Encyclopedia of Traditional Chinese Medicines - Molecular Structures, Pharmacological Activities, Natural Sources and Applications Jiaju Zhou, Guirong Xie, Xinjian Yan, 2011-02-21 This set of six volumes provides a systematic and standardized description of 23,033 chemical components isolated from 6,926 medicinal plants, collected from 5,535 books/articles published in Chinese and international journals. A chemical structure with stereo-chemistry bonds is provided for each chemical component, in addition to conventional information, such as Chinese and English names, physical and chemical properties. It includes a name list of medicinal plants from which the chemical component was isolated. Furthermore, abundant pharmacological data for nearly 8,000 chemical components are presented, including experimental method, experimental animal, cell type, quantitative data, as well as control compound data. The seven indexes allow for complete cross-indexing. Regardless whether one searches for the molecular formula of a compound, the pharmacological activity of a compound, or the English name of a plant, the information in the book can be retrieved in multiple ways.

Ritual and Mythology of the Chinese Triads Barend ter

Haar,2021-08-30 The extensive ritual and mythological lore of the Chinese Triads form the scope of this new paperback title in Brill's Scholars' List. The author critically evaluates the extant sources and offers a wealth of contextual information. The core of the book is formed by a close reading of the initiation ritual, including the burning of incense, the altar, the enactment of a journey of life and death, and the blood covenant. Different narrative structures

are also presented. These include the messianic demonological paradigm, political legitimation, and the foundation of myth. Triad lore is placed in its own religious and cultural context, allowing radically new conclusions about its origins, meanings and functions. This book is of special interest to social historians, anthropologists, and students of Chinese religious culture.

Faculty Mobility Jin Liu, Alan C.K. Cheung, Fan-sing Hung, 2022-09-30 Adopting curriculum vitae (CV) analysis method, this book collects CVs of university faculty from 109 universities of The Double First Class University Plan in China, and systematically analyses the mobility pattern of faculty in China for the first time. Examining the overall mobility frequency of Chinese faculty and its growing rate, the authors predict that after the epidemic, with the growing number of returned overseas talents, there may be a third wave of faculty mobility. They demonstrate that East Asia, the United States and Europe are the main channels for the inward talent mobility to China, and there are significant differences in China's faculty mobility among different regions, disciplines and genders, which deserves further investigation. Furthermore, they argue the influencing factors of faculty mobility between China

and foreign countries are highly different too. Scholars and students of Chinese higher education, international and comparative education may find this book helpful, and benefit from the analysis framework of Push and Pull Theory as long as CV analysis method.
