Medicon 2016 is the XIV in the series of regional meetings of the International Federation of Medical and Biological Engineering (IFMBE) in the Mediterranean. The goal of Medicon 2016 is to provide updated information on the state of the art on Medical and Biological Engineering and Computing under the main theme "Systems Medicine for the Delivery of Better Healthcare Services". Medical and Biological Engineering and Computing cover complementary disciplines that hold great promise for the advancement of research and development in complex medical and biological systems. Research and development in these areas are impacting the science and technology by advancing fundamental concepts in translational medicine, by helping us understand human physiology and function at multiple levels, by improving tools and techniques for the detection, prevention and treatment of disease. Medicon 2016 provides a common platform for the cross fertilization of ideas, and to help shape knowledge and scientific achievements by bridging complementary disciplines into an interactive and attractive forum under the

special theme of the conference that is Systems Medicine for the Delivery of Better Healthcare Services. The programme consists of some 290 invited and submitted papers on new developments around the Conference theme, presented in 3 plenary sessions, 29 parallel scientific sessions and 12 special sessions.

*A Contribution to the Pure Theory of Taxation* Roger Guesnerie, 1998-11-12 This book investigates the way in which tax systems affect economic efficiency and the distribution of welfare. It examines within a unified framework questions that are usually treated in different areas of the literature: institutional economics, positive economics, normative economics, and political economics. It adheres to the rigorous standards of pure theory while paying careful attention to the policy relevance of the arguments. Tax systems are viewed as information extracting devices that generate sets of equilibria of complex geometry. A tax reform methodology is proposed that sheds light on optimal taxes. Social conflicts in the determination of taxes are shown to have effects on social cohesion.

**Metabolic Risk for Cardiovascular Disease** Robert H. Eckel,2011-07-05 The relationship of metabolic diseases to cardiovascular disease (CVD) is reaching epidemic proportions. This relates mostly to the increasing prevalence of obesity, the metabolic syndrome and type 2 diabetes. This book outlines and addresses the metabolic factors and related diseases that contribute to CVD, including brief introductions to metabolic pathways including lipid and lipoprotein metabolism, macronutrient fuel partitioning, insulin action and body weight regulation. Mechanisms that relate to becoming obese, maintenance of the obese state, the dyslipidemias, and glucose intolerance/diabetes are also addressed, and the importance of interventions that reduce metabolic risk factors and CVD are covered.

**Prediabetes: A Fundamental Text** Samuel Dagogo-Jack,2022-10-26 Prediabetes affects nearly 90 million U.S. adults and more than 374 million people worldwide. But what exactly is prediabetes, and how should it be treated? Individuals with prediabetes have a high risk of progressing to type 2 diabetes. Diabetes currently affects approximately 30 million adults in the U.S. and 463 million people worldwide, and type 2 diabetes represents 90-95% of the diabetes burden. Individuals with prediabetes also face increased risks of developing several complications including heart disease. Intervention at the prediabetes stage can help prevent progression to type 2 diabetes, and even lead to remission of prediabetes and a return to normal blood glucose regulation (NGR). However, a deeper understanding of the pathobiology of prediabetes is critical to the discovery and delivery of programs for preventing of diabetes. Focusing on prediabetes is compelling: Understanding the numerous risk factors that trigger the initial escape from NGR toward prediabetes provides critical information that enables the precise and timely targeting of preventive interventions to at-risk persons. This book is for clinicians, researchers, public health practitioners and policy makers. It begins with an overview of the demographic, anthropometric, biobehavioral and biochemical factors that drive the transition from normal blood glucose to prediabetes. Emerging knowledge from the fields of genomics, transcriptomics, microRNAs, metabolomics and microbiomics is incorporated into a comprehensive treatise on the pathobiology of prediabetes. Next, the focus shifts to

evidence-based management of prediabetes and prevention of type 2 diabetes. Prediabetes seldom remits spontaneously. Lifestyle modification and certain medications can prevent progression from prediabetes to type 2 diabetes and may even induce remission of prediabetes in some people. Landmark diabetes prevention trials are discussed through the prism of their successful translatability in communities around the world. Emphasis is placed on practical adaptations that would enable cost-effective community diabetes prevention initiatives. Interventions utilizing lifestyle modification are prioritized over medications, but novel approaches (including cyclical medication strategy, designer nutraceuticals and metabolic surgery) are also discussed. Current lifestyle intervention protocols have been more effective at preventing progression from prediabetes to type 2 diabetes than they have been at restoring NGR. This book makes the case that reversal of prediabetes and restoration of normal blood glucose levels carries numerous benefits and ought to be the primary goal of intervention in people with prediabetes.

