Learning Design Rob Koper, Colin Tattersall, 2005-02-18 E-learning is still in its infancy. This can be seen both in the limited pedagogical quality and lack of portability of e-learning content, and in the lack of user-friendly tools to exploit the opportunities offered by current technologies. To be successful, e-learning must offer effective and attractive courses and programmes to learners, while at the same time providing a pleasant and effective work environment for staff members who have the task to develop course materials, plan the learning processes, provide tutoring, and assess performance. To overcome these deficiencies, the IMS Global Learning Consortium Inc. released the Learning Design Specification in 2003. With Learning Design it is possible to develop and present advanced, interoperable e-learning courses embracing educational role and game playing methods, problem-based learning, learning community approaches, adaptivity and peer coaching and assessment methods. In this handbook Koper and Tattersall have put together contributions from members of the Valkenburg Group, consisting of 33 experts deeply involved in e-learning and more specifically learning design. The result is a rich and lasting source of information for both e-learning course and tool developers, providing information about the specification itself, how to implement it in practice, what tools to use, and what pitfalls to avoid. The book not only reports first experiences, but also goes beyond the current state of the art by looking at future prospects and emerging applications.

Integrated E-Learning Wim Jochems, Rob Koper, Jeroen Van Merriënboer, 2004-03-01 It is widely recognized that online and e-learning is no longer an exclusive approach used only in distance education and in isolation from traditional education programmes. A real difficulty facing educators and trainers is how to integrate these new learning methods and embed them in established and existing forms of learning, teaching or training. This book forms a serious, in-depth study of the subject and proposes that e-learning is not simply a matter of 'digitizing' traditional materials, but involves a new approach, which must take into account pedagogical, technological and organizational features to form a well-designed education system. A practical focus is maintained throughout, with advice on implementation and case studies drawn from the contributors' considerable experience. Integrated E-Learning is essential reading for anyone wanting to implement, design, develop or deliver e-learning or training courses.

Managing Children with Developmental Language Disorder James Law, Cristina McKean, Carol-Anne Murphy, Elin Thordardottir, 2019-04-09 Although most children learn language relatively quickly, as many as 10 per cent of them are slow to start speaking and are said to have developmental language disorder (DLD). Children with DLD are managed by a variety of different professionals in different countries, are offered different services for different periods of time and are given a variety of different therapeutic treatments. To date, there has been no attempt to evaluate these different practices. Managing Children with Developmental Language Disorder: Theory and Practice Across Europe and Beyond does just this, reporting on the findings of a survey carried out as part of the work of COST Action IS1406, a European research network. Law and colleagues analyse the results of a pan-European survey, looking at how different services are delivered in different countries, at the cultural factors underpinning such services and the theoretical frameworks used to inform practice in different countries. The book also provides a snapshot of international practices in a set of 35 country-specific vignettes, providing a benchmark for future developments but also calling attention to the work of key practitioners and thinkers in each of the countries investigated. This book will be essential reading for practitioners working with children with language impairments, those commissioning services and policy in the field and students of speech and language therapy.

Virtual University? Henk van der Molen, 2001 Higher education institutions around the world are experimenting with many different types of virtual learning environments. This book argues that information and communication technologies will have a major impact on teaching and learning and universities should have a strategy to meet this change. It posits that institutions and individuals will not be able to individually obtain the best advantages from these new technologies, that there is need for specialization and cooperation. Experiences with Internet learning indicate that students, as well as teachers, have to accept patterns quite different from the traditional teaching-learning pattern. Traditional university staff may resist these changes, but institutions which do not adjust to the new opportunities are likely to shrink or even disappear.

Merchants of Doubt Naomi Oreskes, Erik M. Conway, 2011-10-03 The U.S. scientific community has long led the world in research on such areas as public health, environmental science, and issues affecting quality of life. These scientists have produced landmark studies on the dangers of DDT, tobacco smoke, acid rain, and global warming. But at the same time, a small yet potent subset of this community leads the world in vehement denial of these dangers. Merchants of Doubt tells the story of how a loose-knit group of high-level scientists and scientific advisers, with deep connections in politics and industry, ran effective campaigns to mislead the public and deny well-established scientific knowledge over four decades. Remarkably, the same individuals surface repeatedly-some of the same figures who have claimed that the science of global warming is not settled denied the truth of studies linking smoking to lung cancer, coal smoke to acid rain, and CFCs to the ozone hole.

Doubt is our product, wrote one tobacco executive. These experts supplied it. Naomi Oreskes and Erik M. Conway, historians of science, roll back the rug on this dark corner of the American scientific community, showing how ideology and corporate interests, aided by a too-compliant media, have skewed public understanding of some of the most pressing issues of our era.

Nigeria's University Age Tim Livsey,2017-11-13 This book explores the world of Nigerian universities to offer an innovative perspective on the history of development and decolonisation from the 1930s to the 1960s. Using political, cultural and spatial approaches, the book shows that Nigerians and foreign donors alike saw the nation's new universities as vital institutions: a means to educate future national leaders, drive economic growth, and make a modern Nigeria. Universities were vibrant places, centres of nightlife, dance, and the construction of spectacular buildings, as well as teaching and research. At universities, students, scholars, visionaries, and rebels considered and contested colonialism, the global Cold War, and the future of Nigeria. University life was shaped by, and formative to, experiences of development and decolonisation. The book will be of interest to historians of Africa, empire, education, architecture, and the Cold War.
