Introduction to Media Distribution Scott Kirkpatrick,2023-12-04 In this second edition, author Scott Kirkpatrick draws from over a decade of personal experience in the distribution arena to provide a clear and up-to-date overview of the entire film, television, and new media distribution business. Readers will learn what fuels the distribution process and exactly how the distribution business works from beginning to end—not merely what happens to a film or television series upon acquisition, but how distributors develop, presell and broker deals on content before it even exists. This new edition considers a much more international approach to media distribution, with case studies and analyses from across the globe. It also reflects on the ever-increasing relevance of diversity and inclusiveness in the industry, as well as the new media verticals like podcasts and the

effects of social media influencers on the media landscape. The book will be an integral guidebook for any student or professional wishing to understand both the basics and the subtleties of media distribution. The book also contains a robust appendix containing in-depth studies of legal definitions, material delivery requirements, territory-by-territory financial projections and more.

Race Talk in the South African Media Gawie Botma,2020-01-06 This book makes a very significant, timely and relevant contribution to a very topical subject of immense local as well as global interest. Through tracing the evolution of media discourse about race and racism, which the author prefers to call 'race talk', the writer prised open a window to a panoramic, variegated and yet nuanced perspective of the perennial South African race question etched across the vistas of time and memory since Jan Van Riebeeck set up the first European settlement as a refreshment station for the Dutch East India Company, at the Cape of Good Hope in 1652 up to the time of writing this book. It lends a fresh lens through which to re-read South African society, not only to a studious scholar of media history but also to anybody interested in the general history of South Africa. - Dr Zvenyika Mugari, WITS This book is based on meticulous archival searching, presented in a new, fresh and highly engaging way. This is a book based on evidentiary-led scholarly principles that has lucidity as a goal. Unlike so many scholarly works which are turgid and very difficult to read because they are written in restricted codes meant only for other academics, this manuscript is wonderfully lucid, accessible and a pleasure to read. The prime readership will be academics but its lucidity makes it appealing beyond a purely academic readership, hopefully reaching media professionals and students also and influencing debates on race policy. This is how academic books, in fact, should be written. - Prof Keyan Tomaselli, University of Johannesburg The author has embarked on a very difficult and complex task of understanding the race construct in the South African media context. This is a highly contested and contentious space in South Africa and it is particularly arduous for a "white, middle-class, middle-aged, Afrikaans male" to navigate this space. The author has however eloquently managed to pilot this fine line of controversy. He offers a balanced view of the belligerent debate without treading insensitively on the toes of protagonists and at the same time challenges prevailing views. - André Rose, National Cancer Institute

Media Ownership and Concentration in America Eli Noam,2009-10-19 After examining 100 separate media and network industries in detail, Noam provides a powerful summary and analysis of concentration trends across industries and major media sectors. Central and Eastern European Media in Comparative Perspective Sabina Mihelj,2016-04-15 Appearing more than twenty years after the revolutions in Central and Eastern Europe, this book could not have come at a more appropriate time; a time to take stock not only of the changes but also the continuities in media systems of the region since 1989. To what extent are media institutions still controlled by political forces? To what extent are media markets operating in Central and Eastern Europe? Do media systems in Central and Eastern Europe resemble media systems in other parts of Europe? The answers to these questions are not the same for each country in the region. Their experience is not homogeneous. An international line up of distinguished experts and emerging scholars methodically examine the different economic, political, cultural, and transnational factors affecting developments in media systems across Central and Eastern Europe. Whereas earlier works in the media system tradition have, in the main, adopted the political framework of comparative politics, the authors argue that media systems are also cultural and economic institutions and there are other critical variables that might explain certain outcomes better. Topics discussed range from political economy to gender inequality to the study of ethno-cultural diversity. This unmatched volume gives you the unique opportunity to study the growing field of comparative media analysis across Eastern and Western Europe. A valuable resource that goes beyond the field of media and cultural analysis which media scholars as well as to area specialists should not go without!

Aerogels Handbook Michel Andre Aegerter,Nicholas Leventis,Matthias M. Koebel,2011-06-10 Aerogels are the lightest solids known. Up to 1000 times lighter than glass and with a density as low as only four times that of air, they show very high thermal, electrical and acoustic insulation values and hold many entries in Guinness World Records. Originally based on silica, R&D efforts have extended this class of materials to non-silicate inorganic oxides, natural and synthetic organic polymers, carbon, metal and ceramic materials, etc. Composite systems involving polymer-crosslinked aerogels and interpenetrating hybrid networks have been developed and exhibit remarkable mechanical strength and flexibility. Even more exotic aerogels based on clays, chalcogenides, phosphides, quantum dots, and biopolymers such as chitosan are opening new applications for the construction, transportation, energy, defense and healthcare industries. Applications in electronics, chemistry, mechanics, engineering, energy production and storage, sensors, medicine, nanotechnology, military and aerospace, oil and gas recovery, thermal insulation and household uses are being developed with an estimated annual market growth rate of around 70% until 2015. The Aerogels Handbook summarizes state-of-the-art developments and processing of inorganic, organic, and composite aerogels, including the most important methods of synthesis, characterization as well as their typical applications and their possible market impact. Readers will find an exhaustive overview of all aerogel materials known today, their fabrication, upscaling aspects, physical and chemical properties, and most recent advances towards applications and commercial products, some of which are commercially available today. Key Features: •Edited and written by recognized worldwide leaders in the field •Appeals to a broad audience of materials scientists, chemists, and engineers in academic research and industrial R&D •Covers inorganic, organic, and composite aerogels •Describes military, aerospace, building industry, household, environmental, energy, and biomedical applications among others