Principles and Practice of Geriatric Sleep Medicine S. R. Pandi-Perumal, Jaime M. Monti, Andrew A. Monjan, 2009-11-26 Sleep disorders cause considerable morbidity and distress in the aging population. By highlighting the clinical diagnosis and management of sleep disorders, this volume provides a valuable resource for all those involved in health care of older individuals. The changes in sleep patterns that occur during normal aging are described, followed by authoritative chapters on the presentation of various age-related sleep disorders. The book deals with the range of therapeutic measures available for managing these disorders and gives insight to potential areas of research that have emerged in the last few years, such as the study of circadian rhythms in later life, sleep patterns associated with co-morbidities and the use of quality-of-life measurement tools to determine sleep quality as we age. This volume is relevant to sleep disorders specialists, psychiatrists, geriatricians and gerontologists, and any professionals and researchers working in the interdisciplinary areas of sleep and aging.

**Diabetes Secondary to Endocrine and Pancreatic Disorders** E. Ghigo, M. Porta, 2014-04-10 The 1997 classification of diabetes mellitus, now accepted worldwide, includes a large section of 'Other specific types of diabetes', a good part of which is made up of diabetes secondary to other endocrine or pancreatic disorders. However, a comprehensive overview on how these disorders may lead to diabetes, and how to diagnose and treat them, was not available so far. Filling this gap, this book includes detailed descriptions of glucose metabolism derangements in other endocrine and pancreatic disorders. Leading experts in their fields present an exhaustive overview of the most-updated evidence on the etiopathological mechanisms underlying the development of diabetes in patients with endocrine and pancreatic disorders, and the relevant diagnostic and therapeutic approaches. Because of its multidisciplinary approach, this book is of great interest to endocrinologists, diabetologists, general practitioners, internal medicine specialists and surgeons, and will remain a reference source for years to come.

**Diabetology of Pregnancy** Josip Djelmić, Gernot Desoye, Marina Ivanisević, 2005-01-01 This book is published with the purpose of providing a comprehensive, but nevertheless concise, overview of the scientific and clinical characteristics/features of gestational diabetes as well as of type 1 and type 2 diabetes mellitus in pregnancy. Conceptual Basis, Formalisations and Parameterization of the Stics Crop Model Nadine Brisson, Marie Launay, Bruno Mary, Nicolas Beaudoin, 2009-01-19 The STICS crop model has been developed since 1996 at INRA in collaboration with other research and technical

institutes. The model synthesizes, illustrates and concretizes an important part of the French agronomic knowledge as a point of view on the field and cropping systems working. The formalisations of the STICS crop model presented in this book can be considered as references used in the framework of crop sciences. The book arrangement relies on the way the model designs the crop-soil system functioning, each chapter being devoted to a set of important functions such as growth initiation, yield onset, water uptake, transformation of organic matter etc. One chapter deals with the cropping system and long term simulations and the final chapter is about the involvement of the user in terms of option choices and parameterization. If this book is mainly intended for scientists who use the STICS model, it can also be useful for agronomists, crop modellers, students and technicians looking for elementary formalizations of the crop-soil system functioning.

**Biocomputing 2017** Russ B Altman, A Keith Dunker, Lawrence Hunter, Marylyn D Ritchie, Tiffany A Murray, Teri E Klein, 2016-11-23 The Pacific Symposium on Biocomputing (PSB) 2017 is an international, multidisciplinary conference for the presentation and discussion of current research in the theory and application of computational methods in problems of biological significance. Presentations are rigorously peer reviewed and are published in an archival proceedings volume. PSB 2017 will be held on January 4 – 8, 2017 in Kohala Coast, Hawaii. Tutorials and workshops will be offered prior to the start of the conference. PSB 2017 will bring together top researchers from the US, the Asian Pacific nations, and around the world to exchange research results and address open issues in all aspects of computational biology. It is a forum for the presentation of work in databases, algorithms, interfaces, visualization, modeling, and other computational methods, as applied to biological problems, with emphasis on applications in data-rich areas of molecular biology. The PSB has been designed to be responsive to the need for critical mass in sub-disciplines within biocomputing. For that reason, it is the only meeting whose sessions are defined dynamically each year in response to specific proposals. PSB sessions are organized by leaders of research in biocomputing's hot topics. In this way, the meeting provides an early forum for serious examination of emerging methods and approaches in this rapidly changing field.
