Selective Neuronal Death Gregory Bock, Maeve

O'Connor, 1987-02-25 Parkinson's disease,
Alzheimer's disease, and motor neuron disease
share a significant common feature: selective
death of neurons in restricted regions of the
brain. This international symposium, held by the
Ciba Foundation in 1986, is the first to bring
together neurophysiologists working on neuronal
death and neuropathologists dealing with human
degenerative brain disease. Participants describe
the causes and sequence of events leading to
neuronal death and discuss what can be done to
prevent it. Among the topics covered are recent
advances in the understanding of agents such as
trophic factors, excitotoxins and poisons that are
known to be involved in neuronal death; examples
of neuronal death during normal development; and
the role played by endocrine mechanisms and
neuronal activity. Also considers trophic factors
controlling the survival of neuronal transplants
and the therapeutic prospects for tissue
transplantation.

Dynamic fracture M.L. Williams,Wolfgang Knauss,2011-10-19 From time to time the International Journal of Fracture has presented matters thought to be of special interest to its readers. In previous special issues (December 1980 and April 1981), Dr H.W. Liu as Guest Editor presented a series of review papers dealing with fatigue processes and characteristics in metals and non-metals. Continuing this policy, which is consistent with our stated objectives, a second review dealing with time dependence in the fracture process, including the effect of material inertia but essentially excluding very strong shock effects in solids, has been assembled under the generic term dynamic fracture. We hope that the ensuing state-of-the-art review will yield an instructive and timely product which readers will find useful. To assist us in presenting this subject, we have prevailed upon a well-known worker in dynamic fracture, Dr W.G. Knauss, Professor of Aeronautics and Applied Mechanics, California Institute of Technology to act as Guest Editor for this special double issue. On behalf of the editors and publisher, I wish to express our indebtedness to Professor Knauss and his invited authors for undertaking this special effort.

Innovations in Mechatronics Engineering José Machado,Filomena Soares,Justyna Trojanowska,Sahin Yildirim,2021-06-15 This book covers a variety of topics in the field of mechatronics engineering, with a special focus on innovative control and automation concepts for applications in a wide range of field, including industrial production,

medicine and rehabilitation, education and transport. Based on a set of papers presented at the 1st International Conference "Innovation in Engineering", ICIE, held in Guimarães, Portugal, on June 28-30, 2021, the chapters report on cutting-edge control algorithms for mobile robots and robot manipulators, innovative industrial monitoring strategies for industrial process, improved production systems for smart manufacturing, and discusses important issues related to user experience, training and education, as well as national developments in the field of mechatronics . This volume, which belongs to a three-volume set, provides engineering researchers and professionals with a timely overview and extensive information on trends and technologies behind the future developments of mechatronics systems in the era of Industry 4.0.

Cross-coupling Reactions Joffrey Vrijdag, 2020
Cross-Coupling Reactions: An Overview opens with an overview of the fundamentals and applications of the young and fast developing area of transition metal catalyzed/mediated oxidative (dehydrogenative) C-H/C-H coupling reactions between two (hetero)arenes. Continuing, the authors highlight the recent advances regarding the ligand supported transition metal-catalyzed domino (cascade) or one-pot syntheses of various heterocycles involving cross-coupling reactions. The recent advances in Cu catalyzed tandem reactions for heterocycle synthesis are also addressed. Cu metal chemistry has garnered attention as a potential alternative to precious transition metals, being cheaper, more sustainable

and more easily available. A comprehensive account of research on green chemical routes is provided, involving various palladium metal-based catalysts utilized in facilitating cross-coupling reaction in aqueous media. Reported decarboxylative cross-coupling reactions are discussed along with suitable examples, focusing on their mechanism of action--
