**Agro-industries for Development** ,2009-01-01 The development of competitive agro-industries is crucial for creating employment and income opportunities as well as enhancing the quality of and demand for farm products. This book addresses strategies required for improving agro-industrial competitiveness in ways that can generate employment and fight poverty in the developing world.

Greener Manufacturing and Operations Joseph Sarkis,2017-09-20 This timely work examines one core corporate function that has a profound and direct impact on corporate environmental performance - manufacturing and operations. This area has been of concern in recent years to researchers and practitioners in fields ranging from the social and natural sciences to management and technical engineering. The book reflects this diversity with global contributions on topics such as design for the environment, total quality environmental management, green supply chains, reverse logistics, environmental management systems and standards, industrial ecology, closed-loop manufacturing, life-cycle management, pollution prevention (P2), environmental technologies and energy efficiency. The aim and scope of Greener Manufacturing and Operations is to capture state-of-the-art and future practices in environmental manufacturing and operations practices and issues in one concise volume. The book is therefore a fluid mix of case studies, empirical research, and applied theoretical works incorporating both conceptual ideas whose time will come to practical applications which managers and practitioners can apply immediately. Comprehensive in its coverage of the key issues, contributions range from a focus on the internal operations of a single function within an organization to a consideration of industrial manufacturing practices from a macro-economic level. A number of levels of decision-making are also represented: from long-term strategic issues such as supply chain design, to traditional short-term operations decision-making and planning issues such as production planning. Many of the principles developed and presented here can also be extended to the more general process management of service organizations. The book is organized into four major sections: operations strategy and policy; manufacturing and operations practice; tools for managing greener operations and manufacturing; and, finally, case studies. Greener Manufacturing and Operations will be an essential aid for managers, engineers, students, researchers, and consultants wishing to understand the various issues, principles, and tools for managing the operations and manufacturing function in a more environmentally-benign and sustainable manner.

*Agro-industries for Development* Carlos A. Da Silva,2009 The development of competitive agro-industries is crucial for creating employment and income opportunities as well as enhancing the quality of and demand for farm products. Agro-industries can have a real effect on international development by increasing economic growth and reducing poverty in both rural and urban areas of developing countries. However, in order to avoid adverse effects to vulnerable countries and people, sound policies and strategies for fostering agro-industries are needed. Agro-Industries for Development highlights the current status and future course for agro-industries and brings attention to the contributions this sector can make to international development. The book includes contributions from agro-industry specialists, academic experts and UN technical agencies, chapters address the strategies and actions required for improving agro-industrial competitiveness in ways that can create income, generate employment and fight poverty in the developing world. This book is a co-publication with FAO and UNIDO.

**Towards a Knowledge-based Economy** Seiichi Masuyama,Donna Vandenbrink,2003-01-01 The evolution of the information and communications technology (ICT) paradigm is shifting the basis for economic activity from material and labour inputs to knowledge and information inputs, spawning the knowledge-based economy. In East Asia, it is evident that the emergence of the knowledge-based economy is disrupting the flying-geese pattern of development and creating a new industrial geography. This book gives a picture of the shifting industrial geography in the region based on accounts of the status of the knowledge-based economy in ten individual East Asian economies. For some economies the increased production of ICT equipment and services is the pathway to the knowledge-based economy and even to leapfrogging ahead of more advanced economies. Other economies are focused on putting in place the physical and institutional infrastructure to connect to electronic networks and avoid the digital divide. For yet others, the emergence of the knowledge-based economy is expanding their role in the region, adding the role of ICT hub.

