Wound Healing Vlad Alexandrescu,2016-10-12 Outstanding scientific advances over the last decades unceasingly reveal real complexity of wound-healing process, astonishing in its staged progression, as life is unfolding itself. This natural course of tissue repair seems to bear thousands of overlapping molecular and macroscopic processes that nowadays only start to unfold to our knowledge. The present volume collecting recent scientific references proposes to readers a two-folded audacious goal. First, an updated design of intimate cellular mechanisms is entailed in tissue regeneration that emanates from the first section of the book. Next, a multidisciplinary therapeutic perspective that focuses on macroscopic healing throughout the second part of this work adds clinically integrated observation. Practical diagnostic and treatment information is appended in each chapter that may equally help experienced clinicians or dedicated students and researchers in broadening essential breaking points of their work. It is the wish of all multidisciplinary experts who gather prominent author's panel of this volume to incorporate latest medical reports and compel limits of current understanding for better tissue regeneration, limb salvage, and improved quality of life of our patients.

DHealth 2022 G. Schreier,B. Pfeifer,M. Baumgartner,2022-06-17 Digital technology is now an indispensable part of modern healthcare, and this reliance is only likely to increase, with the healthcare of the future set to become ever more data-driven, decision-supporting, deep, and simply more digital. This book presents the proceedings of the 16th annual conference on Health Informatics Meets Digital Health (dHealth 2022), held on 24 and 25 May 2022 in Vienna, Austria. In keeping with its interdisciplinary mission, the conference series provides a platform for researchers and decision makers, health professionals and healthcare providers, as well as government and industry representatives, to discuss innovative digital health solutions to improve the quality and efficiency of healthcare using digital technologies. The book includes 42 papers covering a wide range of topics and providing an insight into the state-of-the-art of different aspects of dHealth, including the design and evaluation of user interfaces, patient-centered solutions, electronic health/medical/patient records, machine learning in healthcare and biomedical data analytics. Offering the reader an interdisciplinary view of the state-of-the-art and of ongoing research activities in digital health, the book will be of interest to healthcare students and professionals everywhere.

Ballistic Trauma Peter F. Mahoney,James Ryan,Adam J. Brooks,C. William Schwab,2005-12-27 Ballistic Trauma: A Practical Guide provides a concise guide to the clinical and operational issues surrounding the management of the ballistic casualty. The book crystallizes the knowledge and experience accrued by those dealing with ballistic trauma on a regular basis and extends this to those who have to manage these patients on an occasional basis only. This book is aimed at all medical and paramedical personnel involved in the care of patients with ballistic injury. It will be especially relevant for consultants and senior trainees in surgery, anesthesia and emergency medicine who are likely to be involved in the management of these unique injuries. It will be an essential reference for pre-hospital care providers and nurses working in the emergency room and intensive care. Military surgeons and medical and nursing staff on deployment in regions of conflict will find the book a valuable resource.

THE THIRTEENTH JUROR Nelda Holder,2015-11-13 The death of Michael Brown, Jr., in Ferguson, Missouri, on August 9, 2014, has become a touchstone for reform in three areas of American society: the high incidence of black citizens killed by white policemen; the pattern and effect of systemic racism in the country's criminal justice system; the need for study and reform of current federal and state grand jury systems. The Thirteenth Juror illustrates the pitfalls of the grand jury system by inviting readers to take a seat with the 12 people selected as grand jurors in the Michael Brown case, and to share the evidence and process they went through. Details that were not openly or adequately questioned are highlighted, and the impact of the posture and attitude of the prosecuting attorneys is explored. Disparities are uncovered in the narrative of Ferguson Police Officer Darren Wilson, who was responsible for Brown's death, and the process of informing – or misinforming – jury members regarding the law(s) governing their deliberations is given critical attention. Ultimately, throughout the 24 days of testimony, the deeply human side of this tragedy is shared. And measured against the history of the grand jury process itself, this is a case study illustrating the need for examination and reform.

Pathophysiology of Shock, Sepsis, and Organ Failure Günther Schlag,Heinz Redl,2012-12-06 In this book current knowledge of the pathophysiology of shock, sepsis and multi organ failure is presented. The rapid progress which has been made and the results achieved in intensive care medicine are based on sound basic research, which is duly reflected in these chapters. Multiorgan failure is the foremost cause of postoperative and posttraumatic death and many complex mechanisms are involved. Only with a good foundation of basic research can abnormalities in the physiological, biochemical, and morphological course of shock be recognized and the necessary conclusions for treatment drawn. Therapy must proceed from profound knowledge of the multi variant physiological events in order to influence shock, sepsis and organ failure. Although numerous possibilities for therapy have arisen from pharmaceutical research in recent years, they are beyond the scope of this book and are not discussed here. To gain a better understanding of the pathophysiological events it was necessary to examine and to describe different models that simulate and reproduce these events. Here we describe the causative agents (shock) and the consequences (sepsis, organ failure) in two main sections, divided on the basis of their pathophysiology.

Geriatric Emergencies Amal Mattu,Shamai Grossman,Peter Rosen,Robert Anderson,Christopher R. Carpenter,Andrew Chang,Jon Mark Hirshon,Ula Hwang,Maura Kennedy,Don Melady,Vaishal Tolia,Scott Wilbur,2016-07-12 The elderly represent the fastest growing segment of the population in developed countries, reflected in the patient population presenting to EDs and hospitals. These patients more often than not have greater co-morbidities, more complicated workups and utilize more laboratory and radiologic services. This text is designed to teach emergency physicians how best to care for this specific demographic of patients. It addresses physiologic changes, high-risk conditions, and atypical presentations associated with elderly patients in the ED that result in frequent misdiagnosis or delays in diagnosis. It instructs the readers how best to care for elderly patients in order to minimize morbidity and mortality, addressing some of the difficult psychosocial issues that confront health care providers that care for elderly patients, such as psychiatric disease and end-of-life care. The utility of this text is not limited to emergency physicians, but it should be useful to all health care providers involved in the treatment of elderly patients with acute medical or surgical conditions.
