Interactive Problem Solving Using Logo Heinz-Dieter Boecker, Hal Eden, Gerhard Fischer, 2014-05-22 This book is unique in that its stress is not on the mastery of a programming language, but on the importance and value of interactive problem solving. The authors focus on several specific interest worlds: mathematics, computer science, artificial intelligence, linguistics, and games; however, their approach can serve as a model that may be applied easily to other fields as well. Those who are interested in symbolic computing will find that Interactive Problem Solving Using LOGO provides a gentle introduction from which one may move on to other, more advanced computational frameworks or more formal analysis. What is of primary importance, however, is the text's ability -- through its presentation of rich, open-ended problems -- to effectively cultivate crucial cognitive skills.

**Interactive Technology and the New Paradigm for Healthcare** Richard M. Satava, Karen Morgan, Hans B. Sieburg, 1995 This work contains the state-of-the-art in Virtual Reality as applied to Medicine. Interactive technology, used in many research and development programs, can be applied to health care by involving: robotics, computer vision, simulation, artificial intelligence, image manipulation and storage, data gloves, man-machine interfaces, etc. The Health Telematics Application Program, for example, is advancing virtual reality and enabling technologies (simulation, visualization and robotics) in health care services for patients, the elderly and persons with disabilities. This book addresses the following items from the end-user's perspective: technology transfer, telerobotics, telemedicine, education and training, and virtual reality. 'the book would (...) be useful for those researching interactive technologies in health care, especially virtual reality (...). It would be also of interest to people who want to keep abreast of the latest developments in techno-medical research.' - Rod Elford, Telemedicine Centre, Memorial University St John's, Newfoundland, Canada Journal of Telemedicine and Telecare, volume 2, no. 3, 1996, p. 178 Covered by Current Contents, Life Sciences (ISI), volume 38, no. 34, August 1995, p. 11-13

**Building Interactive Worlds in 3D** Jean-Marc Gauthier, 2013-05-02 In Building Interactive Worlds in 3D readers will find turnkey tutorials that detail all the steps required to build simulations and interactions, utilize virtual cameras, virtual actors (with self-determined behaviors), and real-time physics including gravity, collision, and topography. With the free software demos included, 3D artists and developers can learn to build a fully functioning prototype. The book is dynamic enough to give both those with a programming background as well as those who are just getting their feet wet challenging and engaging tutorials in virtual set design, using Virtools. Other software discussed is: Lightwave, and Maya. The book is constructed so that, depending on your project and design needs, you can read the text or interviews independently and/or use the book as reference for individual tutorials on a project-by-project basis. Each tutorial is followed by a short interview with a 3D graphics professional in order to provide insight and additional advice on particular interactive 3D techniques-from user, designer, artist, and producer perspectives.

**MontiArc - Architectural Modeling and Simulation of Interactive Distributed Systems** Arne Haber, 2016-09-02 Formal ADLs offer great potential to analyse the architecture of a system, predict the overall performance by using simulations, and allow to automatically generate parts of the implementation. Nevertheless, ADLs are rather not used in industrial practice since several problems hinder to exploit their potential to the full extend. This thesis elaborates the design of an ADL that copes with these impediments of ADLs in practice. Therefore, the design of a lightweight ADL is derived which also provides well defined extension points to be adapted to a certain domain or development process. Furthermore, it is investigated how architectural modeling can be enriched with agile development methods to support incremental modeling and the validation of system architectures. Therefore, a set detailed of requirements for architectural modeling and the simulation of system architectures is defined and MontiArc, a concrete ADL to model logical architectures of distributed, interactive systems, is derived. The language is based on the mathematical FOCUS [BS01] framework, which allows to simulate modeled systems in an event-based style. Code generators and a simulation framework provide means to continuously refine and test architectural models. To add new features or adapt the language to a new domain, a corresponding language extension method is presented to extend the syntax, language processing tools, and code generators of the ADL. A lightweight model library concept is presented which allows to develop and reuse component models and their implementation in a controlled and transparent way. The developed language, the simulator, and the language extension techniques have been examined in several case studies which either used or extended MontiArc.

