He comes home from a late party and on switching his hall light on is involved in massive gas explosion. He suddenly finds himself in a strange medical room surrounded by high technological equipment. This book will definitely be required reading for any of our future Android engineers.” –Cameron Banga, Cofounder, 9magnets, LLC There’s a downside to Android’s amazing openness and versatility: it’s easy for developers to write code that’s inefficient, unreliable, insecure, or hard to maintain. In Android Development Patterns, enterprise Android developer Phil Dutson helps you leverage Android 5.0+’s amazing power without falling victim to those pitfalls. Dutson presents today’s most comprehensive set of patterns and procedures for building optimized, robust apps with Android 5.0+. Then, he walks through the modern best practices for structuring apps, using widgets and components, and working with views. You learn how to build apps that are easy to manage and update, deliver accurate and up-to-date information without wasting precious battery power, and take advantage of new hardware, such as Android Wear and Android TV. Dutson concludes by presenting powerful strategies for optimizing your apps and packaging them for distribution. Coverage includes Using testing to build more trustworthy, dependable, maintainable apps Understanding subtle but critical differences between Android and traditional Java programming Building consistent, modern user interfaces with views and layouts Leveraging the proven MVC pattern to cleanly organize logic Creating rich visual experiences with 3D graphics, animation, and media Simplifying capture and use of location data with the new Locations API Integrating optional hardware, such as Bluetooth, NFC, or USB Building better apps with Google Play Services Creating Android Wear notifications and apps Tuning and improving apps with Google Analytics Designing Android TV apps for the “ten foot view” informit.com/aw | <https://github.com/dutsonpa/adp-files>

Beginning Android Tablet Programming Robbie Matthews, 2012-02-01 Beginning Android Tablet Programming starts off by showing how to get your system ready for Android tablet programming. You won't need any previous Android

experience, because you'll learn all about the basic structure of an Android program and how the Android operating system works—and then you'll learn how to write your first Android tablet application from scratch! Beginning Android Tablet Programming then equips you to build a set of interesting and fully-working Android tablet applications. These projects will give you the inspiration and insights to build your own Android programs in the future. You'll be introduced to 2D programming, and you'll see what you can do with a touch screen interface and the Honeycomb SDK. Of course, 3D programming is even more alluring for many programmers. If that includes you, you'll learn about how Honeycomb has changed the game for Android graphics programming, and get your first taste of 3D programming on an Android tablet. Lights, camera, action! You'll learn along the way how Android Honeycomb gives you access, through your programming, to all those interesting sensors that tablet computers are equipped with today—beyond the touch screen itself. You'll learn, for example, how you to use a tablet GPS sensor to locate your car! You'll also discover how you can access files on your tablet—or on the web—through programming, and then build on that insight to create your own file browser application. This Android project contains many useful coding techniques appropriate for many situations you might encounter in your future programming Android tablet applications; you'll be glad to have them under your belt. So do you want to write programs that can receive and send reminder messages via SMS? Do you want to write your first 2D or 3D game on Android? Perhaps you'd like to write an application that sorts out all your contacts for you! Beginning Android Tablet Programming introduces you to Android tablet programming, and shows how you can program your Android tablet from scratch to do what you want!
