Islamic Ethics of Technology Amana Raquib, 2015-04-10 This book approaches the question of technology from an Islamic ethical perspective. The book tries to broaden the scope of the Sharia to deal comprehensively with the ethical questions and dilemmas that arise in the midst of a postmodern technological culture due to the absence of well-defined religious-ethical ends. It looks at the maqasid as a universal ethical theory to be interpreted and applied in the global technological context. It weaves the contemporary philosophical analysis of technology within the maqasid discourse and assesses modern technology through the lens of the ultimate aims and purposes of the Sharia. It works out the relationship between the various objectives and how they can be developed into an Islamic ethics of technology. Following in the recent interest in the objectives of the Sharia, the book further expands the scope of the maqasid and carries it further to encompass metaphysical and ethical debates surrounding technology. Anyone interested in finding alternatives to the existing technological model will find this book valuable. Specifically those interested in Islam and Modern World and how ijihad is being undertaken to tackle contemporary ethical problems will find this book helpful.

Islamic Perspectives on Science and Technology

Mohammad Hashim Kamali, Osman Bakar, Daud Abdul-Fattah Batchelor, Rugayah Hashim, 2016-04-25 This book presents 25 selected papers from the International Conference on "Developing Synergies between Islam & Science and Technology for Mankind's Benefit" held at the International Institute for Advanced Islamic Studies Malaysia, Kuala Lumpur, in October 2014. The papers cover a broad range of issues reflecting the main conference

themes: Cosmology and the Universe, Philosophy of Science and the Emergence of Biological Systems, Principles and Applications of Tawhidic Science, Medical Applications of Tawhidic Science and Bioethics, and the History and Teaching of Science from an Islamic Perspective. Highlighting the relationships between the Islamic religious worldview and the physical sciences, the book challenges secularist paradigms on the study of Science and Technology. Integrating metaphysical perspectives of Science, topics include Islamic approaches to S&T such as an Islamic epistemology of the philosophy of science, a new quantum theory, environmental care, avoiding wasteful consumption using Islamic teachings, and emotional-blasting psychological therapy. Eminent contributing scholars include Osman Bakar, Mohammad Hashim Kamali, Mehdi Golshani, Mohd. Kamal Hassan, Adi Setia and Malik Badri. The book is essential reading for a broad group of academics and practitioners, from Islamic scholars and social scientists to (physical) scientists and engineers.

The Different Aspects of Islamic Culture ,2001

The Oxford Encyclopedia of Philosophy, Science, and Technology in Islam Salim Ayduz, Caner Dagli, 2014 The Oxford Encyclopedia of Philosophy, Science and Technology in Islam (OEPSTI) builds upon the celebrated Oxford Encyclopedia of the Islamic World and brings together the rich history of philosophical and scientific disciplines in Islam over the last fourteen centuries.-- Preface, v. 1, p. xvii.

Islam and Science, Medicine, and Technology Sally Ganchy, 2009-01-15 Radiating outwards from the Arabian Peninsula, the Islamic world would spread to Africa, India, southeast Asia, Europe, China, and the steppes of Russia. At the height of the empire's strength and extent, a period known as the "Golden Age," Muslim achievement in all areas of culture was unsurpassed worldwide. In the fields of science, medicine, and

technology, in particular, the Islamic world shined brightly in a world often darkened by ignorance and incomprehension. The efforts of Muslim scientists, mathematicians, astronomers, doctors, and engineers transformed the Islamic world and ultimately helped stimulate the European Renaissance, prompting a rediscovery of the ancient world that would revolutionize arts, science, and philosophy, and so transform the world.

Studies in Medieval Islamic Technology Donald R.

Hill, 2020-10-07 These studies represent the major contributions to the history of Islamic technology during the second half of the 20th century beside Donald Hill's separate publications on the mechanical devices of Pseudo-Apollonios, the Banu Musa and al-Jazari. A gifted linguist who was trained as a historian of Islamic civilisation, and also a professional engineer, Hill achieved his goal of setting his subject on a solid basis. The papers reprinted here include his early studies of the trebuchet and the camel and horse, several overviews of different aspects of Islamic technology, articles on specific topics such as the Cairo Nilometer and al-Biruni's geared luni-solar device, and the first notice of an extremely important Andalusian treatise on mechanical devices discovered in 1975.