**Innovation in Local Economies** Colin Crouch,Helmut Voelzkow,2009 The study of varieties of capitalism is moving on from the analysis of static national types to embrace local and sectoral diversity and the study of systems in the process of major change. This volume addresses the issue by examining four localised sectors, comparing a German case with one in another European country. The general changes taking place in Germany itself and the other countries (Hungary, Sweden, and the UK) form the context of the studies. The case studies concern:\* Furniture making in North-Rhine Westphalia and southern Sweden,\* Automotive manufacture in east Germany and northern Hungary,\* Biotechnology around Munich and Cambridge,\* TV programme and film-making in Cologne and central London.The studies find a complex pattern of conformity with, and deviation from, national types, but only occasional examples of where divergence takes the form of a direct confrontation with a national model. This is partly because national models are themselves changing; partly because they are often capable of accommodating more diversity than is often assumed by national studies; and partly because firms are increasingly able to reach outside their national boundaries for institutional resources.

**Advances in raw material industries for sustainable development goals** Vladimir Litvinenko,2020-12-29 Advances in Raw Material Industries for Sustainable Development Goals presents the results of joint scientific research conducted in the context of the Russian-German Raw Materials Forum. Today Russia and Germany are exploring various forms of cooperation in the field of mining, geology, mineralogy, mechanical engineering and energy. Russia and Germany are equally interested in expanding cooperation and modernizing the economy in terms of sustainable development. The main theme of this article collection is connected with existing business ventures and ideas from both Russia and Germany. In this book the authors regard complex processes in mining industry from various points of view, including: - modern technologies in prospecting, exploration and development of mineral resources - progressive methods of natural and industrial mineral raw materials processing - energy technologies and digital technologies for sustainable development - cutting-edge technologies and innovations in the oil and gas industry. Working with young researchers, supporting their individual professional development and creating conditions for their mobility and scientific cooperation are essential parts of Russian-German Raw Materials Forum founded in Dresden 13 years ago. This collection represents both willingness of young researchers to be involved in large-scale international projects like Russian-German Raw Material Forum and the results of their long and thorough work in the promising areas of cooperation between Russia and Germany.

*Digital Disruption and Media Transformation* Alexander Godulla,Stephan Böhm,2023-10-19 This book presents a comprehensive compilation of the latest research into digital disruption in the media industry. The perspectives are differentiated into innovation triggers in the media industry stemming from the economy, society and technology. In addition, the book highlights selected case studies exploring new media actors and usage, innovation and disruption in media organizations, emerging media platforms and channels, as well as innovative media topics and events. The book is intended for researchers in communication sciences and media research, as well as media practitioners who want to understand the causes and effects of digital transformation in the media industry.

**Sustainable Development at Risk** Joseph H. Hulse,2007 Over the past half century, the idea of sustainable development has drastically evolved and rooted itself in the lexicon of international development. But what is it, really? Are development agencies truly committed to long-term sustainable solutions to development issues? Are we learning from our past successes and failures? This book takes an historical perspective on these

questions. The analysis begins with the Atlantic Charter, the creation of the United Nations, its family of agencies, and the international development banks. It reviews recommendations from international commissions and conferences, from World Bank and UNDP Human Development Reports. It comments on governmental policies, human and industrial actions detrimental to the planetOCO's environment and natural resources. It studies the patterns by which biotechnologies essential to human survival and health have progressed over the past 6000 years, and the consequences of uncontrolled urban growth on food and health security. The author hopes that this book will be OC informative and helpful to all who care about human suffering and degradation of the EarthOCO's environment and resources, in particular to men and women who are newcomers to international, governmental, and nongovernmental aid and assistance programs.OCO

**Territorial tools for agro-industry development** Food and Agriculture Organization of the United Nations,2018-08-09 This sourcebook appraises these instruments and considers their nature and objectives, their potential benefits and challenges and the approaches used to implement them. It also examines the practices that have led to both successful and unsuccessful outcomes. The publication provides a comprehensive review of the potential of these tools to enhance value addition, deliver jobs, increase exports and provide markets for new and existing producers in the targeted territories. It notes, however, that implementation of these tools poses a number of challenges. For example, planners and practitioners sometimes use them interchangeably, thus ignoring the specificities of the investments, policies and processes required, and their expected outcomes. The sourcebook concludes that these tools have potential for catalytic impact, but planners need to make sound choices that respect demonstrated principles and follow good practices for effective design and implementation.

