Pepouza and Tymion William Tabbernee, Peter Lampe, 2008-09-25 Early Christianity varied in appearance as much as the geography and terrain of the ancient Middle East. Often variety became pitted against orthodoxy. Montanism, or the New Prophecy, was founded by a Phrygian named Montanus along with two ecstatic prophetesses, Maximilla and Priscilla. Even the North African Church Father Tertullian was a supporter of the New Prophecy movement. The Montanist variety of Christianity, however, soon fell into disfavor by those later deemed orthodox, also because women played an influential role in this movement. Today we know about Montanism only partially and that mainly from the writings of its Christian rivals. One tenet of Montanism was the belief that the New Jerusalem would descend from heaven at a remote location in Phrygia near Tymion and Pepouza, Montanism's most holy city. In 2000, an international team of archaeologists and historians discovered in the Ulubey Canyon the centuries-lost site of Pepouza as well as an inscription mentioning Tymion. The discovery team was led by William Tabbernee (Phillips Theological Seminary, Tulsa, USA). Peter Lampe (University of Heidelberg, Germany) designed and directed the archaeological field campaigns held in the following years, in the course of which Tymion (at Sükraniye) and other settlements were discovered. Compelling archaeological, epigraphic, and historical evidence is recorded in this extraordinary volume. The chapters are in English, German, and Turkish and contain illustrations, maps, photographs, an extensive bibliography, and an index.

Field Measurements in Geomechanics F. Myrvoll, 2003-01-01 A broad cross-section of papers from the 6th International Symposium FMGM in Oslo September 2003 detailing the latest developments in geomechanical field measurement technology and methods. Taking in a wide range of real-world applications from tunnels to off-shore structures, these papers look at both theoretical and practical aspects of the subject and assess performances in the field, providing a wealth of knowledge for professionals and researchers interested in field measurements, soil and granular mechanics, engineering, geology or construction.

Geodesy on the Move Rene Forsberg, Martine Feissl, Reinhard Dietrich, 2012-12-06 Based on the IAG scientific assembly in Rio de Janeiro, Brazil, this volume combines papers in the fields of gravity and geoid, geodynamics, and geodesy in Antarctica. The volume contains papers on recent progress in absolute and relative gravimetry, on models of the global gravity field, theoretical developments in physical geodesy, and many examples of regional gravity field and geoid models. Geodynamics chapters include papers on earth rotation and geopotential variations, reference frames and global deformations, as well as a section on the combination of space and terrestrial methods

for deformation observations. The current status of geodesy in Antarctica is illustrated by a number of papers.

Kinematic Systems in Geodesy, Surveying, and Remote Sensing Klaus-Peter Schwarz, Gerard Lachapelle, 2012-12-06 Kinematic Systems in Geodesy, Surveying, and Remote Sensing provides a state-of-the-art discussion on the use of the Global Positioning System (GPS) in combination with Inertial Navigation Systems (INS) for detailed sensing of the Earth's surface. Divided into two parts, the book first discusses GPS/INS with respect to theory and modelling, equipment trends, estimation methods and quality control, algorithms, and software trends. It then describes the applications of these kinematic systems to positioning and navigation, modelling and measurement of gravity, gravity gradiometry, and altitude. This collection of 63 presentations documents the symposium of the same name held in Banff, Alberta, September 1990. It is the sixth volume of the International Association of Geodesy Symposia series published by Springer-Verlag New York.

Geodesy Beyond 2000 Klaus-Peter Schwarz, 2012-12-06 In this volume, the state of the art in geodesy is presented with special emphasis on the challenges of the next decade. It is subdivided into six parts. The first five parts discuss the challenges of providing a stable global reference at the parts per billion level by space methods, the impact of recently approved dedicated satellite missions on the determination of a high resolution global gravity field and its refinements by airborne gravity, advances in geodynamics and their impact on the monitoring of seismic hazards and earthquake prediction, the increasing use of GPS and INS in kinematic mode for mapping the Earth's surface and monitoring the behaviour of large man-made structures, and the related advances in mathematical theory and numerical techniques. The last part is dedicated to the discussion of a new structure for IAG to meet these challenges.