**The Handbook of International Direct Marketing**, 1999 Although direct mail is the fastest growing marketing medium in the world, it is still largely organized on a national basis and remains confined by borders. To support and inform marketing professionals in the development of direct marketing into an international activity, the fourth edition of this title offers a comprehensive 'one-stop' guide to the direct mail potential of every major export market in the world. It provides authoritative, independent advice on how to formulate and execute effective campaigns, along with detailed information on markets, costs and data relevant to businesses based in any country.

*Summary of On-line Or Interactive Physico-chemical Numerical Data Systems* Joseph Hilsenrath, 1980

*Physically Based Real-Time Auralization of Interactive Virtual Environments* Dirk Schröder, 2011 Analogous to visualization, the auralization of virtual environments describes the simulation of sound propagation inside enclosures where methods of Geometrical Acoustics are mostly applied for a high-quality synthesis of aural stimuli that go along with a certain realistic behavior. In the course of this thesis, the design and implementation of the real-time room acoustics simulation software RAVEN will be described, which is a vital part of the implemented 3D sound-rendering system of RWTH Aachen University's immersive Virtual Reality system. RAVEN relies on present-day knowledge of room acoustical simulation techniques and enables a physically accurate auralization of sound propagation in complex environments including important wave effects such as sound scattering, airborne sound insulation between rooms and sound diffraction. Despite this realistic sound field rendering, not only spatially distributed and freely movable sound sources and receivers are supported at runtime but also modifications and manipulations of the environment itself. All major features are evaluated by investigating both the overall accuracy of the room acoustics simulation and the performance of implemented algorithms, and

possibilities for further simulation optimizations are identified by assessing empirical studies of subjects operating in immersive environments

*Interactive Approaches to Video Lecture Assessment* Korbinian Riedhammer, 2012-09-30 A growing number of universities and other educational institutions record videos of regularly scheduled classes and lectures to provide students with additional resources for their study. However, the video alone is not necessarily the same than a carefully prepared educational video. The main issue is that they are typically not post-processed in an editorial sense. That is, the videos often contain longer periods of silence or inactivity, unnecessary repetitions, spontaneous interaction with students, or even corrections of prior false statements or mistakes. Furthermore, there is often no summary or table of contents of the video, unlike with educational videos that supplement a certain curriculum and are well scripted and edited. Thus, the plain recording of a lecture is a good start but far from a good e-learning resource. This thesis describes a system that can close the gap between a plain video recording and useful e-learning resource by producing automatic summaries and providing an interactive lecture browser that can visualize automatically extracted key phrases and their importance on an augmented time line. The lecture browser depends on four tasks: automatic speech recognition, automatic extraction and ranking of key phrases, extractive speech summarization, and the visualization of the phrases and their salience. These tasks as well as the contribution to the state of the art are described in detail and evaluated on a newly acquired corpus of academic spoken English, the LMElectures. A first user study shows that students using the lecture browser can solve a topic localization task about 29 % faster than students that are provided with the video only.

*Nanomaterials and Their Interactive Behavior with Biomolecules, Cells and Tissues* Yogendrakumar H. Lahir, Pramod Avti, 2020-08-04 Nanoscience is a multidisciplinary area of science which enables researchers to create tools that help in understanding the mechanisms related to the interactions between nanomaterials and biomolecules (nanotechnology). Nanomaterials represent nanotechnology products. These products have

an enormous impact on technical industries and the quality of human life. Nanomaterials directly or indirectly have to interact with biosystems. It is, therefore, essential to understand the beneficial and harmful interactions of nanomaterials with and within a biosystem, especially with reference to humans. This book provides primary and advanced information concerning the interactions between nanomaterials and the components of a typical biosystem to readers. Chapters in the book cover, in a topic-based approach, the many facets of nanomolecular interactions with biological molecules and systems that influence their behavior, bioavailability and biocompatibility (including nucleic acids, cell membranes, tissues, enzymes and antibodies). A note on the applications of nanomaterials is also presented in the conclusion of the book to illustrate the usefulness of this class of materials. The contents of the book will benefit students, researchers, and technicians involved in the fields of biological sciences, such as cell biology, medicine, molecular biology, food technology, cosmetology, pharmacology, biotechnology, and environmental sciences. The book also provides information for the material science personnel, enabling them to understand the basics of target-oriented nanomaterials design for specific objectives.