**Gender Inequality and Economic Growth: Evidence from Industry-Level Data** Ata Can Bertay,Ljubica Dordevic,Can Sever,2020-07-03 We study whether higher gender equality facilitates economic growth by enabling better allocation of a valuable resource: female labor. By allocating female labor to its more productive use, we hypothesize that reducing gender inequality should disproportionately benefit industries with typically higher female share in their employment relative to other industries. Specifically, we exploit within-country variation across industries to test whether those that typically employ more women grow relatively faster in countries with ex-ante lower gender inequality. The test allows us to identify the causal effect of gender inequality on industry growth in value-added and labor productivity. Our findings show that gender inequality affects real economic outcomes.

**The Industrial Policy Revolution II** J. Esteban,J. Stiglitz,Justin Lin Yifu,2013-12-13 This volume is the result of the 2012 International Economic Association's series of roundtables on the theme of Industrial Policy. The first, 'New Thinking on Industrial Policy,' was hosted by the World Bank in Washington, D.C, and the second, 'New Thinking on Industrial Policy: Implications for Africa,' was held in Pretoria, South Africa.

Media Innovations AR and VR Elle Langer,2023-01-23 Augmented and virtual reality are media innovations with specific characteristics. They create immersion in the user, as the user is immersed in the medium and its 360° environment. To successfully develop content and applications for AR and VR, psychological effects, the specifics of the 360° environment, the story, and the way the media is used must be aligned with the needs and experiences of the user. Content producers face novel challenges in content development, method selection, teamwork, and the overall production process of AR and VR experiences. The book introduces readers to the characteristics of immersive media and provides scientific evidence and practical tips to help them produce high-quality, user-centric content for immersive media. The scientifically derived success factors in the form of checklists are a guide and an ideal basis for standardizing the production process and further developing one's own projects. This book is a translation of the original German 1st edition Medieninnovationen AR und VR by Elle Langer, published by Springer-Verlag GmbH Germany, part of Springer Nature in 2020. The translation was done with the help of artificial intelligence (machine translation by the service DeepL.com). A subsequent human revision was done primarily in terms of content, so that the book will read stylistically differently from a conventional translation. Springer Nature works continuously to further the development of tools for the production of books and on the related technologies to support the authors.

**World Development Report 2016** World Bank Group,2016-01-14 Digital technologies are spreading rapidly, but digital dividends--the broader benefits of faster growth, more jobs, and better services--are not. If more than 40 percent of adults in East Africa pay their utility bills using a mobile phone, why can't others around the world do the same? If 8 million entrepreneurs in China--one third of them women--can use an e-commerce platform to export goods to 120 countries, why can't entrepreneurs elsewhere achieve the same global reach? And if India can provide unique digital identification to 1 billion people in five years, and thereby reduce corruption by billions of dollars, why can't other countries replicate its success? Indeed, what's holding back countries from realizing the profound and transformational effects that digital technologies are supposed to deliver? Two main reasons. First, nearly 60 percent of the world's population are still offline and can't participate in the digital economy in any meaningful way. Second, and more important, the benefits of digital technologies can be offset by growing risks. Startups can disrupt incumbents, but not when vested interests and regulatory uncertainty obstruct competition and the entry of new firms. Employment opportunities may be greater, but not when the labor market is polarized. The internet can be a platform for universal empowerment, but not when it becomes a tool for state control and elite capture. The World Development Report 2016 shows that while the digital revolution has forged ahead, its 'analog complements'--the regulations that promote entry and competition, the skills that enable workers to access and then leverage the new economy, and the institutions that are accountable to citizens--have not kept pace. And when these analog complements to digital investments are absent, the development impact can be disappointing. What, then, should countries do? They should formulate digital development strategies that are much broader than current information and communication technology (ICT) strategies. They should create a policy and institutional environment for technology that fosters the greatest benefits. In short, they need to build a strong analog foundation to deliver digital dividends to everyone, everywhere.
