Design for Living Noël Coward,2023-05-04 Its fusion of passion and mischief remains striking and there is something undeniably heady about its celebration of a kind of sexual liberation that looks a lot like flippancy - Evening Standard From 1930s bohemian Paris to the dizzying heights of Manhattan society, a tempestuous love triangle unravels between a vivacious interior designer, Gilda, playwright Leo and artist Otto - three people unashamedly and passionately in love with each other. But can such a lavish love affair survive the real world? Exploring themes of bisexuality, celebrity, success and self-obsession, Design for Living is a stylish and scandalous comedy, that is often revered as Coward's most controversial and risqué work. This new edition is published in Methuen Drama's iconic Modern Classics series to coincide with the 50th anniversary of Coward's death and features a new introduction by Oliver Soden.

Molecular Pathology of Hematolymphoid Diseases Cherie H. Dunphy,2010-06-16 The past two decades have seen an ever-accelerating growth in knowledge about molecular pathology of human diseases, which received a large boost with the sequencing of the human genome in 2003. Molecular diagnostics, molecular targeted therapy and genetic therapy, are now routine in many medical centers. The molecular field now impacts every field in medicine, whether clinical research or routine patient care. There is a great need for basic researchers to understand the potential clinical implications of their research whereas private practice clinicians of all types (general internal medicine and internal medicine specialists, medical oncologists, radiation oncologists, surgeons, pediatricians, family practitioners), clinical investigators, pathologists and medical laboratory directors and radiologists require a basic understanding of the fundamentals of molecular pathogenesis, diagnosis, and treatment for their patients. Traditional textbooks in molecular biology deal with basic science and are not readily applicable to the medical setting. Most medical textbooks that include a mention of molecular pathology in the clinical setting are limited in scope and assume that the reader already has a working knowledge of the basic science of molecular biology. Other texts emphasize technology and testing procedures without integrating the clinical perspective. There is an urgent need for a text that fills the gap between basic science books and clinical practice. In the Molecular Pathology Library series, the basic science and the technology is integrated with the medical perspective and clinical application.

Basic and Clinical Immunology by Names Michael R. Shurin,Galina V. Shurin,Ken M. Shurin,2022-12-19 Hundreds of eponyms are used within the field of immunology—Petri dish, Crohn’s disease, Bence Jones protein, Kupffer cells, Freund's adjuvant, Ouchterlony immunodiffusion, to name just a few—but most of us don’t know much about the individuals who gave their names to these terms. Where were they born and educated, what other accomplishments are they credited with, why has history chosen to remember them, or not? This book presents the first comprehensive collection of immunologic eponyms, and through them tells the story of this fascinating field, from its earliest beginnings to present day. Organized by surname and meticulously cross-referenced and indexed, this book offers historical anecdotes and little-known facts which scientists, clinicians, students, and general readers will find captivating and memorable. A one-of-a-kind introduction to immunology that serves as both a history lesson and current reference on the diseases, treatments, and individuals who

have been crucial to this field.

Dendritic Cells in Fundamental and Clinical Immunology Eduard W. A. Kamperdijk,Paul Nieuwenhuis,Elizabeth C.M. Hoefsmit,2012-12-06 These Proceedings contain the contributions of the participants of the Second International Symposium on Dendritic Cells that was held from the 1st to 25th of June 1992 in Amsterdam, the Netherlands. The First International Symposium on Dendritic Cells was organized as a Satellite symposium at the occasion of the 30th anniversary of the Japanese Reticuloendothelial Society by Dr. Y. Imai in Yamagata (Japan), in 1990. It was entitled Dendritic Cells in Lymphoid Tissues, and focused primarily on the Interdigitating Cells (IDC), Epidermal Langerhans cells (LC) and Follicular Dendritic Cells (FDC) , from the point of view of human pathology. However, the concept of Dendritic Cell System, comprising the bone marrow derived IDC and LC but not the FDC, was based on animal experiments and mainly on in vitro experiments on isolated cells. In a report from the Reticuloendothelial Society Committee on Nomenclature in 1982, Tew, Thorbecke and Steinman had already characterized these different types of DC, but the gap between in vivo and in vitro function remained. In Amsterdam, the Symposium focused on the Role of Dendritic Cells in Fundamental and Clinical Immunology. First, recent developments in molecular biology of antigen presentation and cell biological aspects of signal transduction were discussed, in relation to the potential of DC to stimulate lymphocytes and to trigger their in vitro differentiation.

Playthings Michelle Birbeck,2014-06 Finding someone to play with is difficult enough when killing them can mean going to jail. But that doesn't stop this serial killing duo. They've been killing together for years, selecting victims and covering each others' backs. But now one of them has broken the rules, leaving the other wanting for blood.

Denshi Kenbikyo Gakkai Shi: Kikan ,2008

Dendritic Cells in Fundamental and Clinical Immunology Jacques Banchereau,Daniel Schmitt,2012-12-06 These Proceedings contain the contributions of the participants of the Third International Symposium on Dendritic Cells that was held in Annecy, France, from June 19 to June 24, 1994. This symposium represented a follow-up of the first and second international symposia that were held in Japan in 1990 and in the Netherlands in 1992. Dendritic cells are antigen-presenting cells, and are found in all tissues and organs of the body. They can be classified into: (1) interstitial dendritic cells of the heart, kidney, gut, and lung;(2) Langerhans cells in the skin and mucous membranes; (3) interdigitating dendritic cells in the thymic medulla and secondary lymphoid tissue; and (4) blood dendritic cells and lymph dendritic cells (veiled cells). Although dendritic cells in each of these compartments are all CD45+ leukocytes that arise from the bone marrow, they may exhibit differences that relate to maturation state and microenvironment. Dendritic cells are specialized antigen-presenting cells for T lymphocytes: they process and present antigens efficiently in situ, and stimulate responses from naive and memory T cells in the paracortical area of secondary lymphoid organs. Recent evidence also demonstrates their role in induction of tolerance. By contrast, the primary and secondary B-cell follicles contain follicular dendritic cells that trap and retain intact antigen as immune complexes for long periods of time. The origin of follicular dendritic cells is not clear, but most investigators believe that these cells are not leukocytes.

The Fall Guys (Revised Edition) Gerry Rose,2023-02-09 It is the Autumn of 1981 and British Prime Minister, following the ending of the Maze Prison Hunger Strike, finds her Cabinet facing a new and more dangerous threat from an Irish Republican splinter group demanding the unification of Ireland. As she and her government prepare for the State Opening of Parliament, to be attended by the Royal Family including Prince Charles and his new bride Princess Diana, there ensues a frantic race against time to stop a team of international assassins from wreaking havoc and revenge at the very heart of the British establishment.

Epidermal Langerhans Cells Gerold Schuler,1990-12-26 Epidermal Langerhans Cells focuses on epidermal Langerhans cells (LCs) and the important role they play in the induction of contact hypersensitivity and graft rejection. This in-depth work discusses how these antigen-presenting cells are modulated by various physicochemical agents (such as UV light) and how they can be infected by the AIDS virus. It also reveals that cytokines mediate their development into potent T cell-stimulatory dendritic cells. This comprehensive review covers important experimental details and methods, and fascinating information on LCs. It also provides an overview of the immune system as it relates to the skin in health and disease. This up-to-date publication is an indispensable resource for all investigative and clinical dermatologists, as well as immunologists interested in antigen-presenting cells.
