**VoIP Performance Management and Optimization** Adeel Ahmed, Habib Madani, Talal Siddiqui, 2010-07-29 VoIP Performance Management and Optimization A KPI-based approach to managing and optimizing VoIP networks IP Communications Adeel Ahmed, CCIE® No. 4574 Habib Madani Talal Siddiqui, CCIE No. 4280 VoIP Performance Management and Optimization is the first comprehensive, expert guide to managing, monitoring, troubleshooting, and optimizing large VoIP networks. Three leading Cisco VoIP experts bring together state-of-the-art techniques for ensuring that customer service level agreements (SLA) are consistently met or exceeded. The authors begin by reviewing how VoIP is deployed in enterprise and service provider networks and the performance tradeoffs and challenges associated with each leading VoIP deployment model. Next, they present a comprehensive approach to diagnosing problems in VoIP networks using key performance indicators (KPI) and proactively addressing issues before they impact service. In this book, you will find a proven tools-based strategy for gauging VoIP network health and maximizing performance and voice quality. You also will learn how to perform trend analysis and use the results for capacity planning and traffic engineering—thereby optimizing your networks for both the short- and long-term. The authors all work in the Cisco Advanced Services Group. Deploy, manage, monitor, and scale multivendor VoIP networks more effectively Integrate performance data from multiple VoIP network segments and service flows to effectively manage SLAs Use performance counters, call detail records, and call agent trace logs to gauge network health in real time Utilize dashboards to analyze and correlate VoIP metrics, analyze trends, and plan capacity Implement a layered approach to quickly isolate and troubleshoot both localized and systemic problems in VoIP networks Optimize performance in networks where the service provider owns the “last mile” connection Improve performance when VoIP is deployed over publicly shared infrastructure Manage performance in enterprise networks using both centralized and distributed call processing Plan media deployment for the best possible network performance Monitor trends, establish baselines, optimize existing resources, and identify emerging problems Understand and address common voice quality issues This IP communications book is part of the Cisco Press® Networking Technology Series. IP communications titles from Cisco Press help networking professionals understand voice and IP telephony technologies, plan and design converged networks, and implement network solutions for increased productivity. Creating a Trading Floor Charles Smith, 2007-02-03 The design and successful implementation of a new and technically ground-breaking trading floor is one of the most challenging and exciting projects a senior IT professional can undertake. Not only must the project arrive faultlessly to time,

incorporating some of the most advanced technologies available, but it must do so within a highly regulated environment, complying with international legislation, data security and corporate governance. Creating a Trading Floor, set to become the project manager's bible, draws on the author's vast experience to provide a uniquely authoritative and comprehensive reference source and practical step-by-step guide for project teams undertaking the design and implementation of new trading floors and data centres. Its core premise is that, although language and cultural issues must be addressed, the same rules of engagement, strategies and project management techniques can apply in all of the world's major financial centres - New York, Chicago, London, Frankfurt, Paris, Singapore, Tokyo and Hong Kong.

**Information technology DOD needs to improve process for ensuring interoperability of telecommunications switches.** ,2002 See report DOD does not have a well-defined process, including clear requirements, for certifying and authorizing telecommunications (telecom) switches. DOD's process is not fully documented, current, or complete. Additionally, the process lacks an effective enforcement mechanisms. As a result, DOD is increasing the risk that its certification and authorization process will be applied inconsistently and that the department's telecommunications will experience future interoperability problems. DOD attributed these weaknesses to the fact that the process is relatively new and still evolving. Further, DOD has not applied its telecom switch certification and authorization process consistently across vendors, and it has in some cases violated the department's interoperability policy. For example, while the Army required one vendor to remove its uncertified switch from one location, it allowed another vendor to install its uncertified switch at two locations, which violated the policy. However, in reviewing this and other examples of DOD's application of the interoperability certification and authorization process, GAO did not find that contracting laws and regulations had been violated.
