Cyber Security Auditing, Assurance, and Awareness Through CSAM and CATRAM Sabillon, Regner,2020-08-07 With the continued progression of technologies such as mobile computing and the internet of things (IoT), cybersecurity has swiftly risen to a prominent field of global interest. This has led to cyberattacks and cybercrime becoming much more sophisticated to a point where cybersecurity can no longer be the exclusive responsibility of an organization's information technology (IT) unit. Cyber warfare is becoming a national issue and causing various governments to reevaluate the current defense strategies they have in place. *Cyber Security Auditing, Assurance, and Awareness Through CSAM and CATRAM* provides emerging research exploring the practical aspects of reassessing current cybersecurity measures within organizations and international governments and improving upon them using audit and awareness training models, specifically the Cybersecurity Audit Model (CSAM) and the Cybersecurity Awareness Training Model (CATRAM). The book presents multi-case studies on the development and validation of these models and frameworks and analyzes their implementation and ability to sustain and audit national cybersecurity strategies. Featuring coverage on a broad range of topics such as forensic analysis, digital evidence, and incident management, this book is ideally designed for researchers, developers, policymakers, government officials, strategists, security professionals, educators, security analysts, auditors, and students seeking current research on developing training models within cybersecurity management and awareness.

Routledge Handbook of New Media in Asia Larissa Hjorth,Olivia Khoo,2015-11-06 While a decade ago much of the discussion of new media in Asia was couched in Occidental notions of Asia as a default setting for technology in the future, today we are seeing a much more complex picture of contesting new media practices and production. As new media becomes increasingly an everyday reality for young and old across Asia through smartphones and associated devices, boundaries between art, new media, and the everyday are transformed. This Handbook addresses the historical, social, cultural, political, philosophical, artistic and economic dimensions of the region's new media. Through an interdisciplinary revision of both new media and Asia the contributors provide new insights into the complex and contesting terrains of both notions. The Routledge Handbook of New Media in Asia will be the definitive publication for readers interested in comprehending all the various aspects of new media in Asia. It provides an authoritative, up-to-date, intellectually broad, conceptually cutting-edge guide to the important aspects of new media in the region – as the first point of consultation for researchers, advanced level undergraduate and postgraduate students in fields of new media and Asian studies.

Role of Information Technology in Flood Disaster Management in Kerala: a Brief Overview Prem Jose Vazhacharickal, Anakha Raju, Geethu Thomas, Flooding may occur as an overflow of water from water bodies, such as a river, lake, or ocean, in which the water overtops or breaks levees, resulting in some of that water escaping its usual boundaries. Kerala state covers an area of 38,863 km² with a population density of 859 per km² spread across 14 districts. Beginning on 15 August 2018, severe floods affected the south Indian state of Kerala, due to unusually high rainfall during the monsoon season. It was the worst flooding in Kerala in nearly a century. Kerala received heavy monsoon rainfall, which was about 256% more than the usual rain fall in Kerala, on the mid-evening of August 8, resulting in dams filling to capacity; in the first 24 hours of rainfall the state received 310 mm (12 in) of rain. With the use of sophisticated technologies, it has been easier to manage disasters both natural and man-made. The main objectives of the proposed research work is identify the various aspects of IT which were used efficiently for the flood disaster management during August 2018 in Kerala State. A QuickBird image taken during August 2018 with 0.6 m resolution was downloaded from Google Earth (Google Inc., Mountain View, CA, USA) and landuse maps (Landsat L7 ETM+, USGS) were used to track the flooded area in Kerala State. For the baseline survey, semi-structured questionnaires were prepared covering demographic, socio-economic and characteristics of households, as well as aspects of flood damage to house, property and agricultural production. Information Technology is widely used to save the lives of thousands of flood affected people in the Kerala state during the heavy floods in August 2018. These technologies could be further explored for more efficient flood coordination and disaster management in future.

Media Convergence and Deconvergence Sergio Sparviero, Corinna Peil, Gabriele Balbi, 2017-10-20 This edited volume explores different meanings of media convergence and deconvergence, and reconsiders them in critical and innovative ways. Its parts provide together a broad picture of opposing trends and tensions in media convergence, by underlining the relevance of this powerful idea and emphasizing the misconceptions that it has generated. Sergio Sparviero, Corinna Peil, Gabriele Balbi and the other authors look into practices and realities of users in convergent media environments, ambiguities in the production and distribution of content, changes to the organization of media industries, the re-configuration of media markets, and the influence of policy and regulations. Primarily addressed to scholars and students in different fields of media and communication studies, Media Convergence and Deconvergence deconstructs taken-for-granted concepts and provides alternative and fresh analyses on one of the most popular topics in contemporary media culture. Avalanche of Leads Dr. Elaine Williams-Morgan, 2023-09-27 In this informative book, Dr. Elaine Williams-Morgan explores social media, one of the greatest innovations of our time, chronicling its development from the early beginnings to the current time when there are over two hundred social networking platforms. The book

highlights the disruptive character of social media and its commonalities with other disruptive technologies. The disruption is being experienced across a range of industries, including music, advertising, and the traditional media, as journalists, educators, and businesses take advantage of the critical mass that this innovation delivers. It outlines the avalanche of social media platforms available to users, led by Facebook, YouTube, and WhatsApp, and provides a roadmap for the development of an appropriate social media policy and strategy for navigating the digital era. The power inherent in the adoption of social networking tools to reduce marketing and promotional costs, facilitate efficiency and effectiveness in communication, and drive collaboration and innovation is underscored. These trends predict an increase in the number of social networking platforms and a broadening of the scope of these platforms. There is also an indication that as Internet access expands globally, a higher percentage of the global population will go online using their mobile devices and, specifically, for social networking. These developments, Avalanche of Leads emphasizes, make it imperative for individuals and businesses alike to take the steps necessary to develop a winning social media strategy that employs tools that have become important for life and business. A failure in this regard could mean being left out of the social media ecosystem, an environment rich with opportunities to thrive!

End-of-chapter discussion questions prompt further critical thinking and research.
