Rare Metal Technology 2020 Gisele Azimi,Kerstin Forsberg,Takanari Ouchi,Hojong Kim,Shafiq Alam,Alafara Abdullahi Baba,2020-01-20 This collection presents papers from a symposium on extraction of rare metals as well as rare extraction processing techniques used in metal production. Rare metals include strategic metals that are in increasing demand and subject to supply risks. Metals represented include neodymium, dysprosium, scandium and others; platinum group metals including platinum, palladium, iridium, and others; battery related metals including lithium, cobalt, nickel, and aluminum; electronics-related materials including copper and gold; and refractory metals including titanium, niobium, zirconium, and hafnium. Other critical materials such as gallium, germanium, indium and silicon are also included. Papers cover various processing techniques, including but not limited to hydrometallurgy (solvent extraction, ion exchange, precipitation, and crystallization), electrometallurgy (electrorefining and electrowinning), pyrometallurgy, and aerometallurgy (supercritical fluid extraction). Contributions are focused on primary production as well as secondary production through urban mining and recycling to enable a circular economy. A useful resource for all involved in commodity metal production, irrespective of the major metal Provides knowledge of cross-application among industries Extraction and processing of rare metals that are the main building block of many emerging critical technologies have been receiving significant attention in recent years. The technologies that rely on critical metals are prominent worldwide, and finding a way to extract and supply them effectively is highly desirable and beneficial.

Waves and Mean Flows Oliver Bühler,2009-08-20 A modern account of the nonlinear interactions between waves and mean flows such as shear flows and vortices. It can be used as a fundamental reference, a course text, or by geophysicists and physicists needing an introduction to this important area in fundamental fluid dynamics and atmosphere-ocean science.

Volume Therapy Johannes Treib,2012-12-06 Volume therapy or infusion therapy is used worldwide for the treatment of hypovolemia caused by surgical blood and plasma losses, trauma, burns, or infections. Interestingly, significant differences exist between countries regarding the use of plasma substitutes. In the United States, crystalloids and albumin are more popular, whereas in Europe artificial colloids such as hydroxyethyl starch are preferred. From an international perspective, it is notable that volume therapy using hydroxyethyl starch is an established therapy for the treatment of cerebral, retinal, otogenic, and peripheral circulation disorders in Germany. In other countries, crystalloids are mostly used to treat dehydration or hypovolemia, for example in brain stroke. In recent years, new data made it possible to overcome national differences and agree on an evidence-based, international consensus. The efficacy of different plasma substitutes for a volume therapy lasting several days has not been sufficiently studied in the past. Long-term volume therapy of patients with cerebral perfusion disorders is an excellent model for studying the effects of artificial colloids in detail, because of the high doses of colloids that are administered. Through a comparison of commonly used plasma substitutes, we were able to show that significant differences exist between different colloids, for example in their effect on coagulation. After repeated infusion, hydroxyethyl starches that are difficult to degrade lead to an accumulation of large molecules that are difficult to eliminate. These large molecules impair factor VIII/von Willebrand factor.

Commercial Aircraft Projects Hans-Henrich Altfeld,2016-09-19 When it comes to very highly complex, commercially funded product-development projects it is not sufficient to apply standard project management techniques to manage and keep them under control. Instead, they need a project management approach which is perfectly adapted to their complex nature. This, however, may generate additional cost and a dilemma arises because in commercially-driven product developments there is the natural tendency to limit the management-related costs. The development of a new commercial aircraft is no exception. In fact, it can be regarded as an extreme example of this kind of project. This is why it is especially useful to analyse the project management capabilities and practices needed to manage them. Cost reductions can still be achieved by concentrating on the essential elements of some project management disciplines, to maintain their principal strengths, and combining them in a pragmatic way on the basis of an integrated architecture. This book goes beyond descriptions of management disciplines found elsewhere in its treatment of the architecture integration necessary to interlink product, process and resources data. Only with this connectedness can the interoperation of the management essentials yield maximum efficiency and effectiveness. Commercial Aircraft Projects: Managing the Development of Highly Complex Products proposes an integrated architecture and details, step-by-step, how it can be used for the management of commercial aircraft development projects. The findings can also be applied to other industrial sectors that produce complex hardware based on design inputs.

Self-organising Software Giovanna Di Marzo Serugendo,Marie-Pierre Gleizes,Anthony Karageorgos,2011-09-15 Self-organisation, self-regulation, self-repair and self-maintenance are promising conceptual approaches for dealing with complex distributed interactive software and information-handling systems. Self-organising applications dynamically change their functionality and structure without direct user intervention, responding to changes in requirements and the environment. This is the first book to offer an integrated view of self-organisation technologies applied to distributed systems, particularly focusing on multiagent systems. The editors developed this integrated book with three aims: to explain self-organisation concepts and principles, using clear definitions and a strong theoretical background; to examine how self-organising behaviour can be modelled, analysed and systematically engineered into agent behaviour; and to assess the types of problems that can be solved using self-organising multiagent systems. The book comprises chapters covering all three dimensions, synthesising up-to-date research work and the latest technologies and applications. The book offers dedicated chapters on concepts such as self-organisation, emergence in natural systems, software agents, stigmergy, gossip, cooperation and immune systems. The book then explains how to engineer artificial self-

organising software, in particular it examines methodologies and middleware infrastructures. Finally, the book presents diverse applications of self-organising software, such as constraint satisfaction, trust management, image recognition and networking. The book will be of interest to researchers working on emergent phenomena and adaptive systems. It will also be suitable for use as a graduate textbook, with chapter summaries and exercises, and an accompanying website that includes teaching slides, exercise solutions and research project outlines. Lectures on Lie Groups Wu Yi Hsiang,2000 This invaluable book provides a concise and systematic introduction to the theory of compact connected Lie groups and their representations, as well as a complete presentation of the structure and classification theory. It uses a non-traditional approach and organization. There is a proper balance between, and a natural combination of, the algebraic and geometric aspects of Lie theory, not only in technical proofs but also in conceptual viewpoints. For example, the orbital geometry of adjoint action, is regarded as the geometric organization of the totality of non-commutativity of a given compact connected Lie group, while the maximal tori theorem of \mathfrak{g} . Cartan and the Weyl reduction of the adjoint action on G to the Weyl group action on a chosen maximal torus are presented as the key results that provide a clear-cut understanding of the orbital geometry.

Economic Transformation for Poverty Reduction in Africa Almas Heshmati,2019-04-05 This book is an edited volume which contains empirical studies on determinants of poverty and its reduction in Africa. It looks at multidimensional measures of poverty, production and productivity-related factors, policies influencing poverty and random, hazardous but preventive factors influencing poverty levels and their reduction. The book argues that we need to account for different dimensions of poverty, when it is measured and classified, and for identifying the determinants of poverty and factors reducing poverty. The studies in the volume provide readers with a comprehensive picture of the state of poverty, its measurement, causal factors and efficient policies and practices in poverty reduction on the African continent as a whole and also in selected countries.
