**Neurology and Pregnancy** Michael S. Marsh, Lina Nashef, Peter Brex, 2012-03-23 Pregnancy complicated by neurological disorders is a challenging area for both obstetricians and neurologists. Treatment of the maternal condition often needs to be adjusted because of concerns for the fetus, and some conditions have a major impact on the method, mode, and timing of delivery. Many of the clinical problems that arise in pregnant women with a neurological disease have not been the subject of clinical trials, so management must often be based on what published evidence is available and a good understanding of the likely interactions between the condition and pregnancy and vice versa. The editors and contributors represent a team with considerable experience in this area. They offer their best practice advice as how to treat the mother effectively, ensuring fetal safety, as well as embracing a philosophy that the pregnancy of a woman with a neurological disease should be made as enjoyable and rewarding for her as is possible.

**How Tobacco Smoke Causes Disease** ,2010 This report considers the biological and behavioral mechanisms that may underlie the pathogenicity of tobacco smoke. Many Surgeon General's reports have considered research findings on mechanisms in assessing the biological plausibility of associations observed in epidemiologic studies. Mechanisms of disease are important because they may provide plausibility, which is one of the guideline criteria for assessing evidence on causation. This report specifically reviews the evidence on the potential mechanisms by which smoking causes diseases and considers whether a mechanism is likely to be operative in the production of human disease by tobacco smoke. This evidence is relevant to understanding how smoking causes disease, to identifying those who may be particularly susceptible, and to assessing the potential risks of tobacco products.
