*Net Neutrality: Contributions to the Debate* Jorge Pérez Martínez (Coord.),2011-03-30 After a decade of discussion on how to guarantee an open, sustainable internet and often intense debate regarding the Federal Communications Commission's 2009 public hearing on the application of the principles of net neutrality, on 21st December 2010 the various elements that comprise the solution to this now famous controversy were passed. This solution has not satisfied many people, and nearly everyone agrees that it will not end the debate and nor will it resolve the underlying structural problems. This book examines the source, development and viewpoints on this issue based on contributions from leading experts from the academic and business worlds in the USA and Europe who have been involved in the debate. This is a highly important book for understanding the various points of view on the very current and controversial issue of web neutrality.

**Virtual Freedom** Dawn C. Nunziato,2009-08-28 Communications giants like Google, Comcast, and AT&T enjoy increasingly unchecked control over speech. As providers of broadband access and Internet search engines, they can control online expression. Their online content restrictions—from obstructing e-mail to censoring cablecasts—are considered legal because of recent changes in free speech law. In this book, Dawn Nunziato criticizes recent changes in free speech law in which only the government need refrain from censoring speech, while companies are permitted to self-regulate. By enabling Internet providers to exercise control over content, the Supreme Court and the FCC have failed to protect the public's right to access a broad diversity of content. Nunziato argues that regulation is necessary to ensure the free flow of information and to render the First Amendment meaningful in the twenty-first century. This book offers an urgent call to action, recommending immediate steps to preserve our free speech rights online.

*Congressional Record* United States. Congress,2009 The Congressional Record is the official record of the proceedings and debates of the United States Congress. Cyberspace Law Hannibal Travis, 2013-08-21 This book explores what the American Civil Liberties Union calls the third era in cyberspace, in which filters fundamentally alter the architectural structure of the Internet, with significant implications for free speech. Although courts and nongovernmental organizations increasingly insist upon constitutional and other legal guarantees of a freewheeling Internet, multi-national corporations compete to produce tools and strategies for making it more predictable. When Google attempted to improve our access to information containing in books and the World Wide Web, copyright litigation began to tie up the process of making content searchable, and resulted in the wrongful removal of access to thousands if not millions of works. Just as the courts were insisting that using trademarks online to criticize their owners is First Amendment-protected, corporations and trade associations accelerated their development of ways to make Internet companies liable for their users' infringing words and actions, potentially circumventing free speech rights. And as social networking and content-sharing sites have proliferated, so have the terms of service and content-detecting tools for detecting, flagging, and deleting content that makes one or another corporation or trade association fear for its image or profits. The book provides a legal history of Internet regulation since the mid-1990s, with a particular focus on efforts by patent, trademark, and copyright owners to compel Internet firms to monitor their online offerings and remove or pay for any violations of the rights of others. This book will be of interest to students of law, communications, political science, government and policy, business, and economics, as well as anyone interested in free speech and commerce on the internet.

**Data Revocation on the Internet** Olga Kieselmann, 2018-01-30 After publishing data on the Internet, the data publisher loses control over it. However, there are several situations where it is desirable to revoke published information. To support this, the European Commission has elaborated the General Data Protection Regulation (GDPR). In particular, this regulation requires that controllers must delete data on user's demand. However, the data might already have been copied by third parties. Therefore, Article 17 of the GDPR includes the regulation that a controller must also inform all affected third parties about revocation requests. Hence, the controllers would need to track every access, which is hard to achieve. This technical infeasibility is a gap between the legislation and the current technical possibilities. To close it, we provide a distributed and decentralized Internet-wide data revocation service (DRS), which is based on the combination of the technical mechanisms and the obligation to follow the legal regulations. With the DRS, the user can notify automatically and simultaneously all affected controllers about her revocation request. Thus, we implicitly provide the notification of third parties about the user's request.

**Distributed Applications and Interoperable Systems** Silvia Bonomi, Etienne Rivière, 2018-06-09 This book constitutes the proceedings of the 18th IFIP International Conference on Distributed Applications and Interoperable Systems, DAIS 2018, held in Madrid, Spain, in June 2018. The 10 papers presented together with 2 short papers in this volume were carefully reviewed and selected from 33 submissions. The papers are organized in topical sections on application domains, including stream processing, video dissemination, storage, privacy protection, and large-scale orchestration.

**Organic Computing** Sven Tomforde, Bernhard Sick, 2018-05-07 This book presents the results of the OC-DDC 2017. Successful participants have been invited

to extend their abstracts submitted to the event towards a full book chapter by taking reviews and feedback received at the event in Bochum into account. Seven of the participants prepared a contribution to this book, helped to perform a sophisticated review process, and finally came up with interesting articles summarising their current work in the context of Organic Computing. Hence, the book also gives an overview of corresponding research activities in the field in Germany for the year 2017. The collection of contributions reflects the diversity of the different aspects of Organic Computing. Furthermore, group discussions during the OC-DDC resulted in a contribution that aggregates the ideas of the participants related to applied machine learning for Organic Computing systems. **Security Compliance in Model-driven Development of Software Systems in Presence of Long-Term Evolution and Variants** Sven Matthias

Peldszus, 2022-07-13 For ensuring a software system's security, it is vital to keep up with changing security precautions, attacks, and mitigations. Although model-based development enables addressing security already at design-time, design models are often inconsistent with the implementation or among themselves. An additional burden are variants of software systems. To ensure security in this context, we present an approach based on continuous automated change propagation, allowing security experts to specify security requirements on the most suitable system representation. We automatically check all system representations against these requirements and provide security-preserving refactorings for preserving security compliance. For both, we show the application to variant-rich software systems. To support legacy systems, we allow to reverse-engineer variability-aware UML models and semi-automatically map existing design models to the implementation. Besides evaluations of the individual contributions, we demonstrate the approach in two open-source case studies, the iTrust electronics health records system and the Eclipse Secure Storage.
