**A Respectable Spell** Carlos Sandroni,2021-11-16 A landmark in Brazilian music scholarship, A Respectable Spell introduces English-speaking readers to the rich history of samba from its nineteenth century origins to its emergence as a distinctive genre in the 1930s. Merging storytelling with theory, Carlos Sandroni profiles performers, composers, and others while analyzing the complex ideologies their music can communicate in their lyrics and rhythms, and how the meaning of songs and musical genres can vary depending on social and historical context. He also delves into lundu, modinha, maxixe, and many other genres of Brazilian music; presents the little-heard voices and perspectives of marginalized Brazilians like the African-descended sambistas; and presents a study in step with the types of decolonial approaches to ethnomusicology that have since emerged, treating the people being studied not only as makers of music but also of knowledge. Incisive and comprehensive, A Respectable Spell tells the compelling story of an iconic Brazilian musical genre.

Humanities Lawrence Boudon,2005-02-01 The one source that sets reference collections on Latin American studies apart from all other geographic areas of the world.... The Handbook has provided scholars interested in Latin America with a bibliographical source of a quality unavailable to scholars in most other branches of area studies. —Latin American Research Review Beginning with volume 41 (1979), the University of Texas Press became the publisher of the Handbook of Latin American Studies, the most comprehensive annual bibliography in the field. Compiled by the Hispanic Division of the Library of Congress and annotated by a corps of more than 130 specialists in various disciplines, the Handbook alternates from year to year between social sciences and humanities. The Handbook annotates works on Mexico, Central America, the Caribbean and the Guianas, Spanish South America, and Brazil, as well as materials covering Latin America as a whole. Most of the subsections are preceded by introductory essays that serve as biannual evaluations of the literature and research under way in specialized areas. The Handbook of Latin American Studies is the oldest continuing reference work in the field. Lawrence Boudon, of the Library of Congress Hispanic Division, has been the editor since 2000, and Katherine D. McCann has been assistant editor since 1999. The subject categories for Volume 60 are as follows: Art History (including ethnohistory) Literature (including translations from the Spanish and Portuguese) Music Philosophy: Latin American Thought

Making Samba Marc A Hertzman,2013-04-01 In November 1916, a young Afro-Brazilian musician named Donga registered sheet music for the song Pelo telefone (On the Telephone) at the National Library in Rio de Janeiro. This apparently simple act—claiming ownership of a musical composition—set in motion a series of events that would shake Brazil's cultural landscape. Before the debut of Pelo telefone, samba was a somewhat obscure term, but by the late 1920s, the wildly popular song had helped to make it synonymous with Brazilian national music. The success of Pelo telefone embroiled Donga in controversy. A group of musicians claimed that he had stolen their work, and a prominent journalist accused him of selling out his people in pursuit of profit and fame. Within this single episode are many of the concerns that animate Making Samba, including intellectual property claims, the Brazilian state, popular music, race, gender, national identity, and the history of Afro-Brazilians in Rio de Janeiro. By tracing the careers of Rio's pioneering black musicians from the late nineteenth century until the 1970s, Marc A. Hertzman revises the histories of samba and of Brazilian national culture.

*Landscape Representations* Jorge Luis P. Oliveira-Costa,Tatiana A. Moreira,Fátima Velez de Castro,2021-05-19 The study of landscapes has become so profound in its approaches that its incursion into society has confronted the scientific community with several 'views' that link a broad path across various academic disciplines. This volume offers essential insights into the concepts and applications of some emerging perspectives in this field. Instead of focusing on only organisms or nature in order to better understand the world and its development, this book places humans and physical aspects at the centre of its focus, combining practical and experimental studies on nonhuman model organisms, ecological and geographical information, nature conservation and territorial planning, and the study of humans and society.

**Advanced Information Networking and Applications** Leonard Barolli,2023-03-14 Networks of today are going through a rapid evolution and there are many emerging areas of information networking and their applications. Heterogeneous networking supported by recent technological advances in low power wireless communications along with silicon integration of various functionalities such as sensing, communications, intelligence and actuations are emerging as a critically important disruptive computer class based on a new platform, networking structure and interface that enable novel, low cost and high volume applications. Several of such applications have been difficult to realize because of many interconnections problems. To fulfill their large range of applications different kinds of networks need to collaborate and wired and next generation wireless systems should be integrated in order to develop high performance computing solutions to problems arising from the complexities of these networks. This volume covers the theory, design and applications of computer networks, distributed computing and information systems. The aim of the volume "Advanced Information Networking and Applications" is to provide latest research findings, innovative research results, methods and development techniques from both theoretical and practical perspectives related to the emerging areas of information networking and applications.

