Economic Modeling and Inference Bent Jesper Christensen, Nicholas M. Kiefer, 2009 Economic Modeling and Inference takes econometrics to a new level by demonstrating how to combine modern economic theory with the latest statistical inference methods to get the most out of economic data. This graduate-level textbook draws applications from both microeconomics and macroeconomics, paying special attention to financial and labor economics, with an emphasis throughout on what observations can tell us about stochastic dynamic models of rational optimizing behavior and equilibrium. Bent Jesper Christensen and Nicholas Kiefer show how parameters often thought estimable in applications are not identified even in simple dynamic programming models, and they investigate the roles of extensions, including measurement error, imperfect control, and random utility shocks for inference. When all implications of optimization and equilibrium are imposed in the empirical procedures, the resulting estimation problems are often nonstandard, with the estimators exhibiting nonregular asymptotic behavior such as short-ranked covariance, superconsistency, and non-Gaussianity. Christensen and Kiefer explore these properties in detail, covering areas including job search models of the labor market, asset pricing, option pricing, marketing, and retirement planning. Ideal for researchers and practitioners as well as students, Economic Modeling and Inference uses real-world data to illustrate how to derive the best results using a combination of theory and cutting-edge econometric techniques. Covers identification and estimation of dynamic programming models Treats sources of error--measurement error, random utility, and imperfect control Features financial applications including asset pricing, option pricing, and optimal hedging Describes labor applications including job search, equilibrium search, and retirement Illustrates the wide applicability of the approach using micro, macro, and marketing examples

Speech, Audio, Image and Biomedical Signal Processing using Neural Networks Bhanu Prasad, S.R.M. Prasanna, 2008-01-03 Humans are remarkable in processing speech, audio, image and some biomedical signals. Artificial neural networks are proved to be successful in performing several cognitive, industrial and scientific tasks. This peer reviewed book presents some recent advances and surveys on the applications of artificial neural networks in the areas of speech, audio, image and biomedical signal processing. Its chapters are prepared by some reputed researchers and practitioners around the globe.

Architectures of Hiding Rana Abughannam,Émélie Desrochers-Turgeon,Pallavi

Swaranjali,Federica Goffi,2024-01-31 Architecture manifests as a space of concealment and unconcealment, lethe and alêtheia, enclosure and disclosure, where its making and agency are both hidden and revealed. With an urgency to amplify narratives that are overlooked, silenced and unacknowledged in and by architectural spaces, histories and theories, this book contends the need for a critical study of hiding in the context of architectural processes. It urges the understanding of inherent opportunities, power structures and covert strategies, whether socio-cultural, geo-political, environmental or economic, as they are related to their hideoscapes – the constructed landscapes of our built environments participating in the architectures of hiding. Looking at and beyond the intentions and agency that architects possess, architectural spaces lend themselves as apparatuses for various forms of hiding and un(hiding). The examples explored in this book and the creative works presented in the interviews enclosed in the interludes of this publication cover a broad range of geographic and cultural contexts, discursively disclosing hidden aspects of architectural meaning. The book investigates the imaginative intrigue of concealing and revealing in design processes, along with moral responsibilities and ethical dilemmas inherent in crafting concealment through the making and reception of architecture.

Encaustic Art in the Twenty-First Century Anne Lee,Ashley Rooney,2016 From beehive to hotplate to the artist's hand, encaustic has evolved as a versatile medium applied to almost every artistic style. A long-overdue look at a newly popular art form, this book explores 79 North American artists' feelings about their work in encaustic and how they use it to express their inner worlds and the world around them. Eight chapters organize the artists by geographical region and focus on how the heated beeswax and resin material is used to create seductive, skin-like surfaces and rich, layered

membranes. More than 2,000 years old, this cross-disciplinary medium ranges from painting to sculpture, assemblage, collage, and printmaking and encourages risk-taking in a way that other materials do not. Its inherent contradictions--it can be hot or cold, malleable or solid, opaque or translucent, layered or thin, permanent or fragile--make it all the more fascinating.

2D Materials Paolo Bondavalli, 2022-07-18 The book explains, in an easy way, the difficult to grasp concepts behind 2D exotic material properties for physicists, materials scientists, and engineers. This is a new class of phenomena highlighted in 2D materials with strong implications on physics. Physics, also for complex phenomena, is explained in easy terms that are ideal for newcomers to the field and advanced students alike. Theory and specific examples of materials and their intriguing properties are discussed focusing on the structure property relationships that govern materials science. Applications for each phenomenon are evoked and a roadmapping is performed.

The Arts J. Mills, Colin Ball, 2011-12-22 The Bliss Bibliographic Classification Association is an association of users and supporters of the Bibliographic Classification. The association promotes the development and use of classification, publishes official amendments, enables users to keep in touch and exchange experience, and gives them a say in the future of the scheme. It is a non-profit organization, founded in 1969, with members all over the world. Each of the following schedules is the result of a rigorous and detailed analysis of the terminology of the field in question, using the techniques of facet analysis.

Arno Schmidt's Zettel's Traum: An Analysis (Studies in German Literature, Linguistics, and Culture) Volker Max Langbehn, 2003 Arno Schmidt (1914-1979) is considered one of the most daring and influential writers of postwar Germany; the Germanist Jeremy Adler has called him a giant of postwar German literature. Schmidt was awarded the Fontane Prize in 1964 and the Goethe Prize in 1973, and his early fiction has been translated into English to high critical acclaim, but he is not a well-known figure in the English-speaking world, where his complex work remains at the margins of critical inquiry. Volker Langbehn's book introduces Schmidt to the English-speaking audience, with primary emphasis on his most famous novel, *Zettel's Traum*. One reviewer called the book an elephantine monster because of its unconventional size (folio format), length (1334 pages and over 10 million

characters), and unique presentation of text in the form of notes, typewritten pages, parallel columns, and collages. The novel narrates the life of the main characters, Daniel Pagenstecher, Paul Jacobi and his wife Wilma, and their teenage daughter Franziska. In discussing the life and works of Edgar Allan Poe, the four engage in the problems connected with a translation of Poe. Langbehn's study investigates how literary language can mediate or account for the world of experiences and for concepts. Schmidt's use of unconventional presentation formats challenges us to analyze how we think about reading and writing literary texts. Instead of viewing such texts as a representation of reality, Schmidt's novel destabilizes this unquestioned mode of representation, posing a radical challenge to what contemporary literary criticism defines as literature. No comprehensive study of Zettel's Traum exists in English. Volker Langbehn is assistant professor of German at San Francisco State University.

Advanced Thermoelectrics Zhifeng Ren, Yucheng Lan, Qinyong Zhang, 2017-11-06 This book provides an overview on nanostructured thermoelectric materials and devices, covering fundamental concepts, synthesis techniques, device contacts and stability, and potential applications, especially in waste heat recovery and solar energy conversion. The contents focus on thermoelectric devices made from nanomaterials with high thermoelectric efficiency for use in large scale to generate megawatts electricity. Covers the latest discoveries, methods, technologies in materials, contacts, modules, and systems for thermoelectricity. Addresses practical details of how to improve the efficiency and power output of a generator by optimizing contacts and electrical conductivity. Gives tips on how to realize a realistic and usable device or module with attention to large scale industry synthesis and product development. Prof. Zhifeng Ren is M. D. Anderson Professor in the Department of Physics and the Texas Center for Superconductivity at the University of Houston. Prof. Yucheng Lan is an associate professor in Morgan State University. Prof. Qinyong Zhang is a professor in the Center for Advanced Materials and Energy at Xihua University of China.
