**Bertrand Russell and the Nature of Propositions** Samuel Lebens, 2017-05-25 Bertrand Russell and the Nature of Propositions offers the first book-length defence of the Multiple Relation Theory of Judgement (MRTJ). Although the theory was much maligned by Wittgenstein and ultimately rejected by Russell himself, Lebens shows that it provides a rich and insightful way to understand the nature of propositional content. In Part I, Lebens charts the trajectory of Russell's thought before he adopted the MRTJ. Part II reviews the historical story of the theory: What led Russell to deny the existence of propositions altogether? Why did the theory keep evolving throughout its short life? What role did G. F. Stout play in the evolution of the theory? What was Wittgenstein's concern with the theory, and, if we can't know what his concern was exactly, then what are the best contending hypotheses? And why did Russell give the theory up? In Part III, Lebens makes the case that Russell's concerns with the theory weren't worth its rejection. Moreover, he argues that the MRTJ does most of what we could want from an account of propositions at little philosophical cost. This book bridges the history of early analytic philosophy with work in contemporary philosophy of language. It advances a bold reading of the theory of descriptions and offers a new understanding of the role of Stout and the representation concern in the evolution of the MRTJ. It also makes a decisive contribution to philosophy of language by demonstrating the viability of a no-proposition theory of propositions.

**Letters from Home to Wuhan**, 2021-08-25 Letters from Home to Wuhan By: Compiled by Zhao Nianmin, Li Haiyan and Lan Chuanbin; Translated by Sun Hongshan Ever since the People's Republic of China was founded in 1949, the coronavirus disease (COVID-19) is the most serious public health emergency. Then the virus spread rapidly in this country, inspiring terror in people. To ward off a greater calamity, 1,775 doctors and nurses in 12 batches from Shandong went to the epidemic-stricken Hubei at the call of duty. Brave and professionally dedicated, they have completed their work with great success: None of them were infected, none of their patients died, and none of the cured cases turned positive again. At the front line the

1,775 medical workers are armored fighters, but at home they are also sons, daughters, wives, husbands or parents. With a quick change of role, they vent in letters their conflicting feelings of pride and horror, of joys and sorrows, and of affection for family and devotion to duty. So, for this spring, letter has been the most heartwarming, the most acute, the most candid, and the most delicate form to express feelings.

*Industrial and Host Associated Stress Responses in Food Microbes. Implications for Food Technology and Food Safety* Lorena Ruiz, Abram Aertsen, Christophe Nguyen-The, Michael G. Gänzle, Avelino Alvarez-Ordóñez, 2017-10-19 Throughout the food processing chain and after ingestion by the host, food associated bacteria have to cope with a range of stress factors such as thermal and/or non-thermal inactivation treatments, refrigeration temperatures, freeze-drying, high osmolarity, acid pH in the stomach or presence of bile salts in the intestine, that threaten bacterial survival. The accompanying plethora of microbial response and adaptation phenomena elicited by these stresses has important implications for food technology and safety. Indeed, while resistance development of pathogenic and spoilage microorganisms may impose health risks for the consumer and impart great economic losses to food industries, reduced survival of probiotic bacteria may strongly compromise their claimed health benefit attributes. As a result, substantial research efforts have been devoted in the last decades to unravel the mechanisms underlying stress response and resistance development in food associated microorganisms in order to better predict and improve (i) the inactivation of foodborne pathogens and spoilage microorganisms on the one hand and (ii) the robustness and performance of beneficial microorganisms on the other. Moreover, the recent implementation of system-wide omics and (single-)cell biology approaches is greatly boosting our insights into the modes of action underlying microbial inactivation and survival. This Research Topic aims to provide an avenue for dissemination of recent advances within the field of microbial stress response and adaptation, with a particular focus not only on food spoilage and pathogenic microorganisms but also on beneficial microbes in foods.

*Stress Responses of Foodborne Pathogens* Tian Ding, Xinyu Liao, Jinsong Feng, 2022-04-22 Food-borne bacterial pathogens encounter a number of stressors during food processing and preservation. More and more pathogens are able to adapt their physiological properties and/or genetic expression to survive these stressors and pose a risk to food safety and public health. This book provides the reader with a comprehensive overview of common food processing-associated stressors (e.g., heat, cold, acid, osmosis, and oxidation) and deals with the molecular basis of the respective bacterial stress response mechanisms (e.g., viable but nonculturable state, biofilm formation, sporulation, and cross-protection response). Additionally, various chapters cover the response mechanisms of foodborne pathogens to emerging nonthermal sterilisation technologies such as ultrasound, high-pressure processing, pulsed electric fields, ultraviolet light, irradiation and phytochemicals. Through this book we also learn about future prospects for the

efficient control of stress adaption in foodborne pathogens to ensure maximum consumer safety. This book offers a valuable resource for researchers, graduate students, food process engineers and product developers in the fields of food science and microbiology.
