An Asimov Companion Donald E. Palumbo, 2016-04-21 A prolific author, Isaac Asimov is most admired for his science fiction, including his collection of short stories *I, Robot* and his *Robot*, *Empire* and *Foundation* series novels. While each of these narratives takes place in a different fictional universe, Asimov asserted at the end of his career that he had, with his last *Robot* and *Foundation* novels, unified them into one coherent metaseries. This reference work identifies and describes all of the characters, locales, artifacts, concepts and institutions in Asimov's metaseries. Mimicking the style of *The Encyclopedia Galactica*, the fictional compendium of all human knowledge that features prominently in the *Foundation* series, this encyclopedia is an invaluable companion to Asimov's science fiction oeuvre.

Foundation D. G. Leahy, 1996-01-01 This book presents the ontological and logical foundation of a new form of thinking, the beginning of an "absolute phenomenology." It does so in the context of the history of thought in Europe and America. It explores the ramifications of a categorically new logic. Thinkers dealt with include Plato, Galileo, Hegel, Kierkegaard, Marx, Nietzsche, Husserl, Heidegger, Peirce, James, Dewey, Derrida, McDermott, and Altizer.

Intelligent Agents for Telecommunications Applications Sahin Albayrak, 1998

Intelligent agent and distributed AI (DAI) approaches attach specific conditions to cooperative exchanges between intelligent systems, that go far beyond simple functional interoperability. Ideally, systems that pursue local or global goals, coordinate their actions, share knowledge, and resolve conflicts during their interactions within groups of similar or dissimilar agents can be viewed as cooperative coarse-grained systems. The infrastructure of telecommunications is a world in transition. There are a number of trends that contribute to this: convergence of traditional telephony and data network worlds, blurring of boundaries between public and private networks, complementary evolution of wireline, wireless, and cable network infrastructures, the emergence of integrated broadband multimedia networks and, of course, the information superhighway. Up to now, despite the effort that has gone into this area, the field of intelligent agents research has not yet led to many fielded systems. Telecommunications applications pose strong requirements to agents such as: reliability, real-time performance, openness, security management and other integrated management, and mobility. In order to fulfil their promise, intelligent agents need to be fully dependable and typically require an integrated set of capabilities. This is the challenge that exists for intelligent agents technology in this application domain.

Oxidative Stress and Redox Signalling in Parkinsons Disease Rodrigo

Franco,Jonathan A Doorn,Jean-Christophe Rochet,2017-07-21 Parkinson's Disease is the second most common neurodegenerative disorder affecting millions of people worldwide. In order to find neuroprotective strategies, a clear understanding of the mechanisms involved in the dopaminergic death of cells that progresses the disease is needed. Oxidative stress can be defined as an imbalance between the production of reactive species and the ability to detoxify them and their intermediates or by-products. Oxidative damage to lipids, proteins, and DNA has been detected in autopsies from individuals with Parkinson's Disease and so links can be made between oxidative stress and Parkinson's Disease pathogenesis. This book provides a thorough review of the mechanisms by which oxidative stress and redox signalling mediate Parkinson's Disease. Opening chapters bring readers up to speed on basic knowledge regarding oxidative stress and redox signalling, Parkinson's Disease, and neurodegeneration before the latest advances in this field are explored in detail. Topics covered in the following chapters include the role of mitochondria, dopamine metabolism, metal homeostasis, inflammation, DNA-damage and thiol-signalling. The role of genetics and gene-environment interactions are also explored before final chapters discuss the identification of potential biomarkers for diagnosis and disease progression and the future of redox/antioxidant based therapeutics. Written by recognized experts in the field, this book will be a valuable source of information for postgraduate students and academics, clinicians, toxicologists and risk

assessment groups. Importantly, it presents the current research that might later lead to redox or antioxidant – based therapeutics for Parkinson's disease.

Interoperating Geographic Information Systems Michael Goodchild,Max J.
Egenhofer,Robin Fegeas,Cliff Kottman,1999-02-28 Geographic information
systems have developed rapidly in the past decade, and are now a major class
of software, with applications that include infrastructure maintenance,
resource management, agriculture, Earth science, and planning. But a lack of

standards has led to a general inability for one GIS to interoperate with another. It is difficult for one GIS to share data with another, or for people trained on one system to adapt easily to the commands and user interface of another. Failure to interoperate is a problem at many levels, ranging from the purely technical to the semantic and the institutional. Interoperating Geographic Information Systems is about efforts to improve the ability of GISs to interoperate, and has been assembled through a collaboration between academic researchers and the software vendor community under the auspices of the US National Center for Geographic Information and Analysis and the Open GIS Consortium Inc. It includes chapters on the basic principles and the various conceptual frameworks that the research community has developed to think about the problem. Other chapters review a wide range of applications and the experiences of the authors in trying to achieve interoperability at a practical level. Interoperability opens enormous potential for new ways of using GIS and new mechanisms for exchanging data, and these are covered in chapters on information marketplaces, with special reference to geographic information. Institutional arrangements are also likely to be profoundly affected by the trend towards interoperable systems, and nowhere is the impact of interoperability more likely to cause fundamental change than in education, as educators address the needs of a new generation of GIS users with access to a new generation of tools. The book concludes with a series of chapters on education and institutional change.

Interoperating Geographic Information Systems is suitable as a secondary text for graduate level courses in computer science, geography, spatial databases, and interoperability and as a reference for researchers and practitioners in industry, commerce and government.