Development of Science & Technology in Islamic History

Shabeer Ahmed, 2015-11-10 The spectacular advances in science and technology that have occurred over the last century have led some to believe that only Western Capitalism can produce material progress. Does religion hinder man's progress in life? Is there a contradiction between Islam and science? Why are the countries of the Islamic world so technologically backward? Is Islam capable of addressing man's diverse problem in the 21st century? This book tackles these questions by exploring the relationship between Islam and science, by examining how science bloomed under Islam while Europe struggled in the Dark Ages and by illustrating a distinct vision for future scientific and technological advancement under the Islamic State.

iMuslims Gary R. Bunt,2009-04-30 Exploring the increasing impact of the Internet on Muslims around the world, this book sheds new light on the nature of contemporary Islamic discourse, identity, and community. The Internet has profoundly shaped how both Muslims and non-Muslims perceive Islam and how Islamic societies and networks are evolving and shifting in the twenty-first century, says Gary Bunt. While Islamic society has deep historical patterns of global exchange, the Internet has transformed how many Muslims practice the duties and rituals of Islam. A place of religious instruction may exist solely in the virtual world, for example, or a community may gather only online. Drawing on more than a decade of online research, Bunt shows how social-networking sites, blogs, and other cyber-Islamic environments have exposed Muslims to new influences outside the traditional spheres of Islamic knowledge and authority. Furthermore, the Internet has dramatically influenced forms of Islamic activism and radicalization, including jihad-oriented campaigns by networks such as al-Qaeda. By surveying the broad spectrum of approaches used to present dimensions of Islamic social, spiritual, and political life on the Internet, iMuslims encourages diverse understandings of online Islam and of Islam generally.

Science & Technology in the Golden Age of the Muslim World Atowar Rahman,2018

Technology, Tradition and Survival Richard Tapper,Keith McLachlan,2004-11-23 The contributors address the history, originality, variety and sophistication of traditional science, technology and material culture in the Middle East and Central Asia, their influence on the history of Europe and the West, and the threat posed by modern Western technologies.

Islamization of Attitudes and Practices in Science & Technology M. A. K. Lodhi,1989 This book is a compilation of selected papers presented at the Workshop on the Islamization of

Attitudes and Practices in Science and Technology. (1408-1987). Sponsored by the Association of Muslim Scientists and Engineers (AMSE) and the International Institute of Islamic Thought (IIIT), this pioneering workshop emphasized the Islamization of attitudes and practices in the natural sciences. Until recently studies on Islamization concentrated primarily on the social sciences and humanities. This book focused on the problems and challenges of attitudes and practices in science and technology with respect to ideology, personality, education and environment of the Muslim scientists in the contemporary world. This work includes M.A.K. Lodhi's *The Making of a Scientist: The Islamizing of a Muslim Scientist*; Syed M. Amir's *science Research in Muslim countries*; S. H. Durrani's *incorporation of Islamic Values in the Administration of a Science Research Institute*; and M. Mazhar Hussaini's *'Attitudes and Practices in Food Nutritional Sciences*. Other highlights include *The Islamic Basis of the Coming Muslim Technological Renaissance* by Ali Kyrala and *Islamization of Attitude and Practice in Embryology* by Ibrahim B. Syed. In all, thirteen prominent scholars share their valuable insights on their respective disciplines in this book. We hope that both Muslim and non-Muslim scholars will find their work to be a valuable source of critical observations and profound germinal concepts for future development.

Introduction to Muslim Contributions to Science and Technology M. M. Qurashi, International Islamic University (Islāmābād, Pakistan), 1998

Islamic Thought in the Rise and Supremacy of Islamic Technological Culture S. Waqar Ahmed Husaini, 2001 *Islamic Thought in the Rise and Supremacy of Islamic Technological Culture: Water Resources and Energy*, brings out the role of Islamic ideological culture in the birth, rise, and world supremacy of Islamic technological culture during the First to Eighth AH (Seventh to Fourteenth AD) centuries. Examples are given from the history of water resources and energy. Islamic ideology refers to implications for the two cultures of the Quranic concept of God and prophethood; the Kitab al-Kharaj books on the Traditions of Prophet Muhammad; Islamic law, esp. land tenure and environmental laws; economics; politics and administration; etc. The primary beneficiaries of these Islamic cultures during the early centuries, when Muslims were a minority in the Islamic world-states, were the non-Muslim majorities; the latter, therefore, embraced Islam first gradually and later on rapidly. The book presents the way to revive the Islamic ideological and technological cultures through a critique of the two main causes for the decline and continued backwardness of Muslim cultures: Sufism; and takhsis, i.e., reduction, limitation, restriction of Islamic law to only family laws; Islam to rituals and superficial aspects of the five pillars ; exclusion of Islamic science, technology, economics, etc. from Islamic epistemology and education; and

other manifestations of takhsis.
