Introduction to Computing V. A. Dyck, John Douglas Lawson, J. A. Smith, 1979

Atmospheric Radiation R. M. Goody, Y. L. Yung, 1995-12-07 A complete revision of Goody's classic 1964 work, this volume offers a systematic discussion of atmospheric radiation processes that today are at the center of worldwide study and concern. It deals with the ways in which incident solar radiation is transformed into scattered and thermal radiation, and the thermodynamic consequences for the Earth's gaseous envelope, identifying aspects of the interaction between radiation and atmospheric motions as the central theme for atmospheric radiation studies. As a complete treatment of physical and mathematical foundations, the text assumes no prior knowledge of atmospheric physics. The theoretical discussion is systematic, and can therefore be applied with minor extension to any planetary atmosphere.

Innovative Mobile and Internet Services in Ubiquitous

Computing Leonard Barolli,Fatos Xhafa,Omar K.

Hussain,2019-06-18 This book highlights the latest research findings, methods and techniques, as well as challenges and solutions related to Ubiquitous and Pervasive Computing (UPC). In this regard, it employs both theoretical and practical perspectives, and places special emphasis on innovative, mobile and internet services. With the proliferation of wireless technologies and electronic devices, there is a rapidly growing interest in Ubiquitous and Pervasive Computing (UPC). UPC makes it possible to create a human-oriented computing environment in which computer chips are embedded in everyday objects and interact with the physical world. Through UPC, people can remain online even while underway, thus enjoying nearly permanent access to their preferred

services. Though it has a great potential to revolutionize our lives, UPC also poses a number of new research challenges.

Soft Computing and Industry Rajkumar Roy, Mario

Köppen, Seppo Ovaska, Takeshi Furuhashi, Frank

Hoffmann, 2012-12-06 Soft computing embraces various

methodologies for the development of intelligent systems that have been successfully applied to a large number of real-world

problems. Soft Computing in Industry contains a collection of papers that were presented at the 6th On-line World Conference

on Soft Computing in Industrial Applications that was held in

September 2001. It provides a comprehensive overview of recent

theoretical developments in soft computing as well as of successful industrial applications. It is divided into seven parts covering

material on: keynote papers on various subjects ranging from

computing with autopoietic systems to the effects of the Internet on education; intelligent control; classification, clustering and

optimization; image and signal processing; agents, multimedia and Internet; theoretical advances; prediction, design and diagnosis.

The book is aimed at researchers and professional engineers who develop and apply intelligent systems in computer engineering.

Patterns and Skeletons for Parallel and Distributed Computing

Fethi A. Rabhi, Sergei Gorlatch, 2011-06-28 Patterns and Skeletons for Parallel and Distributed Computing is a unique survey of research work in high-level parallel and distributed computing over the past ten years. Comprising contributions from the leading researchers in Europe and the US, it looks at interaction patterns and their role in parallel and distributed processing, and demonstrates for the first time the link between skeletons and design patterns. It focuses on computation and communication structures that are beyond simple message-passing or remote procedure calling, and also on pragmatic approaches that lead to practical design and programming methodologies with their associated compilers and tools. The book is divided into two parts which cover: skeletons-related material such as expressing and composing skeletons, formal transformation, cost modelling and languages, compilers and run-time systems for skeleton-based programming.- design patterns and other related concepts, applied to other areas such as real-time, embedded and distributed systems. It will be an essential reference for researchers undertaking new projects in this area, and will also provide useful background reading for advanced undergraduate and postgraduate courses on parallel or distributed system design.

Computing Information Technology Steven R.

Gordon,2003-01-01 From the senior management to the clerical and support group levels, this study addresses the possible pitfalls and triumphs of implementing information technology (IT) into organizations in terms of organizational strategies, structures, and communication methods. Issues of human-computer interaction, ethics, privacy, and security are raised to help facilitate a sociopragmatic and constuctivist understanding of IT culture.

Learning Geography Beyond the Traditional Classroom Chew-

Hung Chang,Bing Sheng Wu,Tricia Seow,Kim Irvine,2018-05-08

This book provides a collection of critical pieces that support the idea that good teaching and learning of geography in fieldwork and using technology should consider the dimensions of curriculum design, instructional design and resource provision, as well as assessment for such learning activities. Further, it clearly describes the thinking, experiences and critical comments concerning two broad areas of learning outside the traditional classroom – in the field and with technology.

The Multivariate Normal Distribution Y.L. Tong, 2012-12-06

The multivariate normal distribution has played a predominant role in the historical development of statistical theory, and has made its appearance in various areas of applications. Although many of the results concerning the multivariate normal distribution are classical, there are important new results which have been reported recently in the literature but cannot be found in most books on multivariate analysis. These results are often obtained by showing that the multivariate normal density function belongs to certain large families of density functions. Thus, useful properties of such families immediately hold for the multivariate normal distribution. This book attempts to provide a comprehensive and coherent treatment of the classical and new results related to the multivariate normal distribution. The material is organized in a unified modern approach, and the main themes are dependence, probability inequalities, and their roles in theory and applications. Some general properties of a multivariate normal density function are discussed, and results that follow from these properties are reviewed extensively. The coverage is, to some extent, a matter of taste and is not intended to be exhaustive, thus more attention is focused on a systematic presentation of results rather than on a

complete listing of them.

Bioinformatics Bertil Schmidt, 2010-07-15 New sequencing technologies have broken many experimental barriers to genome scale sequencing, leading to the extraction of huge quantities of sequence data. This expansion of biological databases established the need for new ways to harness and apply the astounding amount of available genomic information and convert it into substantive biological

High Performance Computing in Science and Engineering, Munich 2002 Siegfried Wagner, Werner Hanke, Arndt Bode, Franz Durst, 2012-12-06 High-Performance Computers (HPC) have initiated a revolutionary development in research and technology since many complex and challenging problems in this area can only be solved by HPC and a network in modeling, algorithms and software. In 1998 the Deutsche Forschungsgemeinschaft (German Research Association) recommended to install an additional Federal High Performance Computer followed by the one in Stuttgart. In January 1999 the Wissenschaftsrat (German Science Council) decided that the Leibniz Rechenzentrum (Computing Center) of the Bavarian Academy of Sciences in Munich should run the second Federal High-Performance Computer in Germany. The

investment cost of this Höchstleistungsrechner in Bayern (HLRB) was borne by the Federal Government of Germany and the Free State of Bavaria whereas the operating cost was at the expense of the Bavarian Government only. The operation of the HLRB is organized in combination with the - Leibniz-Rechenzentrum (LRZ) of the Bavarian Academy of Sciences as the operating authority of the HLRB - Steering Committee of the HLRB - Competence Network for Technical/Scientific High-Performance Computing in Bavaria (KONWIHR). In 2000 a Hitachi SR8000-FI was installed. It was the first Teraflops Computer in Germany and reached a peak performance of two Teraflops after an extension at the end of 2001. The goal of HLRB is to provide computer facilities necessary to solve challenging scientific and technological problems that cannot be solved on big servers but require large (storage) high-performance (very fast) computers and efficient software.