*Recent Advances on Green Concrete for Structural Purposes* Joaquim A.O. Barros,Liberato Ferrara,Enzo Martinelli,2017-05-29 This book is mainly based on the results of the EU-funded UE-FP7 Project EnCoRe, which aimed to characterize the key physical and mechanical properties of a novel class of advanced cement-based materials incorporating recycled powders and aggregates and/or natural ingredients in order to allow partial or even total replacement of conventional constituents. More specifically, the project objectives were to predict the physical and mechanical performance of concrete with recycled aggregates; to understand the potential contribution of recycled fibers as a dispersed reinforcement in concrete matrices; and to demonstrate the feasibility and possible applications of natural fibers as a reinforcement in cementitious composites. All of these aspects are fully covered in the book. The opening chapters explain the material concept and design and discuss the experimental characterization of the physical, chemical, and mechanical properties of the recycled raw constituents, as well as of the cementitious composite incorporating them. The numerical models with potentialities for describing the behavior at material and structural level of constructions systems made by these composites are presented. Finally, engineering applications and guidelines for production and design are proposed.

**Service Robots** Antonio Neves,2018-01-04 The idea of using robots in our daily lives was an inspiring research in the field of robotics during the last decades. Service robots can be found nowadays in warehouses, hospitals, retail stores, city streets, and industrial parks or as personal assistants. The effort on the development of these robots is confirmed by the amount of money invested in projects and companies, the creation on new start-ups worldwide, and, not less important, the quantity and quality of the manuscripts published in journals and conferences worldwide. This book is an

outcome of research done by several researchers who have highly contributed to the field of service robots. The main goal of this book is to present the recent advances in the field of service robots.

**Rome and Provincial Resistance** Gil Gambash,2015-04-10 This book demonstrates and analyzes patterns in the response of the Imperial Roman state to local resistance, focusing on decisions made within military and administrative organizations during the Principate. Through a thorough investigation of the official Roman approach towards local revolt, author Gil Gambash answers significant questions that, until now, have produced conflicting explanations in the literature: Was Rome’s rule of its empire mostly based on oppressive measures, or on the willing cooperation of local populations? To what extent did Roman decisions and actions indicate a dedication towards stability in the provinces? And to what degree were Roman interests pursued at the risk of provoking local resistance? Examining the motivations and judgment of decision-makers within the military and administrative organizations – from the emperor down to the provincial procurator – this book reconstructs the premises for decisions and ensuing actions that promoted negotiation and cooperation with local populations. A ground-breaking work that, for the first time, provides a centralized view of Roman responses to indigenous revolt, Rome and Provincial Resistance is essential reading for scholars of Roman imperial history.

**Biom mineralization Capabilities of Streptomyces Mirabilis P16B-1** Flávio Silva Costa,2023\* Microorganisms thriving in extreme environments have evolved remarkable strategies to cope with harsh conditions, often presenting significant biotechnological potential. Former mining sites, known for their high concentrations of heavy metals and low pH, provide an extreme environment for microbial adaptation. Streptomyces mirabilis P16B-1 was previously isolated from a former uranium mine near Ronneburg, Germany. This strain presents high tolerance to nickel and other heavy metals along with the ability to produce biominerals. The objective of this research was to elucidate the underlying mechanism behind this process. The mineral produced by S. mirabilis P16B-1 was identified as struvite. In the presence of nickel, this metal is incorporated into the mineral structure, forming Ni-struvite. The biomineralization of struvite occurs with limited control by the bacterium over the process. Mineral precipitation was induced due to the increasing concentration of ammonium in the vicinity of the cell as a result of metabolic activity and consequent rise in the pH, thus increasing the supersaturation of the mineral. Moreover, the activity of the nickel exporter NreB in the presence of nickel results in an increased concentration of this metal near the cell, thereby increasing the supersaturation of Ni-struvite. Analyses of the metabolome and secretome of the strain revealed the involvement of organic molecules in the mineralization process. The precipitation of struvite provides advantages to the bacterium, such as immobilization of nutrients like nitrogen and phosphate, which can later be solubilized by the bacterium. Additionally, the precipitation of Ni-struvite adds to the extreme tolerance of this bacterium by immobilizing the metal extracellularly, which also benefits other microorganisms in the environment. This ability to immobilize nickel, coupled with its involvement in nutrient cycling, positions S. mirabilis P16B-1 as an important member of the soil community.
