**Principles of Osteoarthritis** Bruce M. Rothschild,2012-02-22 This volume addresses the nature of the most common form of arthritis in humans. If osteoarthritis is inevitable (only premature death prevents all of us from being afflicted), it seems essential to facilitate its recognition, prevention, options, and indications for treatment. Progress in understanding this disease has occurred with recognition that it is not simply a degenerative joint disease. Causative factors, such as joint malalignment, ligamentous abnormalities, overuse, and biomechanical and metabolic factors have been recognized as amenable to intervention; genetic factors, less so; with metabolic diseases, intermediate. Its diagnosis is based on recognition of overgrowth of bone at joint margins. This contrasts with overgrowth of bone at vertebral margins, which is not a symptomatic phenomenon and has been renamed spondylosis deformans. Osteoarthritis describes an abnormality of joints, but the severity does not necessarily produce pain. The patient and his/her symptoms need to be treated, not the x-ray.

**Advances in Mechanical Problems of Functionally Graded Materials and Structures** Indra Vir Singh,Tiantang Yu,Le Van Lich,Tinh Quoc Bui,2019-10-28 The book deals with novel aspects and perspectives in functionally graded materials (FGMs), which are advanced engineering materials designed for a specific performance or function with spatial gradation in structure and/or composition. The contributions mainly focus on numerical simulations of mechanical properties and the behavior of FGMs and FGM structures. Several advancements in numerical simulations that are particularly useful for investigations on FGMs have been proposed and demonstrated in this Special Issue. Such proposed approaches provide incisive methods to explore and predict the mechanical and structural characteristics of FGMs subjected to thermoelectromechanical loadings under various boundary and environmental conditions. The contributions have resulted in enhanced activity regarding the prediction of FGM properties and global structural responses, which are of great importance when considering the potential applications of FGM structures. Furthermore, the presented scientific scope is, in some way, an answer to the continuous demand for FGM structures, and opens new perspectives for their practical use.

Confocal Microscopy Jian Liu, Jiubin Tan,2016-12-21 The confocal microscope is appropriate for imaging cells or the measurement of industrial artefacts. However, junior researchers and instrument users sometimes misuse imaging concepts and metrological characteristics, such as position resolution in industrial metrology and scale resolution in bio-imaging. And, metrological characteristics or influence factors in 3D measurement such as height assessment error caused by 3D coupling effect are so far not yet identified. In this book, the authors outline their practices by the working experiences on standardization and system design. This book assumes little previous knowledge of optics, but rich experience in engineering of industrial measurements, in particular with profile metrology or areal surface topography will be very helpful to understand the theoretical concerns and value of the technological advances. It should be useful for graduate students or researchers as extended reading material, as well as microscope users alongside their handbook.

The Potential Effects and Mechanisms of Chinese Traditional Medicine on Bone Homeostasis and Remodeling Jun Liu,Bo Liu,Xiaoqin Wu,Qi Wang,2023-09-20 Osteoporosis is a systemic skeletal disease, strongly affecting postmenopausal women and characterized by an increased risk of bone fragility and a decrease in bone mass. Bone homeostasis requires a balance between bone-forming osteoblasts and bone-resorbing osteoclasts. When this balance is impaired, normal bone remodelling cannot keep bone mass stable, leading to osteopenia and osteoporosis. About 30–50% of all women in the world suffer from fractures due to osteoporosis throughout their lives. The treatments include improving metabolic abnormalities through complementary and alternative therapies, drug application and surgical therapy for the management of overweight, obesity and hormone metabolism disorder. Chinese traditional medicine has been increasingly considered as an effective therapy for osteoporosis. A series of formulae, herbs and natural products have been indicated for their effects in the prevention and treatment of osteoporosis, such as Liu-Wei-Di-Huang Wan (formula), Morindae Officinalis Radix (herb), Longspur epimedium glycoside (natural product). However, the mechanisms of action remain largely unexplored.

**Letters from Home to Wuhan** ,2021-08-25 Letters from Home to Wuhan By: Compiled by Zhao Nianmin, Li Haiyan and Lan Chuanbin; Translated by Sun Hongshan Ever since the People's Republic of China was founded in 1949, the coronavirus disease (COVID-19) is the most serious public health emergency. Then the virus spread rapidly in this country, inspiring terror in people. To ward off a greater calamity, 1,775 doctors and nurses in 12 batches from Shandong went to the epidemic-stricken Hubei at the call of duty. Brave and professionally dedicated, they have completed their work with great success: None of them were infected, none of their patients died, and none of the cured cases turned positive again. At the front line the 1,775 medical workers are armored fighters, but at home they are also sons, daughters, wives, husbands or parents. With a quick change of role, they vent in letters their conflicting feelings of pride and horror, of joys and sorrows, and of affection for family and devotion to duty. So, for this spring, letter has been the most heartwarming, the most acute, the most candid, and the most delicate form to express feelings.
