color artworks. Furthermore, hundreds of color illustrations portray the immense variety of patterns related to this fascinating subject. This book will be a must-have for all students of Soviet air power and Russian aircraft modelers.
