Chemical Recognition in Biology F. Chapeville,A. L. Haenni,2012-12-06 Studies of chemical recognition in biology were initiated about half a century ago with the first kinetic data obtained on enzyme catalysis and inhibition. They led to a rather static representation of the recognition process illustrated by the lock and key model that still continues to influence our overall image of recognition and its specificity. In several cases, crystallographic studies of enzyme-substrate complexes have supported this model. Indeed, in a crystallized ligand-enzyme complex, a close fitting is observed between the active center of the enzyme and the functional groups of the ligand. However, this does not necessarily result from a direct recognition process between rigid structures, but may result from a progressive adaptation during which the initial structures of the enzyme and the ligand are modified (induced-fit mechanism). Recently, a great deal of work has been devoted to the study of recognition in more complex systems such as the replication or the translation machines; clearly, the extraordinary precision of such systems cannot be explained solely in terms of physical matching between enzymes and their substrates. This has led to a noticeable change of perspective in these areas. As a result of the new kinetic viewpoint, one rather focuses on the time-course of the processes, on the kinetic balance between steps of the reaction, on the energy-accuracy relationships and on the strategies which permit the achievement of high precision using relatively error-prone components in an appropriate dynamic interplay.

Ribosomes Structure, Function, and Dynamics Marina V. Rodnina,Wolfgang

Wintermeyer,Rachel Green,2011-12-10 The ribosome is a macromolecular machine that synthesizes proteins with a high degree of speed and accuracy. Our present understanding of its structure, function and dynamics is the result of six decades of research. This book collects over 40 articles based on the talks presented at the 2010 Ribosome Meeting, held in Orvieto, Italy, covering all facets of the structure and function of the ribosome. New high-resolution crystal structures of functional ribosome complexes and cryo-EM structures of translating ribosomes are presented, while partial reactions of translation are examined in structural and mechanistic detail, featuring translocation as a most dynamic process. Mechanisms of initiation, both in bacterial and eukaryotic systems, translation termination, and novel details of the functions of the respective factors are described. Structure and interactions of the nascent peptide within, and emerging from, the ribosomal peptide exit tunnel are addressed in several articles. Structural and single-molecule studies reveal a picture of the ribosome exhibiting the energy landscape of a processive Brownian machine. The collection provides up-to-date reviews which will serve as a source of essential information for years to come.

Keeping the Dream Alive Dan Azoulay, 1997-07-30 Azoulay delineates the central themes and determining factors of the party's development during the 1950s and early 1960s. The CCF/NDP had to contend with not only a booming postwar economy and a very popular premier but also a Cold War-induced phobia toward the Left and serious intraparty divisions. Despite this the party slowly recovered, led by a core of dedicated activists and employing an array of strategies, including the much-publicized transformation of the CCF into the NDP in the early 1960s. The author counters allegations that the CCF/NDP opportunistically abandoned its essential qualities (such as its socialist ideology or democratic structure) for the sake of electoral gain and that organized labour played a leading role in the party in these years, contributing to the dilution of the movement. Although the party sought new alliances among the province's less privileged groups, especially organized labour, it did so cautiously and even hesitantly, always conscious of the need to preserve its basic identity.

The Happy Warrior Donald C. MacDonald, 1998-09-01 This revised and expanded edition provides an inside look at provincial politics in Ontario through the eyes of the 17-year leader of the Ontario CCF/NDP.

Molecular Machines Benoît Roux, 2011 Molecular machines are complex biomolecules (protein, DNA, RNA and carbohydrates) that consume energy in order to perform specific functions. To understand how these systems perform their functions, it is necessary to have detailed knowledge of the conformational states of these molecular machines, as well as the reaction pathways connecting them. Many of these conformational transitions take place on a timescale that is far beyond what is attainable with current molecular dynamics simulations on large and complex systems. On the other hand, experimental methods are often unable to detect the short-lived transient features occurring during such conformational transitions. Thus, breaking new ground toward a complete knowledge of the reaction pathways of molecular machines requires a novel paradigm permitting a seamless integration of structural, dynamical and functional data among existing theories, models and simulations. This review volume provides the most updated summary on the cutting-edge research of many molecular machines, ranging from ATPase, DNA polymerase, ribosome, calcium pump, chloride channel, neurotransmitters transporter, chaperon GroEL for protein folding, microtubules and chromatin, voltage-gating proteins, membrane fusion snare proteins, actin and myosin, DNA base flipping enzymes and proteins that are responsible for our immune system. It contains results from both theoretical and experimental fronts, thus giving students and researchers in biosciences a pedagogically integrated picture of this critical network that we called Life.

Political Corruption in Canada Kenneth M. Gibbons, Donald Cameron Rowat, 1976 Canadians assume that their politicians and institutions are relatively free of the corruption they associate with other nations. The editors of this volume argue that this questionable supposition is based on scant evidence and very little serious analysis.

Translation Initiation: Reconstituted Systems and Biophysical Methods, 2007-10-09 For over fifty years the Methods in Enzymology series has been the critically acclaimed laboratory standard and one of the most respected publications in the field of biochemistry. The highly relevant material makes it an essential publication for researchers in all fields of life and related sciences. This volume, the second of three on the topic of Translation Initiation includes articles written by leaders in the field.

Comprehensive Natural Products II, 2010-03-05 This work presents a definitive interpretation of the current status of and future trends in natural products—a dynamic field at the intersection of chemistry and biology concerned with isolation, identification, structure elucidation, and chemical characteristics of naturally occurring compounds such as pheromones, carbohydrates, nucleic acids, and enzymes. With more than 1,800 color figures, Comprehensive Natural Products II features 100% new material and complements rather than replaces the original work (©1999). The book consists of papers discussing a wide range of subjects on pure and applied chemistry The compendium has papers that deal with sequences in nucleic acids, the structure and synthesis of a tyrosine transfer RNA gene, and fragments of phenylalanine and serine specific transfer ribonucleic acids. The text also presents papers covering topics on the chemistry of some mycotoxins, essential fatty acids and prostaglandins, and Organic - inorganic systems for the chemical modification of molecular nitrogen under mild conditions. Chemists will find the book highly interesting.

Structural Aspects of Protein Synthesis Mans Ehrenberg,Anders Liljas,2013-06-06 This highly illustrated book provides an up-to-date description of the structure and function of the translation system including ribosomes, tRNAs, translation factors, antibiotics and aminoacyl-tRNA synthetases. Research on translation is undergoing rapid changes and is receiving significant attention as evidenced by the Nobel Prize in Chemistry 2009. The structural research by crystallography and cryo-EM forms part of an interactive framework that involves biochemistry and molecular computation. The book provides a comprehensive overview of translation in light of the structural results. It is a valuable resource for scientists in this and related fields, as well as for students taking courses with a focus on translation. There is no other book in this field currently except the previous edition of this book. The authors have for a long time worked in the field of structure and function of the translation system.Contents: The Basics of TranslationHistorical MilestonesMethods of Studying StructureThe Message ? mRNAThe Adaptor ? tRNAThe Workbench ?
