How Plants Work Stephen Blackmore,2018-11 Today's plants are descended from simple algae that first emerged more than 500 million years ago, and now there are around 400,000 species. The huge diversity of forms that these plants take is staggering. From towering redwoods, to diminutive mosses; from plants that developed stinging hairs and poisons, to those that require fire to germinate or ocean currents to distribute their seeds. But how have we arrived at this mind-blowing variety in the plant kingdom? How Plants Work seeks to answer this intriguing question, drawing from a wide range of examples--from the everyday leaf to the most bizarre flowers--this book is a fascinating enquiry into, and celebration of, the rich complexity of plant life.
