Ermeni portreleri Hüdavendigâr Onur,1999 Armenians; Turkey; biography.

A Concise History of the Armenian People George A. Bournoutian,2002 The first part of the study discusses the origins of the Armenians, the Urartian Kingdom, Armenia and the Achaemenid, Seleucid, Parthian, Roman, Sasanid and Byzantine periods. It also examines Christianity in Armenia and the development of an alphabet and literature. The work then continues with the history of Armenia during the Arab, Turkish and Mongol periods. A separate chapter deals with the history of Cilician Armenia and the Crusades. The second part concentrates on the Armenian communities in the Ottoman, Persian, Indian, and Russian empires (1500-1918). It also details the Armenian diaspora in Eastern and Western Europe, Africa, the Arab World, the Far East, and the Americas. The study concludes with lengthy chapters on the history of the three Armenian republics (1918-1920); (1921-1991 Soviet Armenia); and the current Armenian republic (1991-2001)

Marwan Ibn Muhammad Daniel Clement Dennett,1939

American Men & Women of Science ,2008

Treasures from the Ark Vrej Nersessian,2001-06-21 Armenia was the first country to recognize Christianity as the official state religion in 301 AD, twelve years before Constantine's decree granting tolerance to Christianity within the Roman Empire. Ever since, Armenia has claimed the privilege of being the first Christian nation, and the wealth of Christian art produced in Armenia since then is testimony to the fundamental importance of the Christian faith to the Armenian people. This extensive new survey of

Armenian Christian art, published to accompany a major exhibition at The British Library, celebrates the Christian art tradition in Armenia during the last 1700 years. The extraordinary quality and range of Armenian art which is documented includes sculpture, metalwork, textiles, ceramics, wood carvings and illuminated manuscripts and has been drawn together from collections throughout the world—many of the examples have never before been seen outside Armenia. In his authoritative text, Dr. Vrej Nersessian, Curator at The British Library, charts the development of Christianity in Armenia. This fascinating history is essential to an understanding of the art and religious tradition of Armenia, a country in which the sense of the sacred extends well beyond the purely religious, infiltrating the entire fabric of Armenian affairs to create a fascinating culture. This sumptuously illustrated book will be of immense value to anyone with an interest in Byzantine art and culture, the history of Christianity and the history of Armenia and the Middle Orient.

Research Developments in Geotechnics, Geo-Informatics and Remote Sensing Hesham El-Askary,Zeynal Abiddin Erguler,Murat Karakus,Helder I. Chaminé,2022-02-21 This book contains the best peer-reviewed papers accepted for presentation at the 2nd Springer Conference of the Arabian Journal of Geosciences (CAJG-2), organized in Sousse, Tunisia, in November 2019. The short papers cover various topics from the fields of (1) geological and geotechnical engineering, (2) geomechanical studies based on numerical and analytical methods, and (3) geo-informatics and remote sensing. The content of these papers provides new scientific knowledge for further understanding on landslides, new

stabilization techniques, importance of geophysics for engineering geology investigations as well as new empirical approaches for easily predicting some physical and hydrogeomechanical properties of geomaterials. The book is of interest to all researchers, practitioners, and students in the fields of geological and mining engineering, geotechnical engineering, hydrogeomechanics, engineering geology, geotechnologies, and natural hazards.

Machine Learning and Data Mining in Aerospace Technology Aboul Ella Hassanien, Ashraf Darwish, Hesham El-Askary, 2019-07-02 This book explores the main concepts, algorithms, and techniques of Machine Learning and data mining for aerospace technology. Satellites are the ‘eagle eyes’ that allow us to view massive areas of the Earth simultaneously, and can gather more data, more quickly, than tools on the ground. Consequently, the development of intelligent health monitoring systems for artificial satellites – which can determine satellites’ current status and predict their failure based on telemetry data – is one of the most important current issues in aerospace engineering. This book is divided into three parts, the first of which discusses central problems in the health monitoring of artificial satellites, including tensor-based anomaly detection for satellite telemetry data and machine learning in satellite monitoring, as well as the design, implementation, and validation of satellite simulators. The second part addresses telemetry data analytics and mining problems, while the last part focuses on security issues in telemetry data.

