*Civil-Military Relations in Chinese History* Kai Filipiak,2014-12-17 Modern studies of civil--military relations recognise that the military is separate from civil society, with its own norms and values, principles of organization, and regulations. Key issues of concern include the means by which - and the extent to which - the civil power controls the military; and also the ways in which military values and approaches permeate and affect wider society. This book examines these issues in relation to China, covering the full range of Chinese history from the Zhou, Qin, and Han dynasties up to the Communist takeover in 1949. It traces how civil--military relations were different in different periods, explores how military specialization and professionalization developed, and reveals how military weakness often occurred when the civil authority with weak policies exerted power over the military. Overall, the book shows how attitudes to the military's role in present day Communist China were forged in earlier periods.

**Evidence Contestation** Karin Zachmann, Mariacarla Gadebusch Bondio, Saana Jukola, Olga Sparschuh, 2023-02-21 This book examines the practices of contesting evidence in democratically constituted knowledge societies. It provides a multifaceted view of the processes and conditions of evidence criticism and how they determine the dynamics of de- and re-stabilization of evidence. Evidence is an essential resource for establishing claims of validity, resolving conflicts, and legitimizing decisions. In recent times, however, evidence is being contested with increasing frequency. Such contestations vary in form and severity – from questioning the interpretation of data or the methodological soundness of studies to accusations of evidence fabrication. The contributors to this volume explore which actors, for what reasons and to what effect, question evidence in fields such as the biological, environmental and health sciences. In addition to actors inside academia, they

examine the roles of various other players, including citizen scientists, counter-experts, journalists, patients, consumers and activists. The contributors tackle questions of how disagreements are framed and how they are used to promote vested interests. By drawing on methodological and theoretical approaches from a wide range of fields, this book provides a much-needed perspective on how evidence criticism influences the development and state of knowledge societies and their political condition. Evidence Contestation will appeal to scholars and advanced students working in philosophy of science, epistemology, bioethics, science and technology studies, the history of science and technology and science communication.

Big Data and Armed Conflict Laura A. Dickinson, Edward W. Berg, 2023 Data is emerging as a key component of military operations, both on and off the battlefield. Large troves of data generated by new information technologies—often termed big data—are growing ever more important to a range of military functions. Military forces and other actors will increasingly need to acquire, evaluate, and utilize such data in many combat contexts. At the same time, those forces can gain advantages by targeting adversaries' data and data systems. And a multitude of actors within armed conflict, including humanitarian and human rights organizations, can also use big data to deliver aid or identify atrocities. Such myriad uses of big data raise challenging interpretive questions under international humanitarian law (IHL), the *jus ad bellum*, and international human rights law. This book is the first of its kind to examine how these bodies of international law might apply to the uses of big data specifically. Focusing on IHL, the book also assesses how *jus ad bellum* categories might translate to operations involving big data below the armed conflict threshold. And because big data is profoundly transforming modern life off the battlefield as well, the book explores questions beyond the role of big data within weapons systems and other military capabilities to questions about the nature of civilian

harm and scope of individual rights. This book offers a range of approaches and ideas to this timely issue, and offers an initial roadmap for scholars, policymakers, and advocates to follow as they address the challenges still to come--

Economic Models for Managing Cloud Services Sajib Mistry,Athman Bouguettaya,Hai

Dong,2018-02-10 The authors introduce both the quantitative and qualitative economic models as optimization tools for the selection of long-term cloud service requests. The economic models fit almost intuitively in the way business is usually done and maximize the profit of a cloud provider for a long-term period. The authors propose a new multivariate Hidden Markov and Autoregressive Integrated Moving Average (HMM-ARIMA) model to predict various patterns of runtime resource utilization. A heuristic-based Integer Linear Programming (ILP) optimization approach is developed to maximize the runtime resource utilization. It deploys a Dynamic Bayesian Network (DBN) to model the dynamic pricing and long-term operating cost. A new Hybrid Adaptive Genetic Algorithm (HAGA) is proposed that optimizes a non-linear profit function periodically to address the stochastic arrival of requests. Next, the authors explore the Temporal Conditional Preference Network (TempCP-Net) as the qualitative economic model to represent the high-level IaaS business strategies. The temporal qualitative preferences are indexed in a multidimensional k-d tree to efficiently compute the preference ranking at runtime. A three-dimensional Q-learning approach is developed to find an optimal qualitative composition using statistical analysis on historical request patterns. Finally, the authors propose a new multivariate approach to predict future Quality of Service (QoS) performances of peer service providers to efficiently configure a TempCP-Net. It discusses the experimental results and evaluates the efficiency of the proposed composition framework using Google Cluster data, real-world QoS data, and synthetic data. It also explores the significance of the proposed approach in creating an economically viable and stable cloud market. This book can be utilized as a useful reference to anyone who is interested in theory, practice, and application of economic models in cloud computing. This book will be an invaluable guide for small and medium entrepreneurs who have invested or plan to invest in cloud infrastructures and services. Overall, this book is suitable for a wide

audience that includes students, researchers, and practitioners studying or working in service-oriented computing and cloud computing.

*Sequel of Dragon Oath* Yi MuYouZi,2020-04-15 Buddha said: The Eight Tribes of Heaven Dragon, Man and Man, all see the Dragon Lady become Buddha. As for the gods, the dragons, the yakshas, the kanda, the asura, the garuda, and the mandara. After the Dragon and Heaven, the most tragic one was Carrolo, because he was Yue Fei's embodiment. Carrolo was a kind of giant bird with all kinds of solemn and precious colors on its wings. Legend has it that Yue Fei was the reincarnation of the Golden Winged Roc, and Jia Luo was the reincarnation of the Golden Winged Roc. When its life ended, the dragons vomited poison and were no longer able to eat. As a result, Garuda flew up and down seven times before finally dying on top of the Vajra Mountain. The complicated plot, ups and downs, locked in a clumsy work, all of this is in the Heavenly Dragon's Eight Postscript. [Previous Chapter] [Table of Contents] [Next Chapter] Close]