Advances in Remote Sensing and Geo Informatics Applications Hesham M. El-Askary, Saro Lee, Essam Heggy, Biswajeet Pradhan, 2018-12-29 This edited volume is based

on the best papers accepted for presentation during the 1st Springer Conference of the Arabian Journal of Geosciences (CAJG-1), Tunisia 2018. The book compiles a wide range of topics addressing various issues by experienced researchers mainly from research institutes in the Mediterranean, MENA region, North America and Asia. Remote sensing observations can close gaps in information scarcity by complementing ground-based sparse data. Spatial, spectral, temporal and radiometric characteristics of satellites sensors are most suitable for features identification. The local to global nature and broad spatial scale of remote sensing with the wide range of spectral coverage are essential characteristics, which make satellites an ideal platform for mapping, observation, monitoring, assessing and providing necessary mitigation measures and control for different related Earth's systems processes. Main topics in this book include: Geo-informatics Applications, Land Use / Land Cover Mapping and Change Detection, Emerging Remote Sensing Applications, Rock Formations / Soil Lithology Mapping, Vegetation Mapping Impact and Assessment, Natural Hazards Mapping and Assessment, Ground Water Mapping and Assessment, Coastal Management of Marine Environment and Atmospheric Sensing.

CNC LATHE G-CODE and M-CODE ILLUSTRATIVE HANDBOOK Patrick Talverdi, 2010-10 This handbook is a practical source to help the reader understand the G-codes and M-codes in CNC lathe programming. It covers CNC lathe programming codes for everyday use by related industrial users such as managers, supervisors, engineers, machinists, or even college students. The codes have been arranged in some logical ways started with the code number, code name, group number, quick description, command

format, notes and some examples. Moreover, the reader will find five complementary examples and plenty of helpful tables in appendix.

Adaptive User Support Reinhard Oppermann, 2017-12-06 The potential of software applications to solve an array of office and administrative problems is increasing faster than the ability of users to exploit it. We need to make systems easier to learn and more comfortable to use. This book reports a major advance in the effort to accomplish both goals. Flexcel enables users to modify access and dialog dynamics to their specific requirements. Relying on a plan recognition feature, the system proposes adaptations or uses of adaptations. The ongoing conflict between the adaptive and the adaptable is resolved in an integration: user and system share the responsibility for the initiatives, decision-making and execution. A critic component of the system then analyzes the user's handling of the adaptation tools and suggests improvements. The system offers an environment in which users can explore as they learn. HyPlan implements the context-sensitive help that facilitates learning on demand. When the PLANET plan-recognition feature identifies the kinds of support for work that may possibly be required, HyPlan provides, on request, specific assistance in the form of hypermedia or animated displays and tutorials. Developmental research has shown that users take advantage of opportunities to adapt interfaces only in conjunction with help-functions -- which are accepted when they do not interrupt work. And studies by social scientists have shown that adaptations of technical systems have to be integrated into the overall process of organizational innovation and undertaken cooperatively. This book will stimulate all those concerned with software -- from computational, cognitive, ergonomic, or organizational

standpoints -- to reconceive the relationship between design and user support.

Ancient West and East Gocha Tsetskhladze, 2004 Annotation. Building Resilience to Climate Change in South Caucasus Agriculture Nicolas Ahouissoussi, James E. Neumann, Jitendra P. Srivastava, 2014-05-06 This book illustrates the World Bank's commitment to assist countries to respond to the opportunities and challenges posed by climate change. Undertaken in collaborative partnership with policy makers, farmers, civil society, and other stakeholders in Armenia, Azerbaijan and Georgia, it provides a much needed response to the call for action by quantifying the impact and identifying key priorities for policies, programs, and investments to reduce the vulnerability of agricultural systems to climate change in the South Caucasus. The study responds to the urgent need for climate adaptation, as highlighted in the World Bank's "Turn Down the Heat" report. Notably, the South Caucasus is already contending with increasing aridity and more frequent extreme weather events (e.g. severe droughts, floods and hailstorms). It presents practical solutions for a more climate smart agriculture, at the regional, national and agro-ecological zone level in each country. The recommendations offered in this book are a compilation of the results of the three national studies, and highlight the need and potential for regional collaborative action to increase benefits, while also continuing to emphasize the need for an effective response at the national level. The national level results are supported by country reports, which provide more details.

This work is but an important beginning. To achieve the goals of climate resilience in the agriculture sector, more work is needed to translate the proposals into reality. The analysis demonstrates that investments in irrigation infrastructure and on-farm technologies have great potential to raise agricultural productivity and improve the climate resilience of the sector. Demand-side agricultural water management will have high short-term payoffs, and these short-term payoffs are complementary to the success of long-term irrigation, drainage and other infrastructure investments. Strengthening the disaster risk management strategies (beyond agricultural measures) are also needed to help mitigate household risks from extreme events, especially for the poorest, who are the most vulnerable.

Multiple Attribute Decision Making Gwo-Hshiung Tzeng, Jih-Jeng

Huang, 2011-06-22 Decision makers are often faced with several conflicting alternatives. How do they evaluate trade-offs when there are more than three criteria? To help people make optimal decisions, scholars in the discipline of multiple criteria decision making (MCDM) continue to develop new methods for structuring preferences and determining the correct relative weights for criteria. A compilation of modern decision-making techniques, *Multiple Attribute Decision Making: Methods and Applications* focuses on the fuzzy set approach to multiple attribute decision making (MADM). Drawing on their experience, the authors bring together current methods and real-life applications of MADM techniques for decision analysis. They also propose a novel hybrid MADM model that combines DEMATEL and analytic network process (ANP) with VIKOR procedures. The first part of the book focuses on the theory of each method and includes examples that can

be calculated without a computer, providing a complete understanding of the procedures. Methods include the analytic hierarchy process (AHP), ANP, simple additive weighting method, ELECTRE, PROMETHEE, the gray relational model, fuzzy integral technique, rough sets, and the structural model. Integrating theory and practice, the second part of the book illustrates how methods can be used to solve real-world MADM problems. Applications covered in the book include: AHP to select planning and design services for a construction project TOPSIS and VIKOR to evaluate the best alternative-fuel vehicles for urban areas ELECTRE to solve network design problems in urban transportation planning PROMETEE to set priorities for the development of new energy systems, from solar thermal to hydrogen energy Fuzzy integrals to evaluate enterprise intranet web sites Rough sets to make decisions in insurance marketing Helping readers understand how to apply MADM techniques to their decision making, this book is suitable for undergraduate and graduate students as well as practitioners.

Building Urban Resilience Abhas K. Jha, Todd W. Miner, Zuzana Stanton-Geddes, 2013-03-01 This handbook is a resource for enhancing disaster resilience in urban areas. It summarizes the guiding principles, tools, and practices in key economic sectors that can facilitate incorporation of resilience concepts into decisions about infrastructure investments and urban management that are integral to reducing disaster and climate risks.

Debating Humanitarian Intervention Fernando R. Tesón, Bas van der Vossen, 2017-10-03 When foreign powers attack civilians, other countries face an

impossible dilemma. Two courses of action emerge: either to retaliate against an abusive government on behalf of its victims, or to remain spectators. Either course offers its own perils: the former, lost lives and resources without certainty of restoring peace or preventing worse problems from proliferating; the latter, cold spectatorship that leaves a country at the mercy of corrupt rulers or to revolution. Philosophers Fernando Tesón and Bas van der Vossen offer contrasting views of humanitarian intervention, defining it as either war aimed at ending tyranny, or as violence. The authors employ the tools of impartial modern analytic philosophy, particularly just war theory, to substantiate their claims. According to Tesón, a humanitarian intervention has the same just cause as a justified revolution: ending tyranny. He analyzes the different kinds of just cause and whether or not an intervener may pursue other justified causes. For Tesón, the permissibility of humanitarian intervention is almost exclusively determined by the rules of proportionality. Bas van der Vossen, by contrast, holds that military intervention is morally impermissible in almost all cases. Justified interventions, Van der Vossen argues, must have high ex ante chance of success. Analyzing the history and prospects of intervention shows that they almost never do. Tesón and van der Vossen refer to concrete cases, and weigh the consequences of continued or future intervention in Syria, Somalia, Rwanda, Bosnia, Iraq, Libya and Egypt. By placing two philosophers in dialogue, *Debating Humanitarian Intervention* is not constrained by a single, unifying solution to the exclusion of all others. Rather, it considers many conceivable actions as judged by analytic philosophy, leaving the reader equipped to make her own, informed judgments.

Higher Education and the Common Good Simon Marginson, 2016-12-19 In the last half century higher education has moved from the fringe to the centre of society and accumulated a long list of social functions. In the English-speaking world, Europe and much of East Asia more than two thirds of all school students enter tertiary education. Bulging at the seams, universities are fountains of new knowledge, engines of prosperity and innovation, drivers of regional growth, skilled migration and global competitiveness, and makers of equality of opportunity. Yet they can do little to stop growing income inequality, and in the English-speaking countries, government rhetoric and policy economics have narrowed their purpose to that of sorting careers for the middle class, partly to justify the rise in tuition fees. Higher education systems have become more competitive and stratified, with value more concentrated at the top, and the collective

public benefits of universities are underplayed and underfunded. In short, governments expect both too much and too little of higher education, and its contribution to the common good is being eroded. Yet universities are much much more than factories for graduate earnings. Higher Education and the Common Good argues that this sector has a key role in rebuilding social solidarity and mobility in fractured societies.
